Electrostatic capacitors are typically described by the type of dielectric used in their construction. The conductors may be discrete as in "Film/Foil" capacitors or may be metalized, deposited or screened. One type of film capacitor has the plastic film deposited onto the aluminum foil conductor.

While most electrostatic capacitors are constructed in a "dry" method, some paper types employ an oil impregnant to improve performance characteristics.

A variety of special combination film and film/paper types are also available. Some are dry and others use an impregnant. Details of these types appear on the manufacturer's data pages.

Ceramic capacitors are available in two distinct styles. One employs a disc or rectangle of a specific ceramic material with the conductors screened on both sides. Some have multiple discs. Monolithic ceramic capacitors are often referred to as "Multilayer." As the name implies, they are made of multilayers of ceramic with appropriate conductors added and finally brought out to terminations with the assembly merged into a "monolithic" block. A variety of physical shapes are available in this type of capacitor as shown in the tables.

Here again the figures shown refer to the page number where product data on this capacitor may be found in EEM.

CAPACITORS, FIXED ELECTROSTATIC

This Capacitor Selection Guide has been prepared by EEM's editorial staff using the data pages which follow in Section 1500 as a base. Only those products which actually appear on the data pages are listed in this Guide.

If, for example, you are searching for an Aluminum Electrolytic Capacitor in a subminiature case with axial leads and polarized, you will find nine (9) manufacturers who can supply this type. The page numbers shown below indicate where data can be found.

The Guide is split into two basic categories: Electrolytic and Electrostatic. Electrolytic capacitors employ a liquid or solid electrolyte as the cathode. Electrostatic capacitors on the other hand have discrete conductors separated by a dielectric material and are generally designated by the specific type of dielectric material as in: Ceramic, Film, Mica, and so forth.

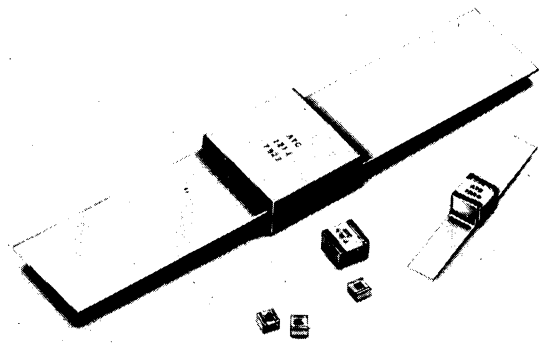
ATC UHF/MICROWAVE CHIP CAPACITORS

American Technical Ceramics, the recognized leader in RF capacitor technology, offers a product line of outstanding quality and reliability to meet the most demanding requirements of the design engineer.

Unique features of construction, enforced by the highest quality control standards, are responsible for the consistent quality and high performance of ATC porcelain and ceramic capacitors. ATC capacitors are available in a wide variety of sizes and styles, and there is a capacitor to meet the requirements of almost any design application.



The severe thermal shock to which capacitors are subjected by direct soldering during circuit assembly can destroy the integrity of conventional capacitors, permitting flux and solvents to penetrate the dielectric. ATC porcelain capacitors have outstanding reliability and ultra-stable performance due to their hermetic, self-encapsulated porcelain construction. Rare metal internal electrodes are molecularly bonded and sealed in a monolith of non-porous porcelain, providing a rugged and hermetic structure that is not degraded by the circuit assembly process. ATC's design of the chip capacitor internal structure has resulted in the most reliable porcelain capacitors available proven by extensive testing programs of approximately 2 million component hours per month.

The ATC barrierCap® termination is now standard on all pellets (pre-tinned capacitors). The terminations remain intact under the most severe thermal shock, and are not dissolved away even by the most careless soldering. They easily withstand a 5 minute submersion in 260°C solder pot without leaching, while retaining complete solderability. Migration is virtually eliminated and a bond strength greater than 30 lbs. is typical for "B" Case capacitors (110 mils square) with nail head leads.

Laser Marking is available on ATC capacitors for quick and complete identification of capacity value and tolerance. This highly legible and permanent marking results in no degradation of performance or reliability and is impervious to all cleaning solvents.

The RF Capacitor Handbook presents over 190 pages of comprehensive detail design considerations and uses for miniature chip and leaded RF capacitors. You'll find theoretical and empirical high-frequency circuit design equations, especially at high RF power levels and frequencies, actual test data at frequencies from 100 MHz to 3 GHz, and practical design methods for increasing gain and power, DC to RF conversion efficiency, bandwidth, transistor lifetime, circuit MTBF, and low-noise performance. Request a copy from your representative or direct from ATC.

MILITARY PRODUCTS

American Technical Ceramics is QPL Listed for the latest established reliability Military Specification for Ceramic Capacitors (MIL-C-55681/4 and /5), and MIL-C-11272/16,/17, and /18, for UHF/Microwave Capacitors.

For MIL-C-55681/4 and /5, the QPL List includes BG (90 ±20 PPM/°C) characteristic (ATC 100 Series), and BP (0 ±30 PPM/°C) characteristic (ATC 700 Series) established reliability. CDR 11, 12, 13, 14, and 21 through 25 styles are available in both temperature characteristics.

For MIL-C-11272/16, /17 and /18, the QPL List includes CY81 through CY89 (ATC 100 Series).

ATC has complete Government approved Hi-Rel testing facilities as well as RF production testing capability through 2.5 GHz.

ATC UHF/MICROWAVE CHIP CAPACITORS

ATC 100 HIGH Q SUPERCHIPS™

UHF/MICROWAVE PORCELAIN CAPACITORS

Ultra High Q even at high ambient temperatures and at extremely high currents. High power operation through microwave frequencies. Extremely low ESR and high dielectric strength.

High self-resonant frequencies.

Low noise figure in receiving systems due to low ESR.

Ultra stable performance assured by hermetic, self-encapsulating porcelain construction.

Capacitance Range:
Case A-0.1 pF to 100 pF to 50 WVDC, standard values per RETMA 5% Table
Case B-0.1 pF to 1000 pF to 500 WVDC, standard values per RETMA 5% Table

IR: 10^6 Megohms Min. @ 25°C, 10^5 Megohms Min. @ 125°C up to and including 470 pF;
10^5 Megohms Min. @ 25°C, 10^4 Megohms Min. @ 125°C, 510 to 1000 pF.

Available in Case A and B Chips, Pellets and Case B Leaded Styles.
QPL Approved, MIL-C-11272, MIL-C-55681.

ATC 175

ULTRA HIGH Q PORCELAIN CAPACITORS

Q is typically four times higher than ATC 100 at Microwave frequencies.

Capacitance Range:
1.0 pF to 100 pF to 500 WVDC, standard values per RETMA 5% Table.

IR: 10^6 Megohms Min. @ 25°C, 10^5 Megohms Min. @ 175°C at rated voltage.

Available in Case B Pellets and Microstrip (MS) leaded.
Military Operating Temperature Range for all Series is −55°C to +125°C.

ATC 200

HIGH CAPACITY CERAMIC CAPACITORS

High packaging density, stable high K chip capacitors for coupling and bypass applications.

Capacitance Range:
Case A, 510 pF to 0.01 MF, 50 WVDC, standard values per RETMA 10% Table.
Case B, 0.005 MF to 0.1 MF, 50 WVDC, standard values per RETMA 10% Table.

IR: 10^4 Megohms Min.

Available in Case A and B Chips, Pellets and Case B Leaded Styles.
DWV: 300% of working voltage.

ATC 700

TEMPERATURE STABLE CERAMIC CAPACITORS

Ultra-stable NPO's with RF characterization.

Capacitance Range:
Case A, 0.1 pF to 1000 pF, 50 WVDC, standard values per RETMA 5% Table.
Case B, 0.1 pF to 5100 pF to 500 WVDC, standard values per RETMA 5% Table.

IR: 10^6 Megohms Min. up to 470 pF;
10^5 Megohms Min. above 470 pF @ 25°C; one-tenth these values @ 125°C.

Available in Case A and B Chips, Pellets and Case B Leaded Styles.
QPL Approved, MIL-C-55681

ATC 111 Millimeter Wavelength Microcaps™

GENERAL SPECIFICATIONS FOR ALL STYLES

ELECTRICAL CHARACTERISTICS

OPERATING FREQUENCY: Up to 50 GHz.
CAPACITANCE VALUES: 0.1 to 1800 pF, 100 WVDC, standard values per RETMA 10% Table.
STANDARD MEASUREMENT FREQUENCY: 1 MHz.
IR: 10^{11} Ohms Min. at 25°C, 10^{10} Ohms Min. at 125°C.

MECHANICAL CHARACTERISTICS

HERMETICITY: The dielectric is virtually unaffected by moisture and commonly used cleaning solvents.

BODY DIMENSIONS

Case Size	S	T	U	X	Y	Z
W = L (Nom.)	.018 (.459)	.025 (.637)	.035 (.889)	.050 (1.27)	.070 (1.78)	.090 (2.29)

1. H is .005 (.127) to .011 (.279); H depends upon actual capacity value.
2. All dimensions are in inches except those in parentheses, which are in mm.

TERMINATION STYLES

	TERM. SUFFIX	MATERIAL
STANDARD	AP	Platinum Gold (Thick Film)
	AC	Gold Over Chromium (Thin Film)
SPECIAL	SP	Platinum Silver (Thick Film)
	AN	Gold Over Nickel (Thin Film)
	HT	Gold Over Base Metals (Thin Film)

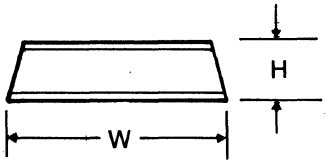
RUGGED CONSTRUCTION to minimize handling problems and circuit assembly problems. Impervious to static discharge failures.

BOND STRENGTH: Exceeds MIL-STD-883B Method 2011.2 for wire bondability of AC terminations.

ENVIRONMENTAL CHARACTERISTICS

OPERATING TEMPERATURE RANGE: −55°C to +125°C.

SHOCK, VIBRATION AND ALTITUDE: Meets or exceeds the requirements of MIL-C-55681.



W = L (i.e., Width = Length)

RECOMMENDED BONDING TECHNIQUES

- Thermocompression, ultrasonic and thermosonic gold wire and aluminum silicon wire bonding are recommended for termination materials AC, AN and HT.
- Soldering is recommended for AP and SP, and is applicable with special processing for AC, AN and HT.
- Eutectic bonding is recommended for all termination materials except SP; preforms are preferable.
- Conductive epoxy can be used with all termination materials.
- HT is recommended for high temperature soldering.

DWV for all ATC Fixed Capacitors except 100E Capacitors and 200 A and B: 250% of working voltage

Note: Mechanical configurations for the ATC200 Series are the same as those for ATC100 Series, except for VNMS which is not offered in the 200 Series.

All dimensions are in inches except those in parentheses which are in millimeters.

* VNMS improves the resonant frequency performance over that of the standard Microstrip. The first important parallel resonance is approximately twice as high in frequency as with "flat" mounting (NMS). Note that in this configuration, the marking is now on a vertical surface. For details, contact factory.

All leads are high purity silver and are attached with high temperature solder.

LASER MARKED CAPACITORS with manufacturer's indentification, capacity and tolerance code are available for any case size (including chips and pellets). To order, add suffix (X) to code.

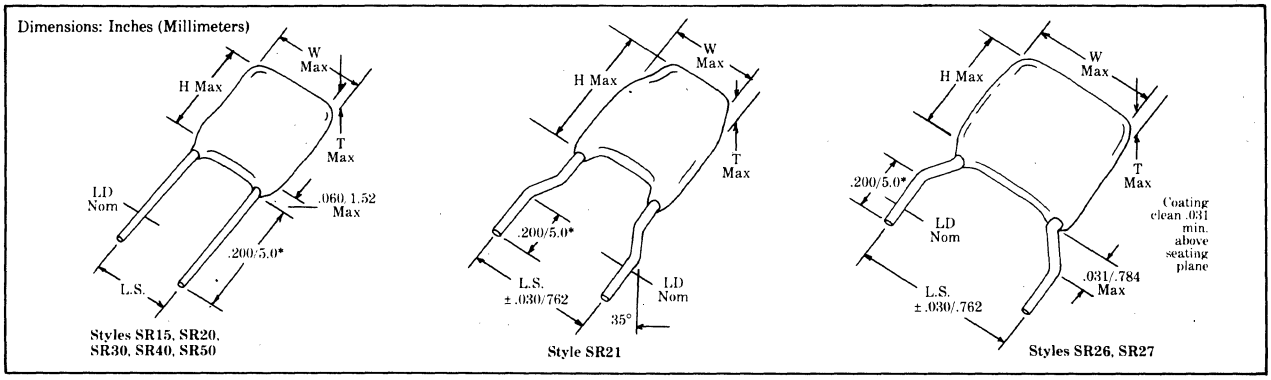
AVX SR Series
Conformally Coated Radial Leaded MLC
Temperature Coefficients: NPO, X7R, Z5U
50, 100 Volts (200V available on request)
Case Material: Epoxy (Flame retardant to UL Bulletin 492, Pra. 280)
Lead Material: Solderable

Dimensions: Inches (Millimeters)



*Lead length tolerance = +.060 (1.5 mm) -0. Also available with lead length of 1.25" (31.75)minimum.

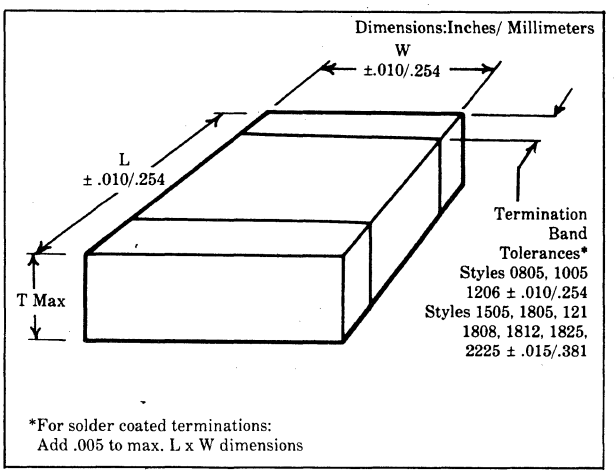
MLC Chips

AVX

GENERAL INFORMATION

NPO (COG), X7R, Z5U Temperature Coefficients
25, 50, 100 Volts
MLC chips can be supplied with established reliability screening per MIL-C-55681, or high reliability screening upon request.



Packaging

5000 pcs per vial or can be taped and reeled per EIA Specification RS 1460.

Tape and Reel packaging quantities:
Standard Carrier Tape (8mm) = 4000 pcs
Embossed Carrier Tape (8mm) = 2600 pcs

MINIGLOSSARY CAPACITORS

Anode: One of two plates or conductors. In polarized capacitors, the anode should be connected to the positive conductor in the circuit.

Capacitive Reactance: The measure of the opposition of a capacitor to accepting a charge and expressed in ohms. When direct current is applied under stated conditions capacitive reactance becomes a constant but, when alternating current is applied the capacitive reactance varies until an equilibrium is achieved and the capacitor appears to have only direct current present. This condition is commonly used in filter applications or in coupling circuits.

Cathode: One of two plates or conductors. In electrostatic capacitors the cathode is metallic. In electrolytic capacitors the cathode is a liquid, gel or other conductive material which is in intimate contact with a metallic cathodic connection.

Dielectric Constant: The measure of quality of the insulating materials in a capacitor. Dry air has a dielectric constant of one (1). Aluminum oxide used in aluminum electrolytic capacitors has a nominal dielectric constant of ten (10).

Electrolytic: A capacitor with one metallic conductor (generally the anode) and with a liquid or semiconductor cathode. Nonpolarized electrolytic capacitors generally have two equal anodes as well as the liquid cathode. These anodes operate alternately as anode and cathodic connection as alternating current is applied.

Electrostatic: One of two general classes of capacitors in which two or more discrete metallic conductors are present and separated by an insulating dielectric material. Examples include: mica, ceramic, film, and paper types.

Farad: The basic unit of measure in capacitors. A capacitor charged to one volt with a charge of one coulomb (one ampere flowing for one second) has a capacitance of one farad. Capacitors are generally rated at portions of a farad (microfarads or picofarads).

1 farad (F) = 1,000,000 microfarads (μF) 1 microfarad (μF) = 1,000,000 picofarads (pF)

Impedance: All capacitors exhibit impedance. It is a function of capacitor type and internal construction. This can be particularly important in certain applications such as filters for switching power supplies. Capacitors used in these applications often have special multiple tab construction to shorten current paths and to reduce internal resistance.

Leakage Current: Expressed as dcl for electrolytic capacitors, a measure of the intrinsic losses in a charged capacitor. Generally speaking, the lower the dcl, the higher quality the capacitor.

Power Factor: A measure of the overall efficiency of a capacitor. Power factor ratings take all internal losses into consideration in a complex formula. This parameter of certain capacitors is often very important in AC applications such as motor-start and/or motor-run capacitors.

Rated Voltage: The rated working voltage of a capacitor. Generally expressed in DC Volts (Vdcw). This is the voltage at which a capacitor may be safely operated at 25°C continuously within its overall parameters.

Ripple Current: The total amount of alternating and direct current that may be applied to an electrolytic capacitor under stated conditions. In general, the higher the ripple current applied, the shorter the operating life of the capacitor will be. Application of significantly higher than rated ripple currents can shorten the capacitor life dramatically and may even cause catastrophic failure (explosion).

Surge Voltage: The momentary surge voltage which may be applied for a stated length of time without doing permanent damage to the unit.

Temperature: Capacitors are generally rated at 25°C at sea level under specific humidity conditions. Operating temperature ranges are also given, along with derating (reliability) curves for operation at temperatures other than 25°C.

Temperature Coefficient: Expressed as TC in ppm (parts per million) or in percent (%) from the norm of 25°C. This is seldom a straight line and may vary widely for certain types. Most capacitors have positive TC in that the capacitance increases as temperature increases. Some types, however, have negative TC in that the capacitance decreases as temperature increases.

Ceramic Capacitor Codes
(Capacitance Given In pF)

Color	Digit	Multiplier	Tolerance			Temperature Coefficient ppm°C	Significant Figure	Multiplier
			Class 1		Class 2			
			10pF or less	Over 10pF

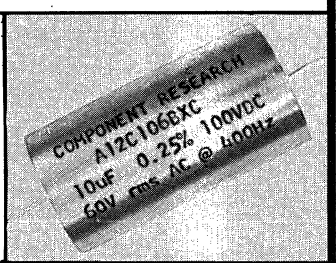
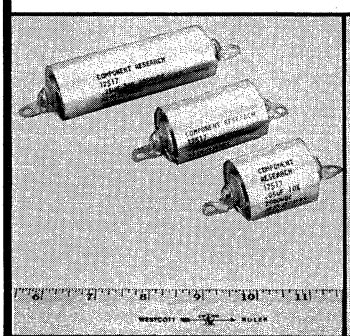
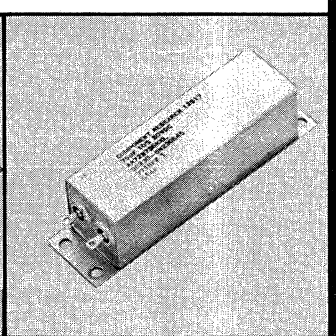
CRITICAL PROGRAMS QUALIFICATION



TRIDENT MARK 46
LANCE MISSILE MARK 48
F15 AIRCRAFT SPARROW
F18 AIRCRAFT NEARTIP
SPACE SHUTTLE NOMI I
ROLAND HARPOON
AND MANY OTHERS

CRC hermetically sealed plastic film capacitors are acknowledged world wide as the highest quality. Standard tubular metallized polycarbonate capacitor, AC rated to 40KHz and qualified to MIL-C-83421/01 is shown above.





Type 55 foil polypropylene capacitors are used in power resonating applications up to 160KHz and with fast switching, high peak current devices. A typical 10uF capacitor measuring 1.25″ diameter x 3.375″ length can handle up to 50A rms under continuous duty operation. Its ESR at 100KHz is approximately 0.0016 ohms which is typical of the low loss inherent in these capacitors.

This 75uF, 50VDC, metallized polycarbonate capacitor is 1″ square by 3¾″ long and is rated at 10A rms at 25KHz at 100°C. Each capacitor receives 168 hours of AC voltage at 25KHz to produce 10A rms in combination with 50VDC applied during burn-in at 100°C.

TYPE A12 & K12

DIELECTRIC: Metallized Polycarbonate

CONSTRUCTION: Metal case hermetically sealed

VOLTAGE RATING: 30-400 VDC

A.C. RATING: 22 to 240 VRMS @ 400Hz, AC ratings to 40KHz

OPERATING TEMPERATURE: −65°C to +125° (Derate 50% from 100°C to 125°C)

CAPACITANCE RANGE: .001 to 27uF, .1% to 10% tolerances

INSULATION RESISTANCE: 300,000 meg-uF (100,000 meg-uF for K12 @ 25°C)

DISSIPATION FACTOR: .15% max. @ 1KHz

DIELECTRIC ABSORPTION: .1% maximum

SCREENING: 100% Quality conformance inspection. Qualified to Failure Rate "S" of MIL-C-83421/01.

APPLICATIONS: Timing, filter and feed-back circuits, pulse-forming networks. A12 and K12 capacitors are used extensively in the Space Shuttle Program.

TYPE G12

DIELECTRIC: Miniaturized Metallized Polycarbonate

CONSTRUCTION: Metal case hermetically sealed

VOLTAGE RATING: 30-200VDC

A.C. RATING: 22 to 120 VRMS @ 400Hz, AC ratings to 40KHz

OPERATING TEMPERATURE: −65°C to +125°C (Derate 50% from 100°C to 125°C)

CAPACITANCE RANGE: .001 to 10uF, .1% to 10% tolerances

INSULATION RESISTANCE: 100,000 meg-uF @ 25°C

DISSIPATION FACTOR: .15% max. @ 1KHz

DIELECTRIC ABSORPTION: .1% maximum

SCREENING: 100% Quality conformance inspection per applicable paragraphs of MIL-C-83421.

APPLICATIONS: Timing, filter, feed-back circuits, and pulse-forming networks. Used where small size is critical. G12 capacitors are used in numerous Navy missile and torpedo projects.

TYPE P14

DIELECTRIC: Metallized Polysulfone

CONSTRUCTION: Metal case hermetically sealed

VOLTAGE RATING: 30-400VDC

A.C. RATING: 22 to 240 VRMS @ 400Hz, AC ratings to 40KHz

OPERATING TEMPERATURE: −65°C to +150°C (Derate 50% from 125°C to 150°C)

CAPACITANCE RANGE: .001 to 27uF, .25% to 10% tolerances

INSULATION RESISTANCE: 200,000 meg-uF @ 25°C

DISSIPATION FACTOR: .15% max. @ 1KHz

DIELECTRIC ABSORPTION: .1% maximum

SCREENING: 100% Quality conformance inspection with 96 hours AC burn-in @ 400Hz. Screening per applicable paragraphs of MIL-C-83421.

APPLICATIONS: Timing, filter, feed-back circuits, motor start and pulse-forming networks. Used in critical AC and DC applications where high temperature and small size is important. Used in numerous military and avionics applications.

CRC COMPONENT RESEARCH CO.

COMPARISON OF CAPACITOR TYPES

ESTABLISHED RELIABILITY CAPACITORS

TYPE J11 & K11

DIELECTRIC: Metallized Teflon

CONSTRUCTION: Metal case hermetically sealed

VOLTAGE RATING: 50-200VDC

OPERATING TEMPERATURE: −65°C to +125°C

CAPACITANCE RANGE: .001 to 2uF, .1% to 10% tolerances

INSULATION RESISTANCE: 1,000,000 meg-uF

DISSIPATION FACTOR: .05% max. @ 1KHz

DIELECTRIC ABSORPTION: .01% maximum

SCREENING: 100% Quality conformance inspection per applicable paragraphs of MIL-C-83421. Will meet all environmental requirements of MIL-C-83421 except vibration at 20 g's and shock at 50 g's.

APPLICATIONS: Timing, sample and hold, integrating and tuning circuits. J11 and K11 are used in critical space, military applications which require lowest dielectric absorption and highest insulation resistance and low dielectric loss.

TYPE A91

DIELECTRIC: Foil Teflon

CONSTRUCTION: Metal case hermetically sealed

VOLTAGE RATING: 50-400VDC

A.C. RATING: 36 to 240 VRMS @ 400Hz, AC ratings to 40KHz

OPERATING TEMPERATURE: −65°C to +150°C

CAPACITANCE RANGE: .001 to 1.2uF, 1% to 10% tolerances

INSULATION RESISTANCE: 1,000,000 meg-UF

DISSIPATION FACTOR: .02% max. @ 1KHz

DIELECTRIC ABSORPTION: .01% maximum

SCREENING: 100% Quality conformance inspection per applicable paragraphs of MIL-C-83421. Will meet all environmental requirements of MIL-C-83421 except vibration at 20 g's and shock at 60 g's.

APPLICATIONS: Pulse-forming networks, timing, sample and hold, integration and tuning circuits. A91 is used in hi-rel programs which require a rugged low loss capacitor with high insulation resistance and low dielectric absorption.

TYPE K93

DIELECTRIC: Polystyrene

CONSTRUCTION: Metal case hermetically sealed

VOLTAGE RATING: 50-400VDC

A.C. RATING: 36 to 240 VRMS @ 400Hz, AC ratings to 40KHz

OPERATING TEMPERATURE: −65°C to +85°C

CAPACITANCE RANGE: .001 to 2.7uF, .1% to 10% tolerances

INSULATION RESISTANCE: 1,000,000 meg-uF

DISSIPATION FACTOR: .02% max. @ 1KHz

DIELECTRIC ABSORPTION: .02% maximum

SCREENING: 100% Quality conformance inspection

APPLICATIONS: Qualified for the Trident Program. Used in critical space and military applications that require stability, high insulation resistance, low dielectric absorption and low dissipation factor.

TYPE A54

DIELECTRIC: Foil Polysulfone

CONSTRUCTION: Metal case hermetically sealed

VOLTAGE RATING: 100-400VDC

A.C. RATING: 60 to 240 VRMS @ 40KHz

OPERATING TEMPERATURE: −65°C to +150°C (Derate 50% from 125°C to 150°C)

CAPACITANCE RANGE: .001 to .47uF, 1% to 10% tolerances

INSULATION RESISTANCE: 100,000 meg-uF

DISSIPATION FACTOR: .1% max. @ 10KHz

DIELECTRIC ABSORPTION: .2% maximum

SCREENING: 100% Quality conformance inspection with 400Hz burn-in.

APPLICATIONS: Snubber, high current pulse applications. A54 capacitors are used in the F18 aircraft.

TYPE B54

DIELECTRIC: Foil Polysulfone

CONSTRUCTION: Metal case hermetically sealed

VOLTAGE RATING: 600 & 800VDC

A.C. RATING: 400 & 600 VRMS @ 400Hz, high current ratings to 40KHz, low E.S.R.

OPERATING TEMPERATURE: −55°C to +125°C

CAPACITANCE RANGE: .033 to .82uF

INSULATION RESISTANCE: 100,000 meg-uF

DISSIPATION FACTOR: .2% max. @ 10KHz

SCREENING: 100% Quality conformance inspection with 400Hz burn-in.

APPLICATIONS: Snubber circuits, switching power supplies and where high RMS and peak current ratings are required.

TYPE B14

DIELECTRIC: Metallized Polysulfone

CONSTRUCTION: Metal case hermetically sealed

VOLTAGE RATING: 600 & 800VDC

A.C. RATING: 400 & 600 VRMS @ 400 Hz, high current AC rating to 40KHz, low E.S.R.

OPERATING TEMPERATURE: −55°C to +125°C

CAPACITANCE RANGE: .01 to 1.2uF

INSULATION RESISTANCE: 100,000 meg-uF

DISSIPATION FACTOR: .5% max. @ 10KHz

SCREENING: 100% Quality conformance inspection with 400Hz burn-in.

APPLICATIONS: Snubber circuits, switching power supplies and where high RMS and peak current ratings are required.

TYPE B55

DIELECTRIC: Foil Polypropylene

CONSTRUCTION: Metal case hermetically sealed

VOLTAGE RATING: 600 & 800VDC

A.C. RATING: 400 & 600 VRMS @ 400Hz, high current ratings to 40KHz, low E.S.R.

OPERATING TEMPERATURE: −55°C to +85°C

CAPACITANCE RANGE: .033 to .82uF

INSULATION RESISTANCE: 100,000 meg-uF

DISSIPATION FACTOR: .05% @ 10KHz

SCREENING: 100% Quality conformance inspection with 400Hz burn-in.

APPLICATIONS: Snubber circuits, switching power supplies and where high RMS and peak current ratings are required.

TYPE B15

DIELECTRIC: Metallized Polypropylene

CONSTRUCTION: Metal case hermetically sealed

VOLTAGE RATING: 600 & 800 VDC

A.C. RATING: 400 & 600 VRMS @ 400Hz, high current ratings to 40KHz, low E.S.R.

OPERATING TEMPERATURE: −55°C to +85°C

CAPACITANCE RANGE: .01 to 1.2uF

INSULATION RESISTANCE: 100,000 meg-uF

DISSIPATION FACTOR: .05% max. @ 10KHz

SCREENING: 100% Quality conformance inspection with 400Hz burn-in.

APPLICATIONS: Snubber circuits, switching power supplies and where high RMS and peak current ratings are required.

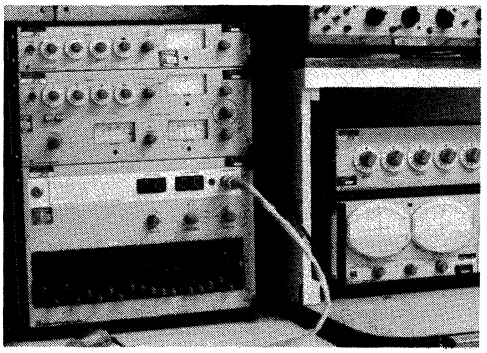
CRC COMPONENT RESEARCH CO.

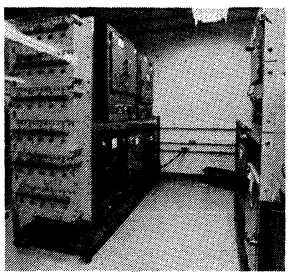
A VIEW OF CRC MANUFACTURING GENERAL PRODUCT INFORMATION

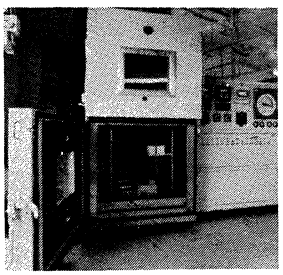
ESTABLISHED RELIABILITY CAPACITORS

CAPACITOR ASSEMBLY: Typical production area located within our award winning 50,000 sq. ft. manufacturing facility. Ideal assembly conditions enable CRC employees to produce high reliability precisely and efficiently.



CALIBRATION EQUIPMENT: Hundreds of precision instruments for parametric measurement are maintained under constant calibration. One out of approximately four employees is dedicated to quality control assurance, and inspection. CRC supplies capacitors for laboratory standards use throughout the world.

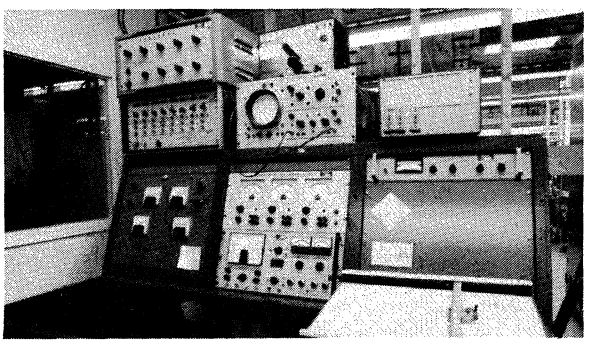




BURN-IN AND TEMPERATURE CYCLING: Before and after hermetic sealing, CRC capacitors receive 100% burn-in.

The 12 foot high shock chamber above right, was used in performing 500 thermal shock cycles (−55°C to +125°C) on CRC metallized polycarbonate capacitors being qualified for the space shuttle program.

Vibration, shock, salt spray, humidity, pressure, and various other stress tests are conducted in our modern laboratories. During these tests, capacitance parameters are accurately monitored in order to study how our products can be constantly improved. CRC has over 200 cubic feet of thermal shock and aging work space available.



ENVIRONMENTAL TESTING: Our qualified testing laboratory contains equipment necessary to perform random and sinusoidal vibration, shock, acceleration, moisture resistance, salt spray, solderability, resistance to solvents, barometric pressure, and many other tests. This laboratory is used daily to qualify standard and special designs as well as to prove out new designs. These capabilities ensure the consistent quality of our established reliability capacitors.

ORDERING INFORMATION — Terms: Our terms are net 30 days to customers approved by our credit department. All shipments are F.O.B., Santa Monica, Calif. **Minimum Order:** Minimum billing per order is $50.00. **Complete Part Number:** Please make certain that you have complete part number to avoid any errors or delays. Please check part number instructions on individual specification pages.

PART NUMBER OBSOLESCENCE — Due to changes in military specifications for which we are qualified, upgrading of our catalog specifications, or size reduction, part numbers formerly used may now be obsolete. We urge our customers to change their existing drawings to indicate the new part numbers for old and new design, wherever possible. If you are unable to make this change, CRC will continue to supply and mark parts indefinitely to the old specifications.

CONSTRUCTION INFORMATION — Unless otherwise specified all parts listed are metal cased, tubular, with both wire terminals isolated from the metal case.

INSTALLATION INSTRUCTIONS — To prevent damage to the hermetic seal joint, use a tweezer type heat sink between the soldering iron and solder beads when soldering within ¼" of beads. Prior to lead bending or twisting, protect glass seals and solder joints by gripping lead near solder bead with a small plier.

Contaminating films on the glass seal surfaces may appear during customer handling and installation of capacitors. To preserve the high insulation resistance inherent in CRC capacitors, clean the glass seal surfaces thoroughly with acetone or chlorinated hydrocarbon fluid.

CAPACITOR MEASUREMENT INFORMATION — The high quality of CRC capacitors may be difficult to evaluate unless sufficiently sensitive and accurate equipment is utilized in conjunction with proper measurement techniques.

Capacitance bridges equal to the General Radio 1620A are recommended for best accuracy of capacitance. This bridge is satisfactory for dissipation factor measurement of capacitors up to 1 uF. CRC has developed a special bridge capable of accurately measuring dissipation factor of capacitors up to 100 uF or more at frequencies up to 1 KHz. For inspection of DF of larger than 1 uF capacitors it is suggested that you use samples correlated by our measurement laboratory.

Insulation resistance measurement is performed by Component Research Co. using leakage current methods which are repeatable to 1 picoamp for capacitors less than 0.1 uF. Larger values require adequate charge time to minimize dielectric absorption effects. Guard boxes are used to perform leakage current and dielectric absorption measurements.

PATENT INFORMATION — CRC capacitors are exclusively manufactured under one or more of the following patents: 3,238,428; 3,260,906; 3,292,063; 3,506,895; 3,539,886; 3,603,849; 3,626,362. Additional patents pending.

CRC COMPONENT RESEARCH CO.

OPTIONS AVAILABLE FOR STANDARD CAPACITORS

ESTABLISHED RELIABILITY CAPACITORS

Following is a list of some options and characteristics available when you are required to meet special design or operating conditions.

SPECIAL CAPACITOR VALUES

If your application requires odd values such as 0.10015uF ±0.1% or 0.9999uF ±0.25%, such requirements are readily met from our large stock of standard and non-standard values. Individual capacitors can be permanently marked or tagged with discrete values accurate to six places if required.

SPECIAL VOLTAGE RATINGS

Problems of size may occur when replacement of a poor quality capacitor is required. Under certain conditions such as restricting the operating temperature, or limiting DC hipot to 150% of rated volts, a substantial size reduction is possible. Check with our applications engineering department for our recommendations in such cases.

LINEAR TC SLOPE for RESISTOR MATCHING

CRC Series A93 Polystyrene Capacitors provide the closest approximation to a straight line plot for capacitance vs temperature over the range of −50°C to +85°C, with less than 150PPM/°C in negative slope. Larger capacitor values appear to have lower TC than smaller capacitor values. Typically, values ranging 0.01uF average −100PPM/°C and 1.0uF range −40PPM/°C. The normal worst case limits in non-linearity of TC slopes are ±50PPM/°C for all A93 polystyrene capacitors. Slopes are available as low as ±10PPM/°C for the full temperature range of −50°C to +85°C. This slope is a permanent characteristic and will remain constant with temperature cycling and time.

±10PPM/°C TRACKING MATCHED CAPACITORS

In some applications it is desirable to have several capacitors of the same value track together over a specified temperature range.

Frequently good linearity is not mandatory, provided all capacitors although non-linear, follow the same pattern of varying in capacitance with temperature. In other applications a set of different capacitors must track within a defined ratio limit of each other as temperature changes.

From its large stock of 100% screened and batch controlled high reliability capacitors, CRC can furnish many combinations of desired matched capacitors in a minimum of time.

MATCHED SETS TO ±0.05% ACCURACY

CRC can provide matched sets of two or more capacitors with readings of ±0.05% of each other although the purchase tolerance is as high as ±1%. This is more economical than purchasing individual capacitors to ±0.1% or ±0.25% tolerances.

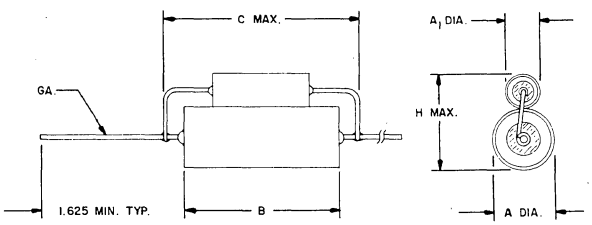
ZERO TEMPERATURE COEFFICIENT BY TC MATCHED PAIRS

It is difficult to obtain zero TC over a wide temperature range. But over a more limited range CRC can provide a TC as low as zero ±5PPM/°C by pairing two capacitors with opposing slopes. Typically an A93 polystyrene capacitor matched with the same value A12 polycarbonate capacitor will match to zero ±30PPM/°C from −10°C to +85°C, as off the shelf purchased items.

If lower TC than this is required, we can 100% measure and match for closer temperature coefficient.

"PIGGYBACK" PERMANENTLY CONNECTED MATCHED CAPACITORS

Customers sometimes prefer the matched capacitors connected together as one to prevent their separation prior to installation. CRC standards are made by "piggyback" connection of trimmers which can provide accuracies to ±0.05%. Shown below is a figure of a "piggyback" connected matched capacitor.



50,000,000 MEGOHMS INSULATION RESISTANCE

This may seem incredible but CRC is supplying special 1uF teflon capacitors which measure up to 5,000,000 megohms at 100°C, and up to 50,000,000 megohms at temperature from 25°C to −40°C.

CRC is developing new methods of measuring to higher levels of insulation resistance and believes it will be able to verify that specially selected smaller values such as 0.1uF can be supplied to meet a specification of 500,000,000 megohms. When you use capacitors in such sensitive applications certain errors and disturbances not normally observed become visible. Some of these are described below.

LOW "PIEZO ELECTRIC LIKE" VOLTAGE GENERATION CAPACITORS

When subjected to a temperature change, capacitors generate a voltage which may vary from one to another within the lot. Voltage up to ten millivolts per °C have been observed. While voltage outputs generally do not increase linearly with temperature, in some cases there has actually been voltage reversal during a temperature run in a given direction.

CRC supplies specially selected 0.5uF, 50VDC teflon capacitors similar to the J11B504 styles to meet requirement of 0.5 millivolts maximum/°C voltage generation, for a critical application.

CRC
COMPONENT RESEARCH CO.

HIGH PULSE CURRENT METALLIZED CAPACITORS

ESTABLISHED RELIABILITY CAPACITORS

CRC PLASTIC FILM CAPACITORS have low loss electrode terminations that are unsurpassed for current handling after exposure to the extremes of thermal shock and operational life.

CRC FOIL CAPACITORS utilizing low loss plastic films such as polypropylene, teflon, polystyrene, and polysulfone are recommended for use with fast switching rates at very high peak currents.

CRC METALLIZED FILM CAPACITORS with lower repetition rates and relatively high currents, can be used to conserve space and weight.

As an example a 10uF, 30VDC, metallized polycarbonate capacitor type G12A106 was charged at 30VDC and discharged into a 0.02 ohm vacuum switch at a 1 PPS rate for days to determine if it would open up. There was no noticeable effect on ESR or dissipation factor as a result of this test.

During this test the first ½ sine discharge current pulse was approximately 180 amperes and decayed to zero current after several 100 KHz resonant cycles.

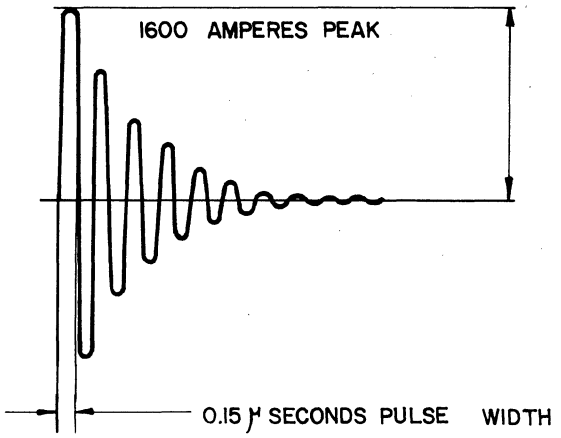
We attempted to open this miniature 10uF capacitor by charging it with 100VDC which resulted in a first ½ sine pulse current of 500 amperes peak at a 1 PPS rate for several hours. Despite the voltage overstress applied and the extremely high peak capacitor current developed, we could not degrade the termination quality of the G12A106 capacitor.

We can conclude that CRC miniature metallized polycarbonate capacitors are capable of handling enormous discharge current provided the repetition rate is slow.

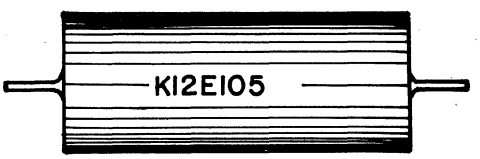
A study is now being conducted by CRC to determine the optimum AC operating conditions with maximum energy density under high current pulse conditions for metallized vs. metal foil capacitors.

These tests will determine what repetition rate conditions require a larger foil capacitor instead of a smaller metallized film capacitor for failure-free operation.

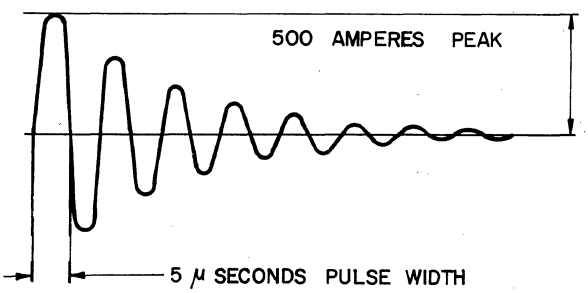
IF YOUR APPLICATION REQUIRES MAXIMUM RELIABILITY, SMALLEST SIZE, AND OPERATION IN CRITICAL AEROSPACE OR INDUSTRIAL ENVIRONMENTS, CRC APPLICATION ENGINEERS WILL BE PLEASED TO REVIEW YOUR SPECIFICATIONS FOR CORRECT CAPACITOR USAGE.



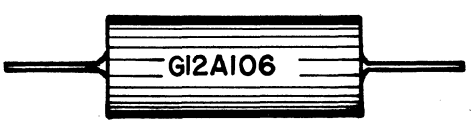
IN THIS TEST A 1 uF, 400VDC, METALLIZED POLYCARBONATE CAPACITOR, TYPE K12E105, IN A 0.750" X 1.875" CASE DEVELOPED 1600 AMPERES PULSE CURRENT WHEN DISCHARGED INTO A 0.02 OHM SWITCH LOAD AFTER CHARGE AT 800VDC. REPETITION RATE WAS 1 PPS AND NO DEGRADATION OF ESR OR DISSIPATION FACTOR OR CASE WARM-UP WAS MEASURABLE AFTER SEVERAL HOURS OF OPERATION.



Actual size of the 1uF, 400VDC capacitor tested at developed pulse currents up to 2600 amperes peak to peak at 1 PPS rate.



CAPACITOR DISCHARGE CURRENT SHOWN FOR TYPE G12A106 METALLIZED POLYCARBONATE CAPACITOR, 10 uF, 30VDC, AFTER CHARGE AT 100VDC AND DISCHARGE INTO A 0.02 OHM SWITCH LOAD. REPETITION RATE WAS ONE PULSE PER SECOND AND THE RESONANT FREQUENCY RESULTING FROM DISCHARGE INTO THE LOAD IS 100KHz.



Actual size of the 10uF, 30VDC capacitor tested at developed pulse currents up to 900 amperes peak to peak at 1 PPS rate.

CRC COMPONENT RESEARCH CO.

MIL-C-83421/1 - MIL-C-39022/9 MANUFACTURING & INSPECTION FLOW PLAN

ESTABLISHED RELIABILITY CAPACITORS

100% INSPECTION PER MIL-C-83421 & MIL-C-39022

The high reliability capacitor screening plans developed by Component Research Co. have been adopted by space and military contractors throughout the world for critical programs. The new general specification MIL-C-83421 incorporates much of the screening features shown below at an attempt to provide a "state of the art" capacitor specification for general industrial and aerospace use.

Our flow plan for manufacturing and inspection shown below covers the steps used to process and screen all of our polycarbonate, teflon, polystyrene and polysulfone film capacitors. The individual specifications shown in the catalog list the actual screening performed for each style. A choice of three quality levels provides different degrees of intensive screening to assure the highest possible quality at lowest cost. Special screening plans are available which include tests such as 100% corona inception inspection, 40KHz AC burn-in at 100°C, high impedance monitoring for intermittent conditions at low voltage during temperature cycling, ESR inspection at 100KHz, dielectric absorption effects with rapid switching rates and varying temperature, and many other sensitive measurement phenomena.

100% PROCESSED AND SCREENED

Steps 1-9 show the 100% processing (up to and including hermetic sealing), of MIL-C-39022/9 and MIL-C-83421/1 qualified polycarbonate and CRC standard capacitors — Polycarbonate, Teflon, Polystyrene and Polysulfone. The quality level selected will be determined by the individual capacitor specification.

PROCESSING STEPS

A. CAPACITOR MATERIAL INSPECTION
B. IDENTIFY PROCESS PAPERWORK WITH MATERIAL LOT NUMBERS
C. CAPACITOR SUB-ASSEMBLY INSPECTION
D. SPECIAL VACUUM PROCESSING
E. HERMETIC SEAL AFTER NITROGEN BACK-FILL
F. INITIAL INSPECTION OF COMPLETED CAPACITOR (7X POWER)

QUALITY LEVEL 1 MIL-C-83421/1 & MIL-C-39022/9

1. BURN-IN
2. TEMPERATURE CYCLING
3. HELIUM LEAK TEST AND GROSS LEAK TEST
4. AC-DIELECTRIC STRENGTH
5. DC-DIELECTRIC STRENGTH
6. INSULATION RESISTANCE
7. % CAPACITANCE TOLERANCE
8. % DISSIPATION FACTOR
9. SELECTION FOR PERFORMANCE GRADES
10. REPEAT ELECTRICAL MEASUREMENT AND RECORD DATA AS REQUIRED
11. CONDUCT SPECIAL MEASUREMENT WHEN REQUIRED BY CUSTOMER
12. FINAL VISUAL INSPECTION OF WORKMANSHIP, MARKING, PAPERWORK AND PACKAGING
13. SHIP CERTIFICATE OF COMPLIANCE WITH PARTS

Highest reliability capacitors with standard or special screening for Apollo, Viking, and other space programs. Also used in military and ultra high quality industrial applications.

Qualified for space, critical applications, F15 aircraft, Trident, space shuttle and other programs.

QUALITY LEVEL 2 MIL-C-39022/9

1. BURN-IN
2. TEMPERATURE CYCLING
3. HELIUM LEAK TEST AND GROSS LEAK TEST
4. AC-DIELECTRIC STRENGTH
5. DC-DIELECTRIC STRENGTH
6. INSULATION RESISTANCE
7. % CAPACITANCE TOLERANCE
8. % DISSIPATION FACTOR
9. FINAL VISUAL INSPECTION OF WORKMANSHIP, MARKING, PAPERWORK, AND PACKAGING
10. SHIP C OF C WITH PARTS

High reliability capacitors screened for space, missile and industrial applications. Qualified for many programs such as The Tow Missile, The Lance Missile and F15 aircraft.

QUALITY LEVEL 3 MIL-C-83421/1 & MIL-C-39022/9

1. TEMPERATURE CYCLING

High reliability capacitors with reduced screening and performance levels for lower cost high volume programs, such as missiles, aircraft and telephone equipment applications.

Random samples from completed production lots of all quality levels are periodically tested.

These tests may consist of Insulation Resistance at high temperature, Dielectric Absorption, Temperature Coefficient and AC stress analysis tests.

In addition, samples are life tested for retention of qualification.

RETENTION OF QPL - MIL-C-83421/1 FAILURE RATE "S"

ESTABLISHED RELIABILITY CAPACITORS

PERIODIC TESTING PROGRAM

GROUP "B" INSPECTION PER MIL-C-83421, TABLE IV

GROUP B, SUBGROUPS 1, 2 and 3: In order to maintain qualification, CRC performs periodic testing. Capacitors from current production lots of CRH01 through CRH00 which have successfully completed "Group A" Inspection (see "A12 and K12 Quality Conformance Inspection") are selected.

SUBGROUP 1 TESTS

10 Each CRH Style Monthly

- Barometric Pressure
- Insulation Resistance at Max. Rated Temperature
- Temperature Coefficient
- Life (2,000 Hours)

SUBGROUP 2 TESTS

CRH01 Parts Jan., July
CRH02 Parts Feb., Aug.
100 Volt Parts March, Sept.
200 Volt Parts April, Oct.
400 Volt Parts May, Nov.

- AC Conditioning 250 Hours
- Dissipation Factor
- Insulation Resistance
- △ Capacitance

SUBGROUP 3 TESTS

18 Parts Every 6 Months, Consisting of CRH01, CRH02, CRH03, CRH04 and CRH05

- Vibration
- Salt Spray
- Immersion
- Solderability
- Shock
- Moisture Resistance
- Terminal Strength
- Resistance to Solvents

DC LIFE TEST PERFORMED MONTHLY

GROUP B, SUBGROUP 1 FOR ALL CRH STYLES COVERING ALL FAILURE RATE LEVELS

Capacitors are DC-Life tested at 100°C and at 140% of the rated D.C. voltage for 2,000 hours. (This is an acceleration factor of 5:1, approximately).

EXAMINATION OR TEST	CONDITIONS	POST TEST LIMITS CRH01, CRH02, CRH03, CRH04, and CRH05	POST TEST LIMITS CRH06, CRH07, CRH08, CRH09, and CRH00
Barometric Pressure	Per MIL-C-83421	No breakdowns	No breakdowns
Insulation Resistance	@ Rated voltage @ 125°C	2,000 Megs-uF need not exceed 20,000 Megs	1,000 Megs-uF need not exceed 10,000 Megs

CRC COMPONENT RESEARCH CO.

CRITICAL APPLICATIONS SCREENING

ESTABLISHED RELIABILITY CAPACITORS

Component Research capacitors are used in critical applications where their reliability and performance can affect the success of an entire program involving years of preparation and billions of dollars of program cost. For over a decade, aerospace programs from Apollo to Space Shuttle have used CRC capacitors for timing circuits and other control circuits, essential for controlling spacecraft millions of miles from earth, after years of space travel.

DC burn-in, thermal aging (temperature cycling), and Group "A" testing generally is sufficient to assure that the capacitors will be reliable for aerospace applications. The standard CRC capacitors listed in this catalog are offered with screening options most commonly required. Special screening can also be provided for critical requirements.

You can depend upon CRC to provide the most reliable capacitor and screening plan for your critical applications. Following are typical screening plans for standard and special applications.

AC BURN-IN AT 400Hz TO 40KHz

400Hz burn-in at 140Vrms at 125°C is generally a standard screen for metallized polysulfone capacitors supplied for aircraft programs. Typically low-loss filter, shunt, and feed-thru capacitors ranging from 1 μF to 240 μF in value receive from 16 hours to 96 hours of 400Hz burn-in at 125°C to provide high reliability performance in programs such as the F18 fighter aircraft, space shuttle, and commercial aircraft equipment.

40KHz burn-in is used in screening small valued metallized polycarbonate capacitors at 100°C for 168 hours for the Trident Program. CRC capacitors used for this program are the A12 Series which undergo rigorous burn-in and special screening for elimination of any possible defects or unusual behavior modes. With incorporation of such severe inspection and surveillance restraints, CRC production standards are maintained at a very high caliber of performance suited to the most critical programs.

AC AND DC COMBINED BURN-IN SCREENING

Several customers specify that the AC and DC voltages be simultaneously applied during burn-in to assure that the capacitor will operate reliably in this mode. Typically we have applied 100VDC together with approximately 2Vrms at 40KHz at 100°C to 22μF, 100VDC metallized polycarbonate capacitors for 168 hours of burn-in time as a Group "A" screen. In this application the 1" diameter x 1.875" long capacitor handles approximately 8 AMPS RMS during burn-in. Following 100% Group "A" screening, a lot sample is tested for 2000 hours as above without DC voltage applied.

CORONA INCEPTION INSPECTION PREVENTS OPERATIONAL FAILURES

In AC applications at 240Vrms levels and higher or where peak voltages exceed 320 volts approximately, capacitors may fail short or long term due to corona attack.

For such applications, CRC recommends capacitors which are uniformly free from corona inception for at least 20% higher than operational voltage conditions.

100% Group "A" corona inspection for no indication of inception is an excellent substitute for dielectric withstanding voltage tests and is a better monitor of possible shorting problems.

RECORDED READINGS BEFORE AND AFTER BURN-IN

Some programs must have recorded data for each capacitor taken prior to and after completion of burn-in and thermal aging. The capacitors are serialized and readings of capacitance, insulation resistance at 25°C and sometimes at elevated temperature are recorded. In addition, readings of capacitance vs. temperature for purposes of determining temperature coefficient and drift can be recorded.

On occasion dissipation factor is recorded at 1KHz and 10KHz and ESR at 100KHz for determination of reliable electrode connections.

40KHz BURN-IN AND CORONA SCREENING

Type BF51 teflon foil capacitors are being used in a high frequency switching application with a rise time of less than 1 microsecond, in a limited space. Typically a 0.025 μF, 400VDC rated teflon foil, oil impregnated capacitor operates with; 200 volt peak to peak, 10KHz square wave voltage conditions, a rise and fall time of 100 nanoseconds, in a 0.312 x 1.063 case. Under these conditions this teflon capacitor is relatively cool with peak current of 30 amps developed at a 20KHz repetition rate.

Following is the 100% screening used for this AC application.

1. **Burn-in** for 48 hours at 125°C. Apply 180Vrms at 40KHz ±5%.
2. **Thermal aging** temperature cycle 5 times −65°C to +125°C. Per MIL-C-83421.
3. **Seal Test** Bake for 4 hours at 125°C. Check for oil leakage or visual damage.
4. **Corona Test** Apply 400Vrms at 60Hz and check for evidence of corona inception.
5. **AC Stress Test** Apply 100Hz square wave voltage, terminal to terminal, for 1 minute, per MIL-C-83421/1, at 1000 volts peak to peak.
6. **DC Hipot** Apply 800VDC terminal to terminal and to case at 25°C for 1 minute, per MIL-C-83421.
7. **Insulation Resistance** when measured with 400VDC at 25°C, 1,000,000 megohms minimum.
8. **% Capacitance** at 1 KHz
9. **% Dissipation** factor at 10KHz, 0.01% maximum.
10. **Final visual** and mechanical inspection.

FAILURE ANTICIPATION
& IMPROVED RELIABILITY

ESTABLISHED
RELIABILITY
CAPACITORS

Plastic film dielectric type capacitors can provide remarkably good electrical characteristics and high reliability but it takes a combination of sound construction, suitable film quality, exacting process control, and 100% testing to achieve this.

Because we are concerned with a proliferation of marginal quality capacitors frequently used in high reliability level aerospace and industrial applications, we are listing below some pitfalls to avoid.

MIS-APPLICATION OF CAPACITORS IN AC CIRCUITS

The highest quality capacitor will fail if its ratings are exceeded by subjecting it to excessive voltage and current stresses. In sinusoidal applications metallized capacitors that warm up over 20°C after several hours of operation are considered a borderline case. You may be applying too high an RMS voltage or frequency.

If the capacitors you are using have higher than normal dissipation factor readings, this may be a sign of high series resistance caused by poor termination on the capacitor section. The square wave AC screening for one minute covered in MIL-C-83421/1 is a good way of eliminating capacitors with gross dissipation factor quality.

If dissipation factor limits are set too high as post test requirements, suspect capacitors will pass the square wave test. In fact terminations may have been damaged by this test, but are permitted to pass what we consider are abnormally high DF limits. A termination that is poor at room temperature generally should be worse at higher temperature and increased heating caused by power loss at the terminations may cause ultimate degeneration and possible failure. We consider 100% AC burn-in at elevated temperature an excellent method of checking for good terminations. Burn-in should be followed in 100% dissipation factor examination.

In SCR commutation and transistor switching type applications heat rise measurements by themselves are not a sufficient means of determining capacitor reliability. In these cases the capacitor is subjected to relatively high peak currents at a low duty cycle. A capacitor not designed for high peak current use while never exhibiting more than a few degrees of heat rise during operation, may open after hours or possibly months of operation.

We recommend that you forward copies of your oscilloscope current and voltage waveforms for analysis of your non-sinusoidal applications.

CAPACITOR OPENS & INTERMITTENTS AFTER ENVIRONMENTAL TESTING OR LONG TERM STORAGE

CRC is frequently requested to replace "Brand X" metallized capacitors (which may have cost 50% less) that fail after being qualified for the application and after passing initial breadboard and preproduction test.

Unfortunately many specifications and programs do not take the effects of temperature cycling into consideration. Capacitor termination may withstand DC burn-in, DC life and even AC life.

Dimensional changes between plastic and metal materials as a result of temperature cycling may result in microscopic ruptures of termination joints, possible electrode oxidation and generally unstable termination series resistance. This is the reason we recommend 100% temperature cycling or thermal aging followed by the screening as described above. Component Research Company patented stress-free termination designs and precise quality control eliminates the above problems.

AC RATED CAPACITORS RELIABILITY QUESTIONS & ANSWERS

ESTABLISHED RELIABILITY CAPACITORS

What are the limiting factors restricting the use of metallized polycarbonate capacitors for AC applications?

A properly manufactured and screened capacitor can handle considerable RMS and peak currents from −55°C to +125°C without significant heat rise. The dissipation factor of capacitors to be used in AC applications must be uniformly low to limit watt loss.

We recommend a maximum dissipation factor of 0.15% at 1KHz as the acceptance test limit. All capacitors should be subjected to temperature cycling prior to final measurement of DF to insure that they remain less than 0.15%. This test eliminates failures which may occur after storage at extreme temperatures.

CRC specifications contain the maximum RMS current and voltage ratings for sinusoidal conditions, continuous duty cycle, at 400Hz and 40KHz. For conditions other than shown, send a sketch of the current and voltage waveforms under worst case and normal operating conditions to our sales office. Include all other information necessary for quotation purposes.

Is polycarbonate better than other dielectrics for AC applications?

If size, weight, cost, or operating temperatures were not important considerations, then other dielectric style capacitors would be superior to polycarbonate.

As an example, CRC can supply polystyrene, teflon, or polypropylene AC capacitors with approximately ten times lower loss than the series 12 polycarbonate capacitors.

Polysulfone is slightly better than polycarbonate for AC applications below 100° C, and can be used above 125°C (the limit for polycarbonate), to 150°C with proper voltage derating.

CRC considers mylar and paper dielectric styles too lossy for AC applications and therefore does not recommend this type for such requirements. Additional information on AC capacitors appears on other pages of this catalog.

What type of screening test will assure that the polycarbonate capacitors are reliable for AC applications?

Once it has been determined that your application requirements can be met by CRC standard polycarbonate series 12 capacitors, the screening test used by CRC and incorporated into MIL-C-83421/1 will be sufficient to provide the quality assurance needed.

As an example, 100% of the capacitors are temperature cycled then subjected to a square wave voltage at 100Hz at 300% of rated DC voltage for peak to peak amplitude.

During this test the capacitors must handle approximately 35 microsecond wide current pulses for one minute at a rate of 200 per second.

A routine examination of the current and voltage waveforms during square wave hipot of 10 uF, 50VDC type CRH capacitors, shows that with 150 volts peak to peak voltage at 100Hz applied, the peak current is 85 amps. This is equivalent to operation with a half sine wave peak current pulse of 8.5 amps/uF at a 200 PPS rate. SEE WAVEFORMS AT RIGHT.

Following the square wave voltage stress test the capacitors must meet 0.15% max. dissipation factor limits.

Life testing of CRC metallized polycarbonate capacitors at 400 Hz and 4000 Hz is performed continuously as retention of qualification to MIL-C-83421/1.

Why are CRC low dissipation factor polycarbonate capacitors replacing commonly manufactured capacitors in AC applications?

There is a risk that the dissipation factor of such capacitors will increase with use and result in hot spots at the terminations. Field failures of such capacitors have been reported where the capacitors have exploded and caused fire damage.

It may be possible to use ordinary higher DF capacitors without noticeable problems at 400Hz, provided that RMS voltage is sufficiently low such that the RMS current is limited. Heat sinking will also help prevent excess heat rise due to poor quality terminations.

Interestingly enough CRC polycarbonate capacitors have a lower dissipation factor at temperatures from 75°C to 125°C than at 25°C which lowers their effective heat rise at higher temperatures. Where the current source is limited, higher DF capacitors may not heat sufficiently to short, but may gradually suffer from increasing DF to the point where they are effectively open.

What is the maximum current that can be applied to MIL-C-83421/1 capacitors?

The 40 KHz current and voltage ratings listed in Table 1 of the Mil-Spec and CRC's specifications shown in this catalog, are based upon continuous operation under sinusoidal conditions. In order to eliminate failures it is essential that any use under conditions exceeding these limits be discussed further with our applications engineers. Under certain conditions, the capacitors can be used at higher frequencies and in square wave filtering applications. For good reliability it is best to study these special applications on an individual basis. CRC plans to provide data tables showing allowable working conditions during higher frequency sinusoidal, pulsed, and non-sinusoidal conditions.

CRC COMPONENT RESEARCH CO.

VOLTAGE TEMPERATURE SCANNING FOR CAPACITOR FAULTS

ESTABLISHED RELIABILITY CAPACITORS

SCREENING FOR HIGH IMPEDANCE FAULTS

All types of capacitors whether metallized or foil, single or dual dielectric construction, can behave intermittently when operated under certain combined conditions of temperature, and high impedance or low power.

As a result of testing thousands of capacitors using computer scanning techniques and analysis of discrepant parts, the following has been concluded:

1) Low resistance faults such as clearings are not visible in CRC capacitors when they are operated under specified conditions. The CRC method of inspection, processing, and grading all film used in a capacitor prior to winding, assures that low resistance faults will not occur. A low resistance fault can arbitrarily be called a conductive path of less than 10,000 ohms.

2) Electro-chemical effects of contamination within the capacitor enclosure can cause spurious, random conduction when the capacitor is operated at elevated temperature in current limited applications such as in the feedback loop of an operational amplifier. Under some conditions the effect is polar resulting in low leakage current with voltage applied in one direction and increased leakage current in the other direction.

The resistance levels for faulty metallized polycarbonate capacitors at 125°C may vary from 10,000 megohms to as low as 1 megohm for capacitors 1 μF and less.

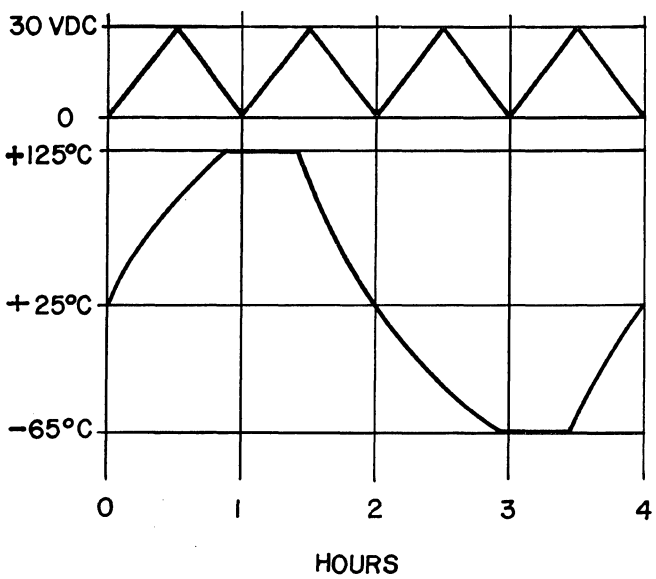
3) High resistance faults of this type are not readily detectable with conventional equipment and will not usually affect performance of most circuits particularly if kept in operation below 100°C.

4) Non-hermetically sealed capacitors or hermetically sealed types with fine or gross leak conditions which have ingested water or other contaminates tend to develop electro-chemical activity within the capacitor enclosure. This type of fault may be accelerated by condensation or pressure changes when the equipment sees temperature differences such as in aircraft or varying humidity conditions.

5) CRC eliminates contamination from its product before sealing and can screen for low or high resistance faults under worst case operating conditions.

Contact CRC for special fault screening if your requirement must have freedom from clearings, intermittent conduction at high temperature and if it must in every way be noise-free electrically.

TYPICAL VOLTAGE/ TEMPERATURE RAMP SCREENING CYCLE



This General Radio model 2230 Component Test System is used in conjunction with CRC specially designed ramp generators, cycling chambers, and interface equipment for voltage/ temperature capacitor fault-scanning.

THERMAL SHOCK TEST 500 CYCLES

ESTABLISHED RELIABILITY CAPACITORS

DATA COVERS A12A 30VDC METALLIZED POLYCARBONATE CAPACITORS

Applications such as the space shuttle require capacitors which can withstand many thermal shock cycles without deterioration of terminations.

In 1976 George C. Marshall Space Flight Center contracted Component Research to manufacture and test MIL-C-83421/1 style parts to withstand 500 thermal shock cycles, while maintaining electrical integrity without becoming intermittent.

One hundred and fifty capacitors incorporating design improvements (which have been implemented in all standard parts since completion of the test) were manufactured and subsequently underwent 500 thermal shock cycles.

One hundred and forty nine (149) capacitors survived the tests. Failure analysis of the failed part was due to a poor solder joint, initially detected during acceptance tests as having poor dissipation factor and equivalent series resistance measurements. Operator error precluded the capacitor being eliminated from the test program.

HIGHLIGHTS OF 500 THERMAL SHOCK CYCLE TEST

■ **60 capacitors were subjected to 500 thermal shock cycles** for accelerated test in liquid to liquid, at the rate of fifty (50) cycles per day. The capacitors were immersed into each liquid for sixty (60) seconds and transferred from one bath to another within fifteen (15) seconds. The temperature extremes were −55°C and 125°C.

TEST RESULTS: (60 CAPACITORS)
+0.84% MAXIMUM CAPACITANCE DRIFT
0.11% MAXIMUM DISSIPATION FACTOR @ 1KHz
0.22% MAXIMUM DISSIPATION FACTOR @ 10KHz
0.19 OHMS MAXIMUM EQUIVALENT SERIES RESISTANCE @ 100KHz
1.6×10^{7} MEG's-uF MINIMUM INSULATION RESISTANCE
■ ALL PARTS PASSED 1×10^{-6} ATM/CM³/SEC MAX LEAK RATE

■ **90 capacitors were subjected to 500 thermal shock cycles** in air to air, at the rate of one (1) cycle per hour. The dwell time at each temperature extreme was a minimum of thirty (30) minutes. The maximum transfer time from one chamber to another was sixty (60) seconds. The temperature extremes were −55°C to +125°C.

TEST RESULTS: (90 CAPACITORS)
+6.3% MAXIMUM CAPACITANCE DRIFT
0.095% MAXIMUM DISSIPATION FACTOR @ 1KHz
0.46% MAXIMUM DISSIPATION FACTOR @ 10KHz
0.53 OHMS MAXIMUM EQUIVALENT SERIES RESISTANCE @ 100KHz
9.7×10^{3} MEG'S-uF MINIMUM INSULATION RESISTANCE

CRC COMPONENT RESEARCH CO.

LIFE TEST - 40,000 HOURS

ESTABLISHED RELIABILITY CAPACITORS

PURPOSE OF 40,000 HOUR LIFE TEST

In 1972 CRC decided to conduct long term life tests on 50VDC metallized polycarbonate capacitors to study the effects of operation at 100°C and rated voltage on capacitance drift, insulation resistance, and dissipation factor.

After five years of test (including approximately 10 months of overstress at 125°C and 280% of rated DC), CRC is pleased to report that our capacitors are highly recommended for long life requirements.

In 1970 thousands of CRC metallized polycarbonate capacitors were used in an underwater cable application requiring a minimum of 20 years operation without failure. There have been no reported failures to date in this critical application or in others, such as long term space probes.

HIGHLIGHTS OF 40,000 HOUR LIFE TESTING

Test conditions were 50VDC at 100°C for 12,000 hours for 45 capacitors resulting in 0.27% max. capacitance drift, 0.17% max. dissipation factor, and 750,000 megs-uF minimum insulation resistance.

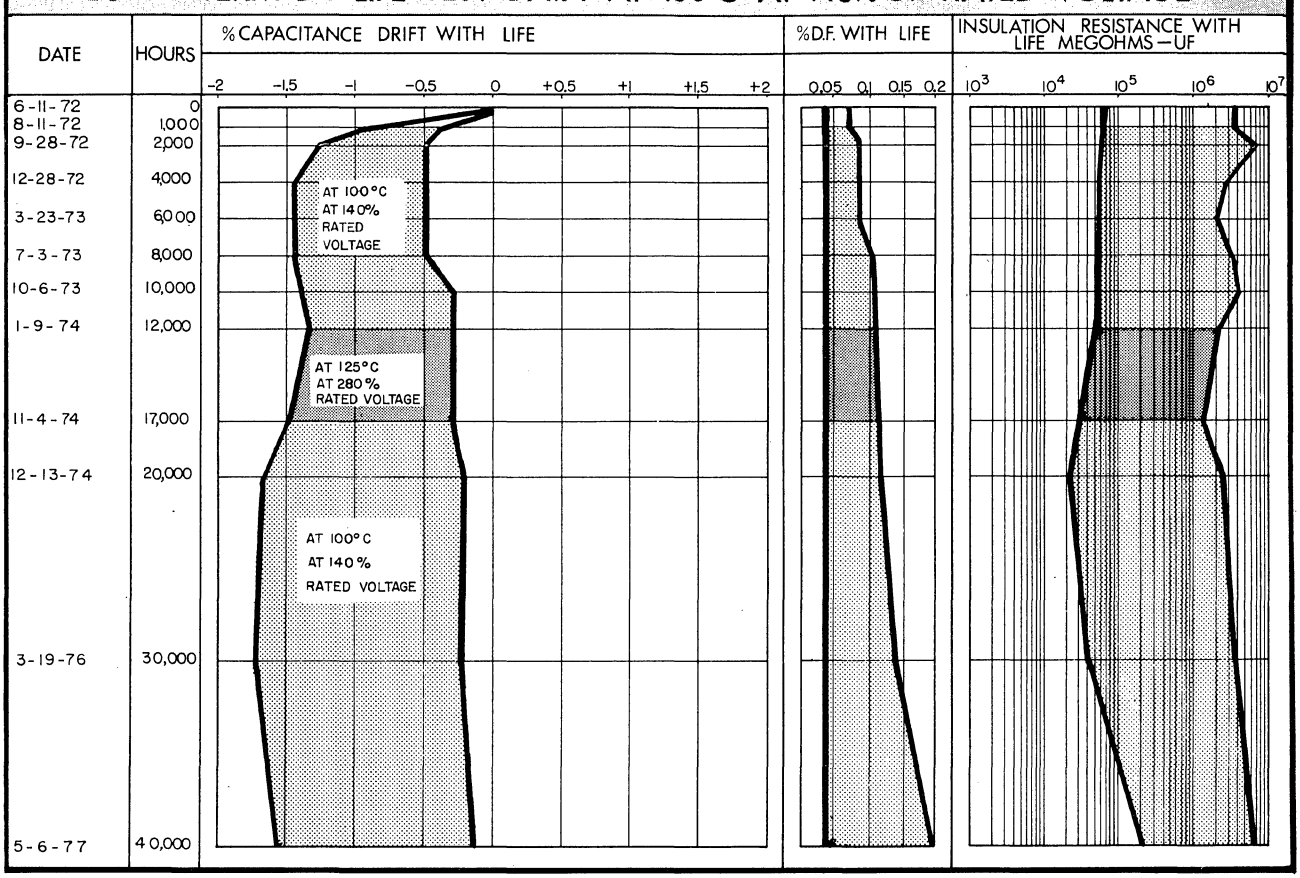
5000 additional hours (in error) were at 125°C and 70VDC which is actually at 280% of rated voltage considering that 50% derating is required from 100°C to 125°C.

As a result one capacitor shorted, capacitance drift was −1.5% worst case. Dissipation factor remained 0.17% max. and insulation resistance was 1,000,000 Megs-uF minimum.

Life testing was continued from 17,000 to 40,000 hours at 50VDC and 100°C with 1.25% max. capacitance drift, 0.19% max. dissipation factor, and 35,000 megs-uF minimum insulation resistance at end of test.

It is obvious that considerably reduced drift and parametric change would have resulted if the 5000 hr. overstress period had not occurred.

LONG TERM DC LIFE TEST DATA AT 100°C AT 140% OF RATED VOLTAGE



COMPONENT RESEARCH CO., INC. ▪ 1655 26TH STREET ▪ SANTA MONICA, CALIF. 90404 ▪ (213) 829-3615. TWX: (910) 343-6864

METALLIZED POLYCARBONATE
A12 & K12

ESTABLISHED RELIABILITY CAPACITORS

PRODUCT FEATURES

1.0 μF 30VDC ACTUAL SIZE CAPACITOR

QUALIFIED TO MIL-C-83421/01 FAILURE RATE S.

HERMETICALLY SEALED, HIGH RELIABILITY SCREENED FOR CRITICAL AEROSPACE APPLICATIONS.

AC RATED FROM 22VRMS TO 240VRMS AT FREQUENCIES FROM 0 TO 400Hz. RATINGS TO 40KHz AT LOWER VOLTAGE RATINGS, −65°C TO +100°C WITH DERATED OPERATION AT 125°C, DC RATED 30VDC TO 400VDC.

100% RELIABILITY SCREENING, INCLUDES BURN-IN, TEMPERATURE CYCLING, FINE LEAK TESTS, AND AC SQUARE WAVE TESTS.

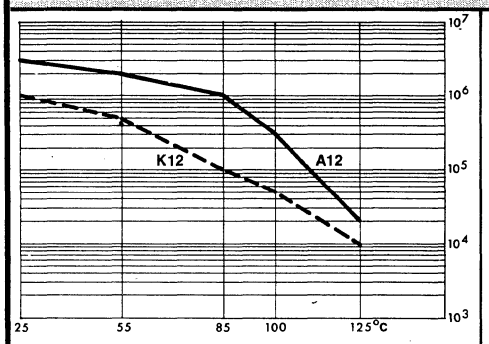
LOW LOSS, RUGGED INTERNAL TERMINATIONS QUALIFIED FOR ALL HI-REL PROGRAMS (CRC PATENTED CONSTRUCTION).

CAPACITORS HAVE BEEN THERMAL SHOCK TESTED FOR 1000 CYCLES FROM −65°C to +125°C, AIR TO AIR AND LIQUID TO LIQUID, SEE THERMAL SHOCK TEST PAGE.

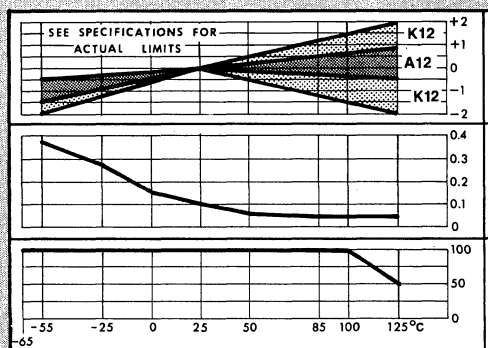
CAPACITORS OF SAME DESIGN AND CONSTRUCTION HAVE BEEN LIFE TESTED TO 40,000 HOURS, SEE 40,000 HOUR LIFE TEST DATA PAGE.

AVAILABLE IN STANDARD TOLERANCES: 0.25%, 0.5%, 1%, 2%, 5%, 10%. OTHER TOLERANCES AVAILABLE ON REQUEST.

TYPICAL CURVES



INSULATION RESISTANCE WITH TEMPERATURE IN MEGOHMS (0.1 μF OR LESS)



% CAPACITANCE CHANGE WITH TEMPERATURE

% DISSIPATION FACTOR WITH TEMPERATURE

% VOLTAGE RATING WITH TEMPERATURE

TYPICAL APPLICATIONS

- CRITICAL TIMING CIRCUITS
- FIXED TUNING CIRCUITS
- FILTERING
- TEMPERATURE COMPENSATION
- COUPLING AND DECOUPLING
- FEEDBACK CIRCUITS
- POWER SUPPLY FILTERING
- GYRO CIRCUITS
- PULSE FORMING NETWORKS
- INTEGRATING CIRCUITS

LIFE TEST DATA CRC TEST REPORT #77TR116

TEST RESULTS FOR SERIES A12 CAPACITORS LIFE TESTED FOR 2000 HOURS AT 100°C AT 140% OF RATED DC VOLTAGE.

THERE WERE NO FAILURES FOR THIS TEST.

METALLIZED POLYCARBONATE A12 & K12

ESTABLISHED RELIABILITY CAPACITORS

A12 AND K12 SPECIFICATIONS

CONSTRUCTION	Metallized polycarbonate dielectric, hermetically sealed, extended metal film electrodes, axial leads isolated from case.		
ENVIRONMENTAL	Capacitors meet all environmental requirements and are qualified to MIL-C-83421/1.		
OPERATING TEMPERATURE	−65°C to +100°C		At full rated voltage, derate linearly to 50% of rated voltage at 125°C.
DIELECTRIC ABSORPTION	0.1% maximum		At 25°C when measured per MIL-C-83421.
DISSIPATION FACTOR	0.15% maximum		At 25°C when measured per MIL-C-83421.
AC SQUARE WAVE	100Hz, 60 seconds minimum		At 25°C at a peak to peak voltage of 3 times rated DC voltage, terminal to terminal per MIL-C-83421.
DIELECTRIC STRENGTH	200% rated DC voltage		At 25°C from terminal to terminal and terminal to case for 60 seconds minimum.
TEMPERATURE COEFFICIENT (IN % CAPACITANCE)	A12	−0.5% to +0.8%	From +25°C to +125°C
	K12	±2%	
	A12	−0.5% to −1.5%	From −55°C to 25°C
	K12	−0.5% to −2.0%	
CAPACITANCE STABILITY (IN % CAPACITANCE)	A12	±0.2%	When measured at any two corresponding temperature points taken in five successive temperature cycles from −65°C to +125°C.
	K12	±0.25%	
HERMETIC SEAL	1×10^{-6} atm/cm³/sec.		Maximum leak rate.
INSULATION RESISTANCE	See Insulation Resistance Table		Measured from terminal to terminal at rated DC voltage and 5 minutes charge time. Values greater than 1uF, allow an additional minute/uF charge time.

MINIMUM INSULATION RESISTANCE AT RATED DC VOLTAGE

FOR VALUES OVER 0.1uF DIVIDE LIMIT SHOWN BY uF TO OBTAIN MINIMUM I.R.
EXAMPLE: A 0.5uF, SERIES A12 CAPACITOR AT 25°C IS 300,000 ÷ 0.5 = 600,000 MEGOHMS.

RANGE	STYLE	25°C	55°C	85°C	100°C	125°C
.001 TO 0.1uF	A12	3,000,000 Megohms	2,000,000 Megohms	1,000,000 Megohms	300,000 Megohms	20,000 Megohms
	K12	1,000,000 Megohms	500,000 Megohms	100,000 Megohms	50,000 Megohms	10,000 Megohms
GREATER THAN 0.1uF	A12	300,000 Megohms-uF	200,000 Megohms-uF	100,000 Megohms-uF	30,000 Megohms-uF	2,000 Megohms-uF
	K12	100,000 Megohms-uF	50,000 Megohms-uF	10,000 Megohms-uF	5,000 Megohms-uF	1,000 Megohms-uF

A12 AND K12 QUALITY CONFORMANCE INSPECTION

TEST NO.	TEST	TEST CONDITIONS	TEST METH. MIL-C-83421	TEST LIMIT	QUALITY LEVEL A12	QUALITY LEVEL K12
1	BURN-IN	48 hrs. minimum at 125°C, at 140% rated DC voltage	4.7.2	No physical damage	100% Test	Not Req'd
2	THERMAL AGING	10 cycles minimum from −65°C to +125°C (5 cycles min. for K12)	4.7.3	No physical damage	100% Test	100% Test
3	SEAL TEST (FINE LEAK)	Helium bomb 45 PSI for 1 hr. minimum, check for helium leak	4.7.5	1×10^{-6} atm/cm³/sec. max.	100% Test	100% Test
4	SEAL TEST (GROSS LEAK)	Per MIL-C-83421	4.7.5	No continuous bubble stream	100% Test	100% Test
5	AC SQUARE WAVE (TERMINAL TO TERMINAL)	Apply 100Hz at a peak to peak voltage of 3 times DC rated voltage for 60 seconds minimum	4.7.6	No shorts	100% Test	100% Test
6	DC HI-POT (TERMINAL TO TERMINAL AND TERMINALS TO CASE)	Apply 200% of rated DC voltage for 60 seconds minimum. Do not exceed 800 volts peak to peak.	4.7.6	No shorts	100% Test	100% Test
7	INSULATION RESISTANCE (TERMINAL TO TERMINAL)	At 25°C at rated DC voltage	4.7.7	Per I.R. Table	100% Test	100% Test
8	% CAPACITANCE TOLERANCE	At 25°C at 1KHz	4.7.8.	Per part number	100% Test	100% Test
9	% DISSIPATION FACTOR	At 25°C at 1KHz, values above 1uF measure at 0.1KHz	4.7.9	0.15% max.	100% Test	100% Test
10	VISUAL AND MECHANICAL INSPECTION	For marking, dimensions, and workmanship	4.7.1	Per specification	1.0% AQL	1.0% AQL

1. Capacitors are packaged and shipped with Certification of Conformance. 2. Traceability to production and test records by permanent marking of parts with date code lot. 3. Process and inspection data is maintained on file per NHB 5300.4 (1C), MIL-Q-9858 and MIL-STD-790.

FOR SPECIAL VALUES AND TOLERANCES, PLEASE CONTACT OUR APPLICATION DEPARTMENT.

CASE DIMENSIONS	TOLERANCE LIMITS (INCHES)
"A" Diameter	±.010 Without Sleeving
	+0.02 −0.00 With Mylar Sleeving
"B" Case Length	±0.03 With or Without Sleeving
"C" Bead to Bead Max. Length	The lengths shown in table are maximum and include solder beads. CRC "C" dimensions for A12 and K12 capacitors is 0.1" less than MIL-C-83421/1 requires.

A12 | A | 104 | J | S | W

STYLE

VOLTAGE
A=30VDC
B=50VDC
C=100VDC
D=200VDC
E=400VDC

SLEEVING CODE
S=Mylar sleeve
X=No sleeve

LEAD CODE
W=Tinned copper clad steel: #22 (.025") for .312" case dia & smaller; #20 (.032") for .400" & .500" case dia.
C=Tinned oxygen-free copper: #18 (.040") for .562" case dia. & larger.

CAPACITANCE TOLERANCE
K=10% J=5% G=2% F=1% D=½% B=¼% A=.1%

PICOFARAD CODE: First two digits represent significant figures. Last digit represents number of zeros to follow. Example: 104 = 100,000 picofarads.

1. THE COMBINED DC AND AC VOLTAGES SHOULD NOT EXCEED THE DC RATINGS, SEE FIGURE.
2. CAPACITORS MAY BE OPERATED AT HIGHER FREQUENCIES, AT REDUCED RMS VOLTAGE SUCH THAT MAX. AC CURRENT RATINGS ARE NOT EXCEEDED.
3. CAPACITORS CAN HANDLE PULSE CURRENTS UP TO 100 TIMES GREATER THAN THE PEAK CURRENTS CALCULATED FROM THE RATED RMS RATING (PROVIDED SLOW REPETITION RATES ARE USED). IF THERE IS ANY DOUBT, A SKETCH OF THE VOLTAGE AND CURRENT WAVE FORMS WITH TIME BASE SHOULD BE SENT TO CRC FOR ANALYSIS.

COMPONENT RESEARCH CO.

METALLIZED POLYCARBONATE
G12

ESTABLISHED RELIABILITY CAPACITORS

PRODUCT FEATURES

2.5 μF 30VDC ACTUAL SIZE CAPACITOR

MINIATURE SIZE TO REPLACE NON-HERMETIC WRAP AND FILL, AND MOLDED CAPACITORS.

HERMETICALLY SEALED, HIGH RELIABILITY SCREENED FOR CRITICAL AEROSPACE APPLICATIONS.

AC RATED FROM 22VRMS TO 120VRMS AT FREQUENCIES UP TO 20KHz, −65°C to 100°C, WITH DERATED OPERATION AT 125°C. DC RATED 30VDC TO 200VDC.

100% RELIABILITY SCREENING, INCLUDES BURN-IN, TEMPERATURE CYCLING, FINE LEAK TESTS, AC SQUARE WAVE TESTS.

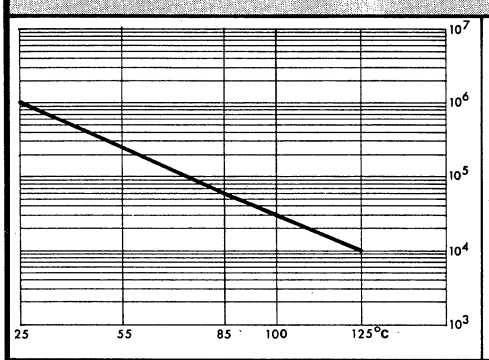
G12 CAPACITORS ARE PRESENTLY DESIGNED INTO MANY NAVY AND AIRFORCE PROGRAMS.

LOW LOSS, RUGGED INTERNAL TERMINATIONS QUALIFIED FOR ALL HI-REL PROGRAMS (CRC PATENTED CONSTRUCTION).

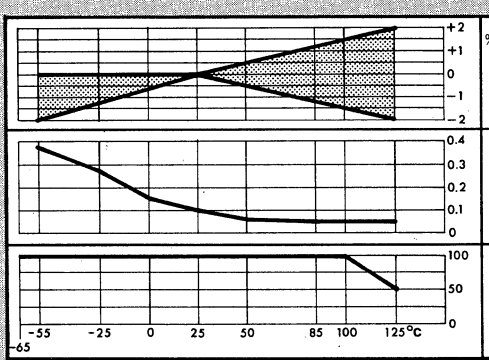
LOWEST PRICED, HIGH RELIABILITY, METALLIZED FILM CAPACITORS FOR HIGH VOLUME PROGRAM USE.

AVAILABLE IN STANDARD CAPACITANCE TOLERANCES, ±1%, ±2%, ±5%, ±10%. OTHER TOLERANCES AVAILABLE ON REQUEST.

TYPICAL CURVES



INSULATION RESISTANCE WITH TEMPERATURE IN MEGOHMS (0.1 μF OR LESS)



% CAPACITANCE CHANGE WITH TEMPERATURE

% DISSIPATION FACTOR WITH TEMPERATURE

% VOLTAGE RATING WITH TEMPERATURE

TYPICAL APPLICATIONS

- CRITICAL TIMING CIRCUITS
- FIXED TUNING CIRCUITS
- FILTERING
- TEMPERATURE COMPENSATION
- COUPLING AND DECOUPLING
- FEEDBACK CIRCUITS
- POWER SUPPLY FILTERING
- GYRO CIRCUITS
- PULSE FORMING NETWORKS
- INTEGRATING CIRCUITS

LIFE TEST DATA CRC TEST REPORT #78TR129

TEST RESULTS FOR 180 SERIES G12 CAPACITORS LIFE TESTED FOR 2000 HOURS AT 100°C AT 140% OF RATED DC VOLTAGE. THERE WERE NO FAILURES FOR THIS TEST.

METALLIZED POLYCARBONATE G12

ESTABLISHED RELIABILITY CAPACITORS

G12 SPECIFICATIONS

CONSTRUCTION	Metallized polycarbonate dielectric, hermetically sealed, extended metal film electrodes, axial leads isolated from case.	
ENVIRONMENTAL	Capacitors meet all environmental requirements of MIL-C-83421.	
OPERATING TEMPERATURE	−65°C to +100°C	At full rated voltage, derate linearly to 50% of rated voltage at 125°C.
DIELECTRIC ABSORPTION	0.1% maximum	At 25°C when measured per MIL-C-83421.
DISSIPATION FACTOR	0.15% maximum	At 25°C when measured per MIL-C-83421.
AC SQUARE WAVE	100Hz, 60 seconds minimum	At 25°C at a peak to peak voltage of 2 times rated DC voltage, terminal to terminal per MIL-C-83421.
DIELECTRIC STRENGTH	200% DC volts	At 25°C from terminal to terminal and terminal to case for 60 seconds minimum.
TEMPERATURE COEFFICIENT	±2% 0% to −2%	From 25°C to +125°C. From 25°C to −55°C.
CAPACITANCE STABILITY	±0.25%	When measured at any two corresponding temperature points taken in five successive temperature cycles from −65°C to +125°C.
HERMETIC SEAL	1×10^{-6}atm/cm³/sec.	Maximum leak rate.
INSULATION RESISTANCE	See I.R. Table	Measured from terminal to terminal at rated DC voltage and 5 minutes charge time. Values greater than 1uF, allow an additional minute/uF charge time.

MINIMUM INSULATION RESISTANCE AT RATED DC VOLTAGE

FOR VALUES OVER 0.1uF DIVIDE LIMIT SHOWN BY uF TO OBTAIN MINIMUM I.R. EXAMPLE: A 0.18uF CAPACITOR AT 25°C IS 100,000 ÷ 0.18 = 555,555 MEGOHMS.

RANGE	25°C	85°C	100°C	125°C
.001 TO 0.1uF	1,000,000 Megohms	60,000 Megohms	30,000 Megohms	10,000 Megohms
GREATER THAN 0.1uF	100,000 Megohms-uF	6,000 Megohms-uF	3,000 Megohms-uF	1,000 Megohms-uF

G12 QUALITY CONFORMANCE INSPECTION

TEST NO.	TEST	TEST CONDITIONS	TEST METH. MIL-C-83421	TEST LIMIT	QUALITY LEVEL
1	BURN-IN	48 hrs. minimum at 125°C, at 140% rated DC voltage	4.7.2	No physical damage	100% Test
2	THERMAL AGING	10 cycles minimum from −65°C to +125°C	4.7.3	No physical damage	100% Test
3	SEAL TEST (FINE LEAK)	Helium bomb 45 PSI for 1 hr. minimum, check for helium leak	4.7.5	1×10^{-6}atm/cm³/sec. max.	100% Test
4	SEAL TEST (GROSS LEAK)	Per MIL-C-83421	4.7.5	No continuous bubble stream	100% Test
5	AC SQUARE WAVE (TERMINAL TO TERMINAL)	Apply 100Hz at a peak to peak voltage of 2 times DC rated voltage for 60 seconds minimum	4.7.6	No shorts	100% Test
6	DC HI-POT (TERMINAL TO TERMINAL AND TERMINALS TO CASE)	Apply 200% of rated DC voltage for 60 seconds minimum	4.7.6	No shorts	100% Test
7	INSULATION RESISTANCE (TERMINAL TO TERMINAL)	At 25°C at rated DC voltage	4.7.7	100,000 megohm-uF, need not exceed 1,000,000 megohms	100% Test
8	% CAPACITANCE TOLERANCE	At 25°C at 1KHz	4.7.8	Per part number	100% Test
9	% DISSIPATION FACTOR	At 25°C at 1KHz, values above 1uF measure at 0.1KHz	4.7.9	0.15% max.	100% Test
10	VISUAL AND MECHANICAL INSPECTION	For marking, dimensions, and workmanship	4.7.1	Per specification	1.0% AQL

1. Capacitors are packaged and shipped with Certification of Conformance. **2.** Traceability to production and test records by permanent marking of parts with date code lot. **3.** Process and inspection data is maintained on file per NHB 5300.4 (1C), MIL-Q-9858 and MIL-STD-790.

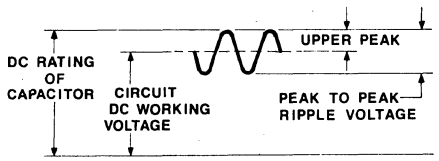
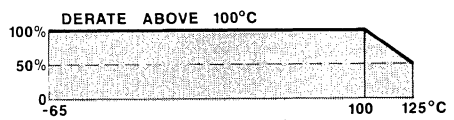
1. THE COMBINED DC AND AC VOLTAGES SHOULD NOT EXCEED THE DC RATINGS, SEE FIGURE.
2. CAPACITORS MAY BE OPERATED AT HIGHER FREQUENCIES, AT REDUCED RMS VOLTAGE SUCH THAT MAX. AC CURRENT RATINGS ARE NOT EXCEEDED.
3. CAPACITORS CAN HANDLE PULSE CURRENTS UP TO 100 TIMES GREATER THAN THE PEAK CURRENTS CALCULATED FROM THE RATED RMS RATING (PROVIDED SLOW REPETITION RATES ARE USED). IF THERE IS ANY DOUBT, A SKETCH OF THE VOLTAGE AND CURRENT WAVE FORMS WITH TIME BASE SHOULD BE SENT TO CRC FOR ANALYSIS.





COMPONENT RESEARCH CO., INC. ▪ 1655 26TH STREET ▪ SA.. A MONICA. CALIF. 90404 ▪ (213) 829-3615. TWX: (910) 343-6864

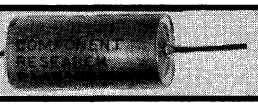
CRC COMPONENT RESEARCH CO.

METALLIZED POLYSULFONE P14

ESTABLISHED RELIABILITY CAPACITORS

PRODUCT FEATURES

1.0 μF 50VDC ACTUAL SIZE CAPACITOR



MINIATURE SIZE - RATED TO 150°C OPERATION.

HERMETICALLY SEALED, HIGH RELIABILITY AC SCREENED FOR AEROSPACE APPLICATIONS.

AC RATED FROM 36VRMS TO 240VRMS AT FREQUENCIES UP TO 20KHz, −65°C TO 125°C WITH 50% DERATED OPERATION AT 150°C.

DC RATED FROM 50VDC TO 400VDC, −65°C TO 125°C WITH 50% DERATED OPERATION AT 150°C.

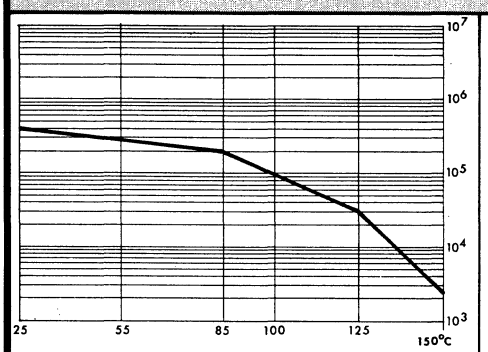
P14 CAPACITORS ARE SCREENED PER MIL-C-83421, AND ARE PRESENTLY DESIGNED INTO MANY MILITARY PROGRAMS.

LOW LOSS, RUGGED INTERNAL TERMINATIONS, QUALIFIED FOR ALL HIGH RELIABILITY PROGRAMS (CRC PATENTED CONSTRUCTION).

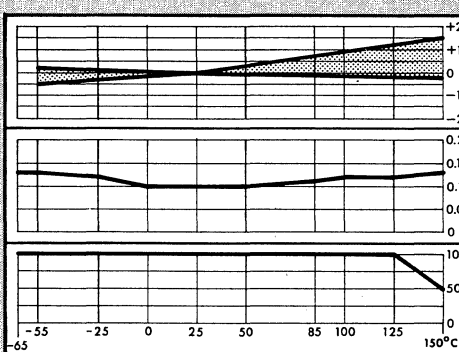
LOW CAPACITANCE DRIFT AND TC, HIGH INSULATION RESISTANCE.

AVAILABLE IN STANDARD CAPACITANCE TOLERANCES ±1%, ±2%, ±5%, ±10%. OTHER TOLERANCES AVAILABLE ON REQUEST.

TYPICAL CURVES



INSULATION RESISTANCE WITH TEMPERATURE IN MEGOHMS (0.1 μF OR LESS)



% CAPACITANCE CHANGE WITH TEMPERATURE

% DISSIPATION FACTOR WITH TEMPERATURE

% VOLTAGE RATING WITH TEMPERATURE

TYPICAL APPLICATIONS

- CRITICAL TIMING CIRCUITS
- FIXED TUNING CIRCUITS
- FILTERING
- TEMPERATURE COMPENSATION
- COUPLING AND DECOUPLING
- FEEDBACK CIRCUITS
- POWER SUPPLY FILTERING
- GYRO CIRCUITS
- PULSE FORMING NETWORKS
- INTEGRATING CIRCUITS

LIFE TEST DATA CRC TEST REPORT #78TR129

TEST RESULTS FOR 180 SERIES H14 CAPACITORS LIFE TESTED FOR 2000 HOURS AT 125°C AT 140% OF RATED DC VOLTAGE. THERE WERE NO FAILURES FOR THIS TEST. H14 CAPACITORS ARE THE SAME CONSTRUCTION AND DESIGN AS P14.

CRC COMPONENT RESEARCH CO.

METALLIZED POLYSULFONE P14

ESTABLISHED RELIABILITY CAPACITORS

P14 SPECIFICATIONS

CONSTRUCTION	Metallized polysulfone dielectric, hermetically sealed, extended metal film electrodes, axial leads isolated from case.	
ENVIRONMENTAL	Capacitors meet all environmental requirements of MIL-C-83421.	
OPERATING TEMPERATURE	−65°C to +125°C	At full rated voltage, derated linearly to 50% of rated voltage at 150°C.
DIELECTRIC ABSORPTION	0.1% maximum	At 25°C when measured per MIL-C-83421.
DISSIPATION FACTOR	0.15% maximum	At 25°C when measured per MIL-C-83421.
AC SQUARE WAVE	100Hz, 60 seconds minimum	At 25°C at a peak to peak voltage of 2 times rated DC voltage, terminal to terminal per MIL-C-83421.
DIELECTRIC STRENGTH	150% rated DC voltage	At 25°C from terminal to terminal and terminals to case for 60 seconds minimum.
TEMPERATURE COEFFICIENT	+1.5% to −1.0% +0.5% to −0.5%	From 25°C to +150°C. From 25°C to −55°C.
CAPACITANCE STABILITY	±0.25%	When measured at any two corresponding temperature points taken in five successive temperature cycles from −65°C to +150°C.
HERMETIC SEAL	1 × 10^{-6}atm/cm^3/sec.	Maximum leak rate.
INSULATION RESISTANCE	See I.R. Table	Measured from terminal to terminal at rated DC voltage and 5 minutes charge time. Values greater than 1uF, allow an additional minute/uF charge time.

MINIMUM INSULATION RESISTANCE AT RATED DC VOLTAGE

FOR VALUES OVER 0.5uF DIVIDE LIMIT SHOWN BY uF TO OBTAIN MINIMUM I.R. EXAMPLE: A 0.68uF CAPACITOR AT 25°C IS 200,000 ÷ 0.68 = 294,117 MEGOHMS.

RANGE	25°C	85°C	125°C	150°C
.001 TO 0.5uF	400,000 Megohms	200,000 Megohms	30,000 Megohms	2,500 Megohms
GREATER THAN 0.5uF	200,000 Megohms-uF	100,000 Megohms-uF	15,000 Megohms-uF	1,250 Megohms-uF

P14 QUALITY CONFORMANCE INSPECTION

TEST NO.	TEST	TEST CONDITIONS	TEST METH. MIL-C-83421	TEST LIMIT	QUALITY LEVEL
1	BURN-IN	48 hrs. minimum at 125°C, at 120% rated AC voltage at 400Hz	4.7.2	No physical damage	100% Test
2	THERMAL AGING	10 cycles minimum from −65°C to +125°C	4.7.3	No physical damage	100% Test
3	SEAL TEST (FINE LEAK)	Helium bomb 45 PSI for 1 hr. minimum, check for helium leak	4.7.5	1x10^{-6}atm/cm^3/sec. max.	100% Test
4	SEAL TEST (GROSS LEAK)	Per MIL-C-83421	4.7.5	No continuous bubble stream	100% Test
5	AC SQUARE WAVE (TERMINAL TO TERMINAL)	Apply 100Hz at a peak to peak voltage of 2 times DC rated voltage for 60 seconds minimum	4.7.6	No shorts	100% Test
6	DC HI-POT (TERMINAL TO TERMINAL AND TERMINALS TO CASE)	Apply 150% of rated DC voltage for 60 seconds minimum	4.7.6	No shorts	100% Test
7	INSULATION RESISTANCE (TERMINAL TO TERMINAL)	At 25°C at rated DC voltage	4.7.7	200,000 megohm-uF, need not exceed 400,000 megohms	100% Test
8	% CAPACITANCE TOLERANCE	At 25°C at 1KHz	4.7.8	Per part number	100% Test
9	% DISSIPATION FACTOR	At 25°C at 1KHz, values above 1uF measure at 0.1KHz	4.7.9	0.15% max.	100% Test
10	VISUAL AND MECHANICAL INSPECTION	For marking, dimensions, and workmanship	4.7.1	Per specification	1.0% AQL

1. Capacitors are packaged and shipped with Certification of Conformance. 2. Traceability to production and test records by permanent marking of parts with date code lot. 3. Process and inspection data is maintained on file per NHB 5300.4 (1C), MIL-Q-9858 and MIL-STD-790.

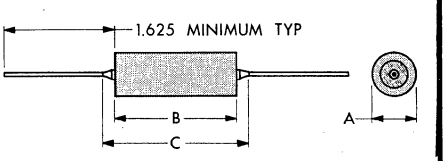
FOR SPECIAL VALUES AND TOLERANCES, PLEASE CONTACT OUR APPLICATION DEPARTMENT.



CASE DIMENSIONS	TOLERANCE LIMITS (INCHES)
"A" Diameter	±0.010 Without Sleeving
	+0.02 −0.00 With Mylar Sleeving
"B" Case Length	±0.03 With or Without Sleeving
"C" Bead to Bead Max. Length	The lengths shown in table are maximum and include solder beads

P14	B	104	J	S	W

STYLE

VOLTAGE
B=50VDC
C=100VDC
Y=150VDC
D=200VDC
V=300VDC
E=400VDC

SLEEVING CODE
S=Mylar sleeve
X=No sleeve

LEAD CODE
W=Tinned copper clad steel: #22 (.025") for .312" case dia. & smaller; #20 (.032") for .400" & .500" case dia.
C=Tinned oxygen-free copper: #18 (.040") for .562" case dia. & larger.

CAPACITANCE TOLERANCE
K=10% G=2% D=½%
J=5% F=1% B=¼%

PICOFARAD CODE: First two digits represent significant figures. Last digit represents number of zeros to follow. Example: 104 = 100,000 picofarads.

1. THE COMBINED DC AND AC VOLTAGES SHOULD NOT EXCEED THE DC RATINGS, SEE FIGURE.
2. CAPACITORS MAY BE OPERATED AT HIGHER FREQUENCIES, AT REDUCED RMS VOLTAGE SUCH THAT MAX. AC CURRENT RATINGS ARE NOT EXCEEDED.
3. CAPACITORS CAN HANDLE PULSE CURRENTS UP TO 100 TIMES GREATER THAN THE PEAK CURRENTS CALCULATED FROM THE RATED RMS RATING (PROVIDED SLOW REPETITION RATES ARE USED). IF THERE IS ANY DOUBT, A SKETCH OF THE VOLTAGE AND CURRENT WAVE FORMS WITH TIME BASE SHOULD BE SENT TO CRC FOR ANALYSIS.

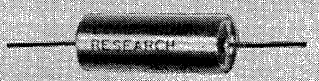
CRC
COMPONENT RESEARCH CO.

METALLIZED TEFLON J11 & K11

ESTABLISHED RELIABILITY CAPACITORS

PRODUCT FEATURES

.068 μF 50VDC ACTUAL SIZE CAPACITOR



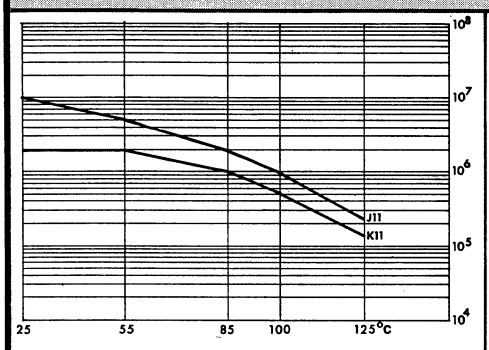
HIGH INSULATION RESISTANCE: 10,000,000 MEGOHMS MINIMUM. (FOR J11 SERIES, ALL VALUES UP TO 0.1uF).

LOW DIELECTRIC ABSORPTION: 0.01% MAXIMUM VOLTAGE RECOVERY.

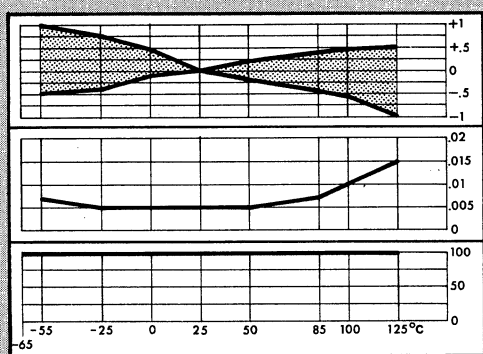
LONG TERM STABILITY: LESS THAN 0.5% CAPACITANCE DRIFT AFTER 2000 HRS. AT 125°C AT RATED VOLTS.

SERIES 11 CAPACITORS HAVE BEEN QUALIFIED FOR USE IN SPACE AND MISSILE SYSTEMS WHERE MAXIMUM RELIABILITY AND LOW DIELECTRIC LOSS ARE ESSENTIAL.

TYPICAL CURVES



INSULATION RESISTANCE WITH TEMPERATURE IN MEGOHMS (0.1 μF OR LESS)



TYPICAL APPLICATIONS

- CRITICAL TIMING CIRCUITS
- FIXED TUNING CIRCUITS
- TEMPERATURE COMPENSATION
- COUPLING AND DECOUPLING
- FEEDBACK CIRCUITS
- GYRO CIRCUITS
- INTEGRATING CIRCUITS

LIFE TEST DATA CRC TEST REPORT #XT1303

TEST RESULTS FOR 80 SERIES D11B CAPACITORS LIFE TESTED FOR 2000 HOURS AT 125°C AT 140% OF RATED DC VOLTAGE. THERE WERE NO FAILURES FOR THIS TEST. D11B CAPACITORS ARE THE SAME CONSTRUCTION AND DESIGN AS J11-K11 SERIES.

CRC COMPONENT RESEARCH CO.

METALLIZED TEFLON J11

ESTABLISHED RELIABILITY CAPACITORS

J11 SPECIFICATIONS

CONSTRUCTION	Metallized teflon dielectric, hermetically sealed, extended metal film electrodes, axial leads isolated from case.	
ENVIRONMENTAL	Capacitors meet all environmetal requirements of MIL-C-83421, except vibration at 20g and shock at 50g.	
OPERATING TEMPERATURE	−65°C to +125°C	At full rated voltage.
DIELECTRIC ABSORPTION	0.01% maximum	At 25°C when measured per MIL-C-83421.
DISSIPATION FACTOR	0.05% maximum	At 25°C when measured per MIL-C-83421.
DIELECTRIC STRENGTH	200% rated voltage	At 25°C from terminal to terminal and terminals to case for 60 seconds minimum.
TEMPERATURE COEFFICIENT	Referenced to 25°C −55°C −25°C 0°C 50°C 85°C 100°C 125°C	 From −0.5% to +1.0% From −0.35% to +0.75% From −0.1% to +0.45% From −0.2% to +0.2% From −0.45% to +0.4% From −0.65% to +0.45% From −1.0% to +0.5%
CAPACITANCE STABILITY	±0.10%	When measured at any two corresponding temperature points taken in five successive temperature cycles from −65°C to +125°C.
HERMETIC SEAL	1×10^{-6}atm/cm³/sec.	Maximum leak rate.
INSULATION RESISTANCE	See I.R. Table	Measured from terminal to terminal at rated DC voltage and 5 minutes charge time. Values greater than 1uF, allow an additional minute/uF charge time.

MINIMUM INSULATION RESISTANCE AT RATED DC VOLTAGE

FOR VALUES OVER 0.1uF DIVIDE LIMIT SHOWN BY uF TO OBTAIN MINIMUM I.R. EXAMPLE: A 0.68uF CAPACITOR AT 25°C IS 1,000,000 ÷ 0.68 = 1,475,000 MEGOHMS.

RANGE	25°	55°C	85°C	100°C	125°C
.001 TO 0.1uF	10,000,000 Megohms	5,000,000 Megohms	2,000,000 Megohms	1,000,000 Megohms	250,000 Megohms
GREATER THAN 0.1uF	1,000,000 Megohms-uF	500,000 Megohms-uF	200,000 Megohms-uF	100,000 Megohms-uF	25,000 Megohms-uF

J11 QUALITY CONFORMANCE INSPECTION

TEST NO.	TEST	TEST CONDITIONS	TEST METH. MIL-C-83421	TEST LIMIT	QUALITY LEVEL
1	BURN-IN	48 hrs. minimum at 125°C, at 140% rated DC voltage	4.7.2	No physical damage	100% Test
2	THERMAL AGING	10 cycles minimum from −65°C to +125°C	4.7.3	No physical damage	100% Test
3	SEAL TEST (FINE LEAK)	Helium bomb 45 PSI for 1 hr. minimum, check for helium leak	4.7.5	1×10^{-6}atm/cm³/sec. max.	100% Test
4	SEAL TEST (GROSS LEAK)	Per MIL-C-83421	4.7.5	No continuous bubble stream	100% Test
5	DC HI-POT (TERMINAL TO TERMINAL AND TERMINALS TO CASE)	Apply 200% of rated DC voltage for 60 seconds minimum	4.7.6	No shorts	100% Test
6	INSULATION RESISTANCE (TERMINAL TO TERMINAL)	At 25°C at rated DC voltage	4.7.7	Per I.R. Table	100% Test
7	% CAPACITANCE TOLERANCE	At 25°C at 1KHz	4.7.8	Per part number	100% Test
8	% DISSIPATION FACTOR	At 25°C at 1KHz, values above 1uF measure at 0.1KHz	4.7.9	0.05% max.	100% Test
9	VISUAL AND MECHANICAL INSPECTION	For marking, dimensions, and workmanship	4.7.1	Per specification	1.0% AQL

1. Capacitors are packaged and shipped with Certification of Conformance. **2.** Traceability to production and test records by permanent marking of parts with date code lot. **3.** Process and inspection data is maintained on file per NHB 5300.4 (1C), MIL-Q-9858 and MIL-STD-790.

ESTABLISHED RELIABILITY CAPACITORS

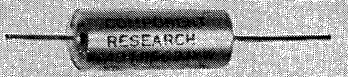
PRODUCT FEATURES

.056 μF 50VDC ACTUAL SIZE CAPACITOR



AC AND DC RATED TO 150°C AT FULL RATED VOLTAGE.

HERMETICALLY SEALED, HIGH RELIABILITY SCREENED FOR CRITICAL AEROSPACE APPLICATIONS.

AC RATED FROM 36VRMS TO 240VRMS AT FREQUENCIES FROM 0 TO 400 Hz. RATINGS AT 40KHz AT LOWER VOLTAGE RATINGS.

HIGH INSULATION RESISTANCE, 10,000,000 MEGOHMS MINIMUM. ALL VALUES UP TO 0.1uF.

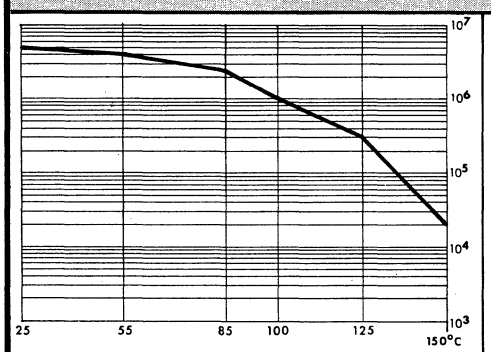
LOW DIELECTRIC ABSORPTION, 0.01% MAXIMUM VOLTAGE RECOVERY.

LOW LOSS, RUGGED INTERNAL TERMINATIONS FOR ALL HI-REL PROGRAMS (CRC PATENTED CONSTRUCTION).

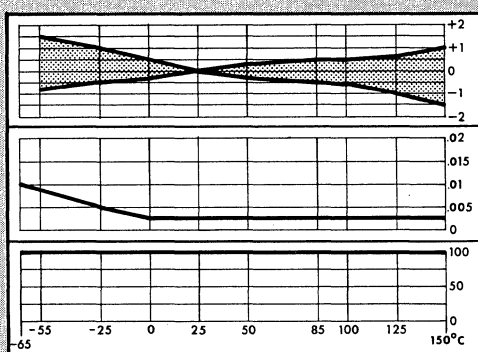
0.1% MAXIMUM SHELF DRIFT FOR 10 YEARS (OR IN NORMAL USE).

AVAILABLE IN 1%, 2%, 5% AND 10%, CAPACITANCE TOLERANCE FROM 50VDC TO 400VDC. OTHER TOLERANCES AVAILABLE ON REQUEST.

TYPICAL CURVES



INSULATION RESISTANCE WITH TEMPERATURE IN MEGOHMS (0.1 μF OR LESS)



TYPICAL APPLICATIONS

- CRITICAL TIMING CIRCUITS
- FIXED TUNING CIRCUITS
- FILTERING
- TEMPERATURE COMPENSATION
- COUPLING AND DECOUPLING
- FEEDBACK CIRCUITS
- POWER SUPPLY FILTERING
- GYRO CIRCUITS
- PULSE FORMING NETWORKS
- INTEGRATING CIRCUITS

LIFE TEST DATA CRC TEST REPORT #XT-1306

TEST RESULTS FOR D51 SERIES CAPACITORS LIFE TESTED FOR 2000 HOURS AT 125°C AT 140% OF RATED DC VOLTAGE. THERE WERE NO FAILURES FOR THIS TEST. D51 CAPACITORS ARE THE SAME CONSTRUCTION AND DESIGN AS A91.

CRC COMPONENT RESEARCH CO.

FOIL TEFLON A91

ESTABLISHED RELIABILITY CAPACITORS

A91 SPECIFICATIONS

CONSTRUCTION	Foil teflon, hermetically sealed, extended metallized film electrodes, foil axial leads isolated from case.	
ENVIRONMENTAL	Capacitors meet all environmetal requirements of MIL-C-83421, except vibration at 20g and shock at 50g.	
OPERATING TEMPERATURE	−65°C to +150°C	At full rated voltage.
DIELECTRIC ABSORPTION	0.01% maximum	At 25°C when measured per MIL-C-83421.
DISSIPATION FACTOR	0.02% maximum	At 25°C when measured per MIL-C-83421.
AC SQUARE WAVE	100Hz, 60 seconds minimum	At 25°C at a peak to peak voltage of 3 times rated DC voltage, terminal to terminal per MIL-C-83421.
DIELECTRIC STRENGTH	200% rated DC voltage	At 25°C from terminal to terminal and terminals to case for 60 seconds minimum.
TEMPERATURE COEFFICIENT	Referenced to 25°C −55°C −25°C 0°C 50°C 85°C 100°C 125°C 150°C	 +1.5% to −0.8% +1.0% to −0.5% +0.5% to −0.3% +0.3% to −0.3% +0.5% to −0.5% +0.5% to −0.8% +0.6% to −1.0% +1.0% to −1.5%
CAPACITANCE STABILITY	±0.25%	When measured at any two corresponding temperature points taken in five successive temperature cycles from −65°C to +125°C.
HERMETIC SEAL	1×10^{-6}atm/cm³/sec.	Maximum leak rate.
INSULATION RESISTANCE	See I.R. Table	Measured from terminal to terminal at rated DC voltage and 5 minutes charge time. Values greater than 1uF, allow an additional minute/uF charge time.

MINIMUM INSULATION RESISTANCE AT RATED DC VOLTAGE

RANGE	25°C	85°C	100°C	125°C	150°C
.001 TO 0.2uF	10,000,000 Megohms	2,000,000 Megohms	1,000,000 Megohms	250,000 Megohms	20.000 Megohms
GREATER THAN 0.2uF	1,000,000 Megohms	200,000 Megohms	100,000 Megohms	25,000 Megohms	2,000 Megohms

A91 QUALITY CONFORMANCE INSPECTION

TEST NO.	TEST	TEST CONDITIONS	TEST METH. MIL-C-83421	TEST LIMIT	QUALITY LEVEL
1	BURN-IN	16 hrs. minimum at 125°C at 140% AC rated voltage, at 400Hz or 240VRMS, whichever is less	4.7.2	No physical damage	100% Test
2	THERMAL AGING	5 cycles minimum from −65°C to +125°C	4.7.3	No physical damage	100% Test
3	SEAL TEST (FINE LEAK)	Helium bomb for 45 PSI for 1 hr. minimum, check for helium leak	4.7.5	1x10⁻⁶atm/cm³/sec. max.	100% Test
4	SEAL TEST (GROSS LEAK)	Per MIL-C-83421	4.7.5	No continuous bubble stream	100% Test
5	AC SQUARE WAVE (TERMINAL TO TERMINAL)	Apply 100Hz at a peak to peak voltage of 3 times DC rated voltage for 60 seconds minimum. Do not exceed 800 volts peak to peak.	4.7.6	No shorts	100% Test
6	DC HI-POT (TERMINAL TO TERMINAL AND TERMINALS TO CASE)	Apply 200% of rated DC voltage for 60 seconds minimum	4.7.6	No shorts	100% Test
7	INSULATION RESISTANCE (TERMINAL TO TERMINAL)	At 25°C at rated DC voltage	4.7.7	Per I.R. Table	100% Test
8	% CAPACITANCE TOLERANCE	At 25°C at 1KHz	4.7.8	Per part number	100% Test
9	% DISSIPATION FACTOR	At 25°C at 1KHz, values above 1uF measure at 0.1KHz	4.7.9	0.02% max.	100% Test
10	VISUAL AND MECHANICAL INSPECTION	For marking, dimensions, and workmanship	4.7.1	Per specification	1.0% AQL

1. Capacitors are packaged and shipped with Certification of Conformance. 2. Traceability to production and test records by permanent marking of parts with date code lot. 3. Process and inspection data is maintained on file per NHB 5300.4 (1C), MIL-Q-9858 and MIL-STD-790.

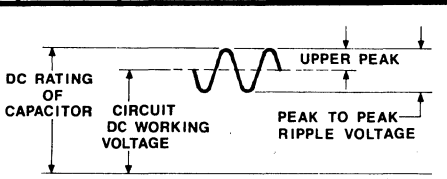
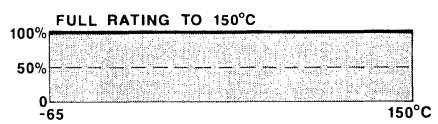
1. THE COMBINED DC AND AC VOLTAGES SHOULD NOT EXCEED THE DC RATINGS, SEE FIGURE.
2. CAPACITORS MAY BE OPERATED AT HIGHER FREQUENCIES, AT REDUCED RMS VOLTAGE SUCH THAT MAX. AC CURRENT RATINGS ARE NOT EXCEEDED.
3. CAPACITORS CAN HANDLE PULSE CURRENTS UP TO 100 TIMES GREATER THAN THE PEAK CURRENTS CALCULATED FROM THE RATED RMS RATING (PROVIDED SLOW REPETITION RATES ARE USED). IF THERE IS ANY DOUBT, A SKETCH OF THE VOLTAGE AND CURRENT WAVE FORMS WITH TIME BASE SHOULD BE SENT TO CRC FOR ANALYSIS.





COMPONENT RESEARCH CO., INC. ▪ 1655 26TH STREET ▪ SANTA MONICA, CALIF. 90404 ▪ (213) 829-3615, TWX: (910) 343-6864

CRC COMPONENT RESEARCH CO.

POLYSTYRENE K93

ESTABLISHED RELIABILITY CAPACITORS

PRODUCT FEATURES

.056 μF 50VDC ACTUAL SIZE CAPACITOR

5,000,000 MEGOHMS MIN. INSULATION RESISTANCE FOR VALUES 0.2uF AND LESS.

0.02% MAXIMUM DIELECTRIC ABSORPTION.

0.1% MAXIMUM SHELF DRIFT FOR 10 YEARS (OR IN NORMAL USE).

UTILIZES CRC UNIQUE PATENTED, RUGGED, LOW LOSS LEAD TERMINATIONS, QUALIFIED FOR ALL HI-REL PROGRAMS.

HERMETICALLY SEALED, HIGH RELIABILITY SCREENED FOR CRITICAL AEROSPACE PROGRAMS.

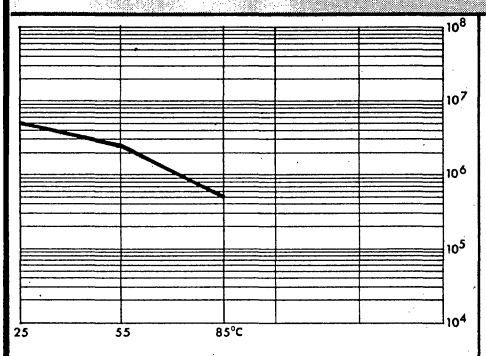
100% RELIABILITY SCREENING, INCLUDES TEMPERATURE CYCLING, FINE LEAK TEST, AC SQUARE WAVE TEST.

SIMILAR GENERIC PARTS HAVE BEEN QUALIFIED FOR TRIDENT PROGRAM.

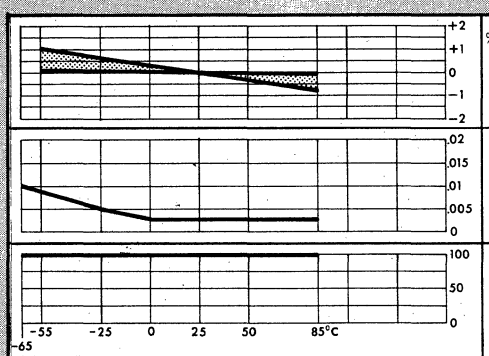
AVAILABLE IN ±0.1% TO ±10% CAPACITANCE TOLERANCE FROM 50VDC TO 400VDC.

AC AND DC RATED.

TYPICAL CURVES



INSULATION RESISTANCE WITH TEMPERATURE IN MEGOHMS (0.1 μF OR LESS)



% CAPACITANCE CHANGE WITH TEMPERATURE

% DISSIPATION FACTOR WITH TEMPERATURE

% VOLTAGE RATING WITH TEMPERATURE

TYPICAL APPLICATIONS

- CRITICAL TIMING CIRCUITS
- FIXED TUNING CIRCUITS
- FILTERING
- TEMPERATURE COMPENSATION
- COUPLING AND DECOUPLING
- FEEDBACK CIRCUITS
- POWER SUPPLY FILTERING
- GYRO CIRCUITS
- PULSE FORMING NETWORKS
- INTEGRATING CIRCUITS

LIFE TEST DATA CRC TEST REPORT #XT1304

TEST RESULTS FOR 75 SERIES N53 CAPACITORS LIFE TESTED FOR 2000 HOURS AT +85°C AT 140% OF RATED DC VOLTAGE. THERE WERE NO FAILURES FOR THIS TEST. N53 CAPACITORS ARE THE SAME CONSTRUCTION AND DESIGN AS K93 SERIES CAPACITORS.

CRC COMPONENT RESEARCH CO.

POLYSTYRENE K93

ESTABLISHED RELIABILITY CAPACITORS

K93 SPECIFICATIONS

OPERATING TEMPERATURE	−65°C to 85°C	At full rated voltage.
DIELECTRIC ABSORPTION	0.02% maximum	At 25°C when measured per MIL-C-83421.
DISSIPATION FACTOR	0.02% maximum	At 25°C when measured per MIL-C-83421.
DIELECTRIC STRENGTH	200% rated voltage	At 25°C from terminal to terminal and terminals to case for 60 seconds minimum.
TEMPERATURE COEFFICIENT	−80 ±50 PPM/°C −60 ±50 PPM/°C	For values 0.001uF to 0.0082uF For values 0.01uF to 2.7uF Special polystyrene capacitors can be supplied with a temperature coefficient of −20 to −100 PPM/°C that is linear to ±30 PPM/°C and ±10 PPM/°C. A wide selection is available of large uF values in bathtub and custom cases.
CAPACITANCE STABILITY	0.03% maximum Drift	With five cycles from −25°C to +85°C
HERMETIC SEAL	1×10^{-6}atm/cm³/sec.	Maximum leak rate.
INSULATION RESISTANCE	See I.R. Table	Measured from terminal to terminal at rated DC voltage and 5 minutes charge time. Values greater than 1uF, allow an additional minute/uF charge time.

MINIMUM INSULATION RESISTANCE AT RATED DC VOLTAGE

FOR VALUES OVER 1.0uF DIVIDE LIMIT SHOWN BY uF TO OBTAIN MINIMUM I.R. EXAMPLE: A 2.0uF CAPACITOR AT 25°C IS 1,000,000 ÷ 2 = 500,000 MEGOHMS.

RANGE	25°C	55°C	85°C
0.001 TO 0.1uF	10,000,000 Megohms	5,000,000 Megohms	1,000,000 Megohms
GREATER THAN 0.1uF	1,000,000 Megohms-uF	500,000 Megohms-uF	100,000 Megohms-uF

K93 QUALITY CONFORMANCE INSPECTION

TEST NO.	TEST	TEST CONDITIONS	TEST METH. MIL-C-83421	TEST LIMIT	QUALITY LEVEL
1	THERMAL AGING	From −65°C to +85°C, 5 cycles min.	4.7.3	There shall be no physical damage	100% Test
2	SEAL TEST (FINE LEAK)	Helium bomb 45 PSI for 1 hr. minimum, check for helium leak	4.7.5	1x10⁻⁶atm/cm³/sec. max.	100% Test
3	SEAL TEST (GROSS LEAK)	Place in 85°C hot water for 60 seconds minimum and observe for bubbles	4.7.5	No continuous bubble stream	100% Test
4	AC SQUARE WAVE (TERMINAL TO TERMINAL)	Apply 100Hz square wave at a peak to peak voltage of 3 times DC rated voltage for 60 seconds minimum. Do not exceed 800 volts peak to peak.	4.7.6	No shorts	100% Test
5	DC HI-POT (TERMINAL TO TERMINAL AND TERMINALS TO CASE)	Apply 200% of rated DC voltage for 60 seconds minimum	4.7.6	No shorts	100% Test
6	INSULATION RESISTANCE (TERMINAL TO TERMINAL)	At 25°C at rated DC voltage	4.7.7	Per I.R. Table	100% Test
7	% CAPACITANCE TOLERANCE	At 25°C at 1KHz	4.7.8	Per part number	100% Test
8	% DISSIPATION FACTOR	At 25°C at 1KHz, values above 1uF measured at 0.1KHz	4.7.9	0.02% max.	100% Test
9	VISUAL AND MECHANICAL INSPECTION	For marking, dimensions, and workmanship as required.	4.7.1	Per specification	1.0% AQL

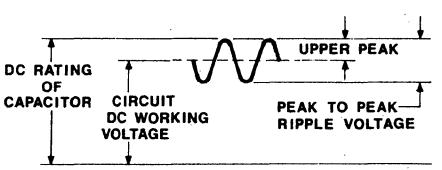
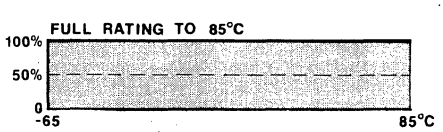
1. THE COMBINED DC AND AC VOLTAGES SHOULD NOT EXCEED THE DC RATINGS, SEE FIGURE.
2. CAPACITORS MAY BE OPERATED AT HIGHER FREQUENCIES, AT REDUCED RMS VOLTAGE SUCH THAT MAX. AC CURRENT RATINGS ARE NOT EXCEEDED.
3. CAPACITORS CAN HANDLE PULSE CURRENTS UP TO 100 TIMES GREATER THAN THE PEAK CURRENTS CALCULATED FROM THE RATED RMS RATING (PROVIDED SLOW REPETITION RATES ARE USED). IF THERE IS ANY DOUBT, A SKETCH OF THE VOLTAGE AND CURRENT WAVE FORMS WITH TIME BASE SHOULD BE SENT TO CRC FOR ANALYSIS.





COMPONENT RESEARCH CO., INC. ▪ 1655 26TH STREET ▪ SANTA MONICA, CALIF. 90404 ▪ (213) 829-3615, TWX: (910) 343-6864

CRC COMPONENT RESEARCH CO.

DOUBLE LAYER A10

ESTABLISHED RELIABILITY CAPACITORS

A10 SPECIFICATIONS

CONSTRUCTION	Type A10 capacitors utilize a dual layer construction as extra assurance clearings that low resistance faults will not occur. See Index for Capacitor Fault Scanning.	
OPERATING TEMPERATURE	−65°C to +100°C	At full rated voltage, derate linearly to 50% of rated voltage at 125°C.
DIELECTRIC ABSORPTION	0.1% maximum	At 25°C when measured per MIL-C-83421.
DISSIPATION FACTOR	0.15% maximum	At 25°C when measured per MIL-C-83421.
AC SQUARE WAVE	100Hz, 60 seconds minimum	At 25°C at a peak to peak voltage of 3 times rated DC voltage, terminal to terminal per MIL-C-83421.
DIELECTRIC STRENGTH	200% DC volts	At 25°C from terminal to terminal and terminals to case for 60 seconds minimum.
TEMPERATURE COEFFICIENT	±1% 0% to −2%	From 25°C to +125°C. From 25°C to −55°C.
CAPACITANCE STABILITY	±0.2%	When measured at any two corresponding temperature points taken in five successive temperature cycles from −65°C to +125°C.
HERMETIC SEAL	1×10^{-6} atm/cm³/sec.	Maximum leak rate.
INSULATION RESISTANCE	See I.R. Table	Measured from terminal to terminal at rated DC voltage and 5 minutes charge time. Values greater than 1uF, allow an additional minute/uF charge time.

MINIMUM INSULATION RESISTANCE AT RATED DC VOLTAGE

FOR VALUES OVER 0.1uF DIVIDE LIMIT SHOWN BY uF TO OBTAIN MINIMUM I.R. EXAMPLE: A 0.18uF CAPACITOR AT 25°C IS 300,000 ÷ 0.18 = 1,666,666 MEGOHMS.

RANGE	25°C	85°C	100°C	125°C
.001 TO 0.1uF	3,000,000 Megohms	500,000 Megohms	200,000 Megohms	20,000 Megohms
GREATER THAN 0.1uF	300,000 Megohms-uF	50,000 Megohms-uF	20,000 Megohms-uF	2,000 Megohms-uF

A10 QUALITY CONFORMANCE INSPECTION

TEST NO.	TEST	TEST CONDITIONS	TEST METH. MIL-C-83421	TEST LIMIT	QUALITY LEVEL
1	BURN-IN	48 hrs. minimum at 125°C, at 140% rated DC voltage	4.7.2	No physical damage	100% Test
2	THERMAL AGING	10 cycles minimum from −65°C to +125°C	4.7.3	No physical damage	100% Test
3	SEAL TEST (FINE LEAK)	Helium bomb 45 PSI for 1 hr. minimum, check for helium leak	4.7.5	1x10 ⁶atm/cm³/sec. max.	100% Test
4	SEAL TEST (GROSS LEAK)	Per MIL-C-83421	4.7.5	No continuous bubble stream	100% Test
5	AC SQUARE WAVE (TERMINAL TO TERMINAL)	Apply 100Hz at a peak to peak voltage of 3 times DC rated voltage for 60 seconds minimum	4.7.6	No shorts	100% Test
6	DC HI-POT (TERMINAL TO TERMINAL AND TERMINALS TO CASE)	Apply 200% of rated DC voltage for 60 seconds minimum	4.7.6	No shorts	100% Test
7	INSULATION RESISTANCE (TERMINAL TO TERMINAL)	At 25°C at rated DC voltage	4.7.7	300,000 megohm-uF need not exceed 3,000,000 megohms	100% Test
8	% CAPACITANCE TOLERANCE	At 25°C at 1KHz	4.7.8	Per part number	100% Test
9	% DISSIPATION FACTOR	At 25°C at 1KHz, values above 1uF measure at 0.1KHz	4.7.9	0.15% max.	100% Test
10	VISUAL AND MECHANICAL INSPECTION	For marking, dimensions, and workmanship	4.7.1	Per specification	1.0% AQL

1. Capacitors are packaged and shipped with Certification of Conformance. 2. Traceability to production and test records by permanent marking of parts with date code lot. 3. Process and inspection data is maintained on file per NHB 5300.4 (1C), MIL-Q-9858 and MIL-STD-790.

CRC COMPONENT RESEARCH CO.

FOIL POLYSULFONE A54

ESTABLISHED RELIABILITY CAPACITORS

A54 SPECIFICATIONS

CONSTRUCTION	Polysulfone dielectric, extended foil electrodes, hermetically sealed, leads isolated from case.	
ENVIRONMENTAL	Capacitors meet all environmental requirements of MIL-C-83421 except vibration and shock. Vibration is at 20g's and shock at 50g's.	
OPERATING TEMPERATURE	−65°C to +125°C	At full rated voltage, derate linearly to 50% of rated voltage at 150°C.
DIELECTRIC ABSORPTION	0.1% maximum	At 25°C when measured per MIL-C-83421.
DISSIPATION FACTOR	0.1% maximum	At 25°C when measured per MIL-C-83421.
AC SQUARE WAVE	100Hz, 60 seconds minimum	At 25°C at a peak to peak voltage of 3 times rated DC voltage, terminal to terminal per MIL-C-83421.
DIELECTRIC STRENGTH	200% DC volts	At 25°C from terminal to terminal and terminals to case for 60 seconds minimum.
TEMPERATURE COEFFICIENT	±2% maximum capacitance change	From −55°C to +150°C.
CAPACITANCE STABILITY	±0.25%	When measured at any two corresponding temperature points taken in five successive temperature cycles from −65°C to +125°C.
HERMETIC SEAL	1×10^{-6} atm/cm³/sec.	Maximum leak rate.
INSULATION RESISTANCE	See I.R. Table	Measured from terminal to terminal at rated DC voltage and 5 minutes charge time. Values greater than 1uF, allow an additional minute/uF charge time.

MINIMUM INSULATION RESISTANCE AT RATED DC VOLTAGE

FOR VALUES OVER 0.1uF DIVIDE LIMIT SHOWN BY uF TO OBTAIN MINIMUM I.R. EXAMPLE: A 0.18uF CAPACITOR AT 25°C is 100,000 ÷ 0.18 = 555,000 MEGOHMS.

RANGE	25°C	85°C	125°C	150°C
.001 TO 0.1uF	1,000,000 Megohms	500,000 Megohms	30,000 Megohms	2,500 Megohms
GREATER THAN 0.1uF	100,000 Megohms-uF	50,000 Megohms-uF	3,000 Megohms-uF	250 Megohms-uF

A54 QUALITY CONFORMANCE INSPECTION

TEST NO.	TEST	TEST CONDITIONS	TEST METH. MIL-C-83421	TEST LIMIT	QUALITY LEVEL
1	BURN-IN	48 hours minimum at 125°C, at 120% rated AC voltage at 400Hz not to exceed 240VRMS	4.7.2	No physical damage	100% Test
2	THERMAL AGING	10 cycles minimum from −65°C to +125°C	4.7.3	No physical damage	100% Test
3	SEAL TEST (GROSS LEAK)	Per MIL-C-83421	4.7.5	No continuous bubble stream	100% Test
4	AC SQUARE WAVE (TERMINAL TO TERMINAL)	Apply 100Hz at a peak to peak voltage of 3 times DC rated voltage for 60 sec. min. Do not exceed 800 volts peak to peak.	4.7.6	No shorts	100% Test
5	DC HI-POT (TERMINAL TO TERMINAL) AND TERMINALS TO CASE)	Apply 200% of rated DC voltage for 60 seconds minimum	4.7.6	No shorts	100% Test
6	INSULATION RESISTANCE (TERMINAL TO TERMINAL)	At 25°C at rated DC voltage	4.7.7	100,000 megohms-uF, need not exceed 1,000,000 megohms	100% Test
7	% CAPACITANCE TOLERANCE	At 25°C at 1KHz	4.7.8	Per part number	100% Test
8	% DISSIPATION FACTOR	At 25°C at 10KHz	4.7.9	.15 maximum	100% Test
9	VISUAL AND MECHANICAL INSPECTION	For marking, dimensions, and workmanship as required.	4.7.1	Per specification	1.0% AQL

1. THE COMBINED DC AND AC VOLTAGES SHOULD NOT EXCEED THE DC RATINGS, SEE FIGURE.
2. CAPACITORS MAY BE OPERATED AT HIGHER FREQUENCIES, AT REDUCED RMS VOLTAGE SUCH THAT MAX. AC CURRENT RATINGS ARE NOT EXCEEDED.
3. TYPE A54 CAPACITORS CAN HANDLE MUCH HIGHER PULSE REPETITION RATES THAN METALLIZED CAPACITORS.

ESTABLISHED RELIABILITY CAPACITORS

SPECIFICATIONS & QUALITY CONFORMANCE

400VRMS, 600VRMS, RATED FROM −65°C TO +125°C

Series B54 capacitors are designed for continuous duty operation over the full temperature range from −65°C to +125°C at rated voltage, current and frequency.

The maximum RMS current or peak current can be exceeded with reduced duty cycle or tone burst operation, provided the peak rated voltages are not exceeded, and provided the heat rise measured at the terminals and within ¼" of the hermetic seals does not exceed 20°C.

Heat rise is measured with the capacitor located in a room temperature environment allowing for non-cooled normal convection. Lead size and distance to the power source must be adequate to prevent undue heat sinking or heat generation during measurement.

HIGH CURRENT HANDLING WITH LOW LOSS

Series B54 capacitors have very low series resistance terminations, measuring in the range of several milliohms at 100KHz, and can handle very high peak current discharge currents. Typically it is estimated that a 1uF capacitor can handle over 3000 amperes of peak current at repetition rates up to 10 pulses per second. Testing is now in process to develop meaningful pulse current limits to be added to future specifications for B54 capacitors.

FREEDOM FROM CORONA INCEPTION AND INTERNAL HOT SPOTS

CRC capacitors use a patented low loss termination which remains reliable after years of operation under severe environmental conditions. Whereas commercial type AC rated capacitors may be adequate for 60Hz and possibly 400Hz long term life, the use of CRC terminations enables these capacitors to operate up to 40KHz without abnormal hot spot conditions or corona inception.

40KHz RATED FOR HIGH CURRENT HANDLING UP TO 125°C

CRC capacitors will operate efficiently up to approximately 400KHz at their maximum current rated conditions. Typically a capacitor that is 1uF and is rated at 10 amps at 40KHz will be handling 40VRMS at 40KHz. This capacitor when operated at 400KHz at 4VRMS will handle approximately 10ARMS current.

CRC has higher frequency, lower loss, higher power capacitors in the planning stage for future applications that seek for higher frequency power sources.

HERMETICALLY SEALED, RUGGED AEROSPACE, MILITARY CONSTRUCTION

CRC true hermetic sealing preserves the high quality performance of Series B54 foil polysulfone capacitors and protects the dielectric materials from chemical attack. Merely potting non-hermetic type capacitors is poor insurance against long term loss of dielectric strength and life. It has been found that attack by vapor ingestion of chemicals of non-hermetic polysulfone capacitors has resulted in failure in life or long term operation.

AVAILABLE WITH 400Hz OR 40KHz BURN-IN OPTIONS

AC burn-in options at additional cost are available for critical applications. The most economical AC burn-in is at rated RMS voltage @ 400Hz at 125°C. Burn-in @ 400KHz at maximum rated current is also available for those applications where long term use at high current is anticipated. Group "A" testing is performed 100%. This testing consists of vital capacitor parameters performed after burn-in to tight specification limits. This ensures the high reliability required to assure our customers of fault free operation under harsh operating conditions.

ORDERING INFORMATION: All part numbers listed in tables have a capacitance tolerance of ±10% and are supplied with bare metal (unsleeved) cases.

TECHNICAL INFORMATION: These capacitors can be damaged when you solder to the lead wires due to possible overheating that can occur. Place a suitable heat sink on the lead wire between the solder beads on the hermetic seal and the area of wire lead to be soldered.

For initial design, when operating the capacitors at high current levels it is suggested that you monitor the capacitor heat rise on the leads adjacent to the solder beads to verify that it does not exceed 20°C above ambient.

All maximum current ratings shown should result in less than 20°C heat rise with continuous duty operation under normal convection conditions.

Avoid tearing of solder beads when bending wire leads by using a suitable clamping fixture for lead bending.

METALLIZED POLYSULFONE B14

ESTABLISHED RELIABILITY CAPACITORS

SPECIFICATIONS & QUALITY CONFORMANCE

400VRMS, 600VRMS, RATED FROM −65°C TO +125°C

Series B14 capacitors are designed for continuous duty operation over the full temperature range from −65°C to +125°C at the ratings for voltage, current and frequency listed in the specifications.

The maximum RMS current or peak current can be exceeded with reduced duty cycle or tone burst operation, provided the peak rated voltages are not exceeded, and provided the heat rise measured at the terminals and within ¼″ of the hermetic seals does not exceed 20°C.

Heat rise is measured with the capacitor located in a room temperature environment allowing for non-cooled normal convection. Lead size and distance to the power source must be adequate to prevent undue heat sinking or heat generation during measurement.

HIGH CURRENT HANDLING WITH LOW LOSS

Series B14 capacitors have terminations slightly higher in resistance than Series B54 capacitors and can be used in pulse applications where the peak currents generally do not exceed 100 times B14 RMS current ratings and where the repetition rate is less than 10 pulses per second.

Testing is now in process to develop pulse current limits to be added to future specifications for B14 capacitors. Series B14 capacitors are smaller in size and lighter in weight than Series B54 foil polysulfone capacitors.

FREEDOM FROM CORONA INCEPTION AND INTERNAL HOT SPOTS

CRC capacitors use a patented low loss termination which remains reliable after years of operation under severe environmental conditions. Whereas commercial type AC rated capacitors may be adequate for 60Hz and possibly 400Hz long term life, the use of CRC terminations enables these capacitors to operate up to 40KHz without abnormal hot spot conditions or corona inception.

40KHz RATED FOR HIGH CURRENT HANDLING UP TO 125°C

CRC capacitors will operate efficiently up to approximately 400KHz at their maximum current rated conditions. Typically a capacitor that is 1uF and is rated at 10 amps at 40KHz will be handling 40VRMS at 40KHz. This capacitor when operated at 400KHz at 4VRMS will handle approximately 10ARMS current.

CRC has higher frequency, lower loss, higher power capacitors in the planning stage for future applications that seek for higher frequency power sources.

HERMETICALLY SEALED, RUGGED AEROSPACE, MILITARY CONSTRUCTION

CRC true hermetic sealing preserves the high quality performance of Series B14 foil polysulfone capacitors and protects the dielectric materials from chemical attack. Merely potting non-hermetic type capacitors is poor insurance against long term loss of dielectric strength and life. It has been found that attack by vapor ingestion of chemicals of non-hermetic polysulfone capacitors has resulted in failure in life or long term operation.

AVAILABLE WITH 400Hz OR 40KHz BURN-IN OPTIONS

AC burn-in options at additional cost are available for critical applications. The most economical AC burn-in is at rated RMS voltage @ 400Hz at 125°C. Burn-in @ 400KHz at maximum rated current is also available for those applications where long term use at high current is anticipated. Group "A" testing is performed 100%. This testing consists of vital capacitor parameters performed after burn-in to tight specification limits. This ensures the high reliability required to assure our customers of fault free operation under harsh operating conditions.

ORDERING INFORMATION: All part numbers listed in tables have a capacitance tolerance of ±10% and are supplied with bare metal (unsleeved) cases.

TECHNICAL INFORMATION: These capacitors can be damaged when you solder to the lead wires due to possible overheating that can occur. Place a suitable heat sink on the lead wire between the solder beads on the hermetic seal and the area of wire lead to be soldered.

For initial design, when operating the capacitors at high current levels it is suggested that you monitor the capacitor heat rise on the leads adjacent to the solder beads to verify that it does not exceed 20°C above ambient.

All maximum current ratings shown should result in less than 20°C heat rise with continuous duty operation under normal convection conditions.

Avoid tearing of solder beads when bending wire leads by using a suitable clamping fixture for lead bending.

FOIL POLYPROPYLENE B55

ESTABLISHED RELIABILITY CAPACITORS

SPECIFICATIONS & QUALITY CONFORMANCE

400VRMS, 600VRMS, RATED FROM −55°C TO +85°C (HIGHER RATINGS AVAILABLE)

Series B55 capacitors are designed for continuous duty operation over the full temperature range from −55°C to +85°C at the rating for voltage, current and frequency listed in the specifications.

The maximum RMS current or peak current can be exceeded with reduced duty cycle or tone burst operation, provided that peak rated voltages are not exceeded, and provided the heat rise measured at the terminals and within ¼" of the hermetic seals does not exceed 20°C.

Heat rise is generally measured with the capacitor located in a room temperature environment allowing for non-cooled normal convection. Lead size and distance to the power source must be adequate to prevent undue heat sinking or generation during measurement.

HIGH CURRENT HANDLING WITH LOW LOSS

Series B55 capacitors have very low series resistance terminations, in the range of several milliohms at 100KHz, and can handle very high peak current discharge currents. Typically it is estimated that a 1uF capacitor can handle over 3000 amperes of peak current at repetition rates up to 10 pulses per second. Testing is now in process to develop meaningful pulse current limits to be added to future specifications for B55 capacitors.

FREEDOM FROM CORONA INCEPTION AND INTERNAL HOT SPOTS

Commercial type AC rated capacitors may be adequate for 60Hz and possibly 400Hz long term life. CRC capacitors are designed to operate up to 40KHz without abnormal hot spot conditions, without corona inception, with constant controlled low loss terminations which remain reliable after years of use, after operation during severe environmental conditions.

40KHz RATED FOR HIGH CURRENT HANDLING UP TO 85°C

CRC capacitors use a patented low loss termination which remains reliable after years of operation under severe environmental conditions. Whereas commercial type AC rated capacitors may be adequate for 60Hz and possibly 400Hz long term life, the use of CRC terminations enables these capacitors to operate up to 40KHz without abnormal hot spot conditions or corona inception.

HERMETICALLY SEALED, RUGGED AEROSPACE, MILITARY CONSTRUCTION

CRC true hermetic sealing preserves the high quality performance of Series B55 foil polypropylene capacitors and protects the dielectric materials from chemical attack. Merely potting non-hermetic type capacitors is poor insurance against long term loss of dielectric strength and life. It has been found that attack by vapor ingestion of chemicals of non-hermetic polypropylene capacitors has resulted in failure in life or long term operation.

AVAILABLE WITH 400Hz OR 40KHz BURN-IN OPTIONS

AC burn-in options at additional cost are available for critical applications. The most economical AC burn-in is at rated RMS voltage @ 400Hz at 85°C. Burn-in @ 40KHz at maximum rated current is also available for those applications where long term use at high current is anticipated. Group "A" testing is performed 100%. This testing consists of vital capacitor parameters performed after burn-in to tight specification limits. This ensures the high reliability required to assure our customers of fault free operation under harsh operating conditions.

CRC COMPONENT RESEARCH CO.

METALLIZED POLYPROPYLENE B15

ESTABLISHED RELIABILITY CAPACITORS

SPECIFICATIONS & QUALITY CONFORMANCE

400VRMS, 600VRMS, RATED −55°C TO +85°C

Series B15 metallized polypropylene capacitors have lower loss than Series B14 metallized polysulfone capacitors and therefore are superior for power resonating applications requiring minimum loss. The B15 capacitors are however limited for use in 85°C or lower temperature applications. CRC can supply special high temperature low loss teflon capacitors for 200°C power resonating applications if required.

When Series B15 specifications are completed, RMS ratings above 600VRMS will be available together with information covering this product line.

LOW LOSS, HIGH Q, LIGHT WEIGHT, HIGH POWER RATED, HERMETICALLY SEALED

The B15 capacitors are lighter in weight than any other hermetically sealed capacitor with equivalent current and voltage ratings at 40KHz. Typically a 5.6uF, 400VRMS, capacitor in a 1.25″ x 3.440″ case weighs approximately 110 grams and is rated to handle 35 amps at 40KHz.

Polypropylene film like many other dielectrics is affected by chemical attack of solvents, epoxies and contamination. True hermetic sealing of CRC's capacitors protects them from outside chemical attack and assures that long term high quality performance can be maintained.

RUGGED LOW LOSS TERMINATIONS FOR 100% DUTY CYCLE OPERATING LIFE

The large amount of power that B15 capacitors can handle is a result of years of development searching for all possible means of reducing capacitor losses and preserving the integrity of CRC's rugged capacitor terminations. When CRC's metallized polypropylene capacitors are subjected to temperature extremes, they surpass commercial type products in their ability to maintain a constant low loss equivalent series resistance and can maintain their low power factor for critical aerospace applications. Where extremely high pulse currents may be encountered Series B55 should be considered.

AC RATED TO 40KHz UP TO 85°C

Series B15 capacitors are rated up to 40KHz and are ideal for power resonating circuits. Due to a negative temperature coefficient of approximately 200 PPM/°C a 10°C temperature increase due to applied power or applied temperature will cause the capacitance to decrease approximately 0.2%.

CRC's polysulfone capacitors increase a maximum of only 0.05% in capacitance for 10°C increase when operated above 25°C.

AVAILABLE WITH AC BURN-IN AND OTHER SCREENING OPTIONS

CRC manufactures larger capacitors of similar construction to the B15 series in rectangular cases for power inverter applications requiring low loss filtering of several hundreds of amperes of ripple at frequencies 20KHz and higher.

Further developments in lowering capacitor losses are currently being completed at CRC and will result in further improved ratings for B15 and other new model capacitors.

ORDERING INFORMATION: All part numbers listed in tables have a capacitance tolerance of ±10% and are supplied with bare metal (unsleeved) cases.

TECHNICAL INFORMATION: These capacitors can be damaged when you solder to the lead wires due to possible overheating that can occur. Place a suitable heat sink on the lead wire between the solder beads on the hermetic seal and the area of wire lead to be soldered.

For initial design, when operating the capacitors at high current levels it is suggested that you monitor the capacitor heat rise on the leads adjacent to the solder beads to verify that it does not exceed 20°C above ambient.

All maximum current ratings shown should result in less than 20°C heat rise with continuous duty operation under normal convection conditions.

Avoid tearing of solder beads when bending wire leads by using a suitable clamping fixture for lead bending.

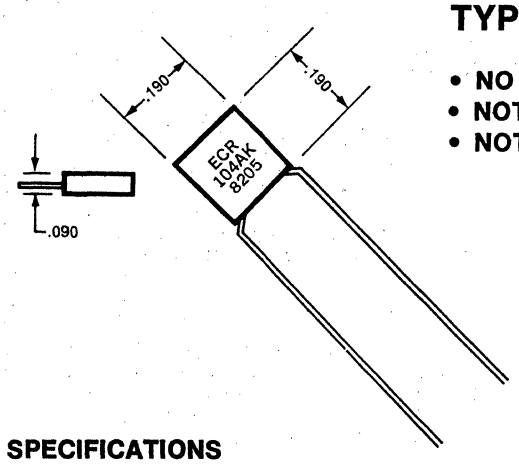
AVIONICAPS® *The smallest film capacitor in the world*

METALLIZED POLYCARBONATE

TYPE ECR



- **NO PIEZOELECTRIC EFFECT**
- **NOT FREQUENCY SENSITIVE**
- **NOT VOLTAGE SENSITIVE**

A new innovation pioneered by Electronic Concepts leads the way to a new era of smaller metallized film capacitors. Now a combination of excellent electrical characteristics and compactness is offered the equipment designer in a size equal to a ceramic CK05 capacitor.

Besides the superior electrical characteristics Type ECR are self-healing, as is the case with all metallized capacitors.

Additionally, these capacitors do not exhibit any of the drawbacks inherent in all ceramic capacitors.

SPECIFICATIONS

Operating Temperature Range: −55°C to +125°C without derating.

Dissipation Factor: When measured at the frequency specified for capacitance measurements, the dissipation factor shall not exceed 0.3%.

Insulation Resistance: When measured at the applicable test temperature, and rated voltage, the insulation resistance shall equal or exceed the following values:

	25°C	85°C	125°C
Megohm x Microfarads	100,000	7,000	700
Except the insulation resistance in megohms need not exceed	200,000	70,000	7,000

Capacitance Change: The Capacitance change vs. temperature for these capacitors shall not exceed the following:

Temperature Degrees C.	−55	+25	+85	+125
Percent Change	±1.5	0	±0.3	±0.8

The measurement at each temperature shall be recorded when two successive readings taken at 5-minute intervals indicate no change in capacitance.

Capacitance Tolerance: Standard Tolerance is ±10%. Tolerances of ±20%, ±5%, ±2% and ±1% are available.

Note: Capacitance shall be measured at 25°C, and at or referred to a frequency of 1KHz.

Capacitance Range

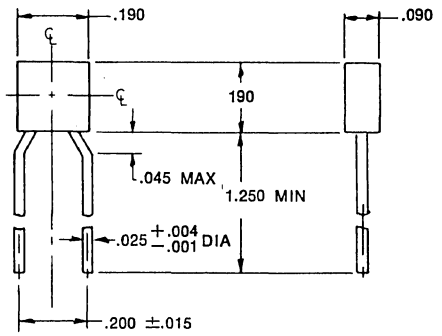
ESTABLISHED RELIABILITY CAPACITORS

FIXED, PLASTIC DIELECTRIC, DC, IN NON-METAL CASES PER MIL-C-55514

STYLE CFR12



World's smallest film capacitor (CKO size) now available as CFR12.

Dielectric: metallized polycarbonate film.

Construction: molded rectangular case, radial leaded. See previous page **AVIONICAPS®**

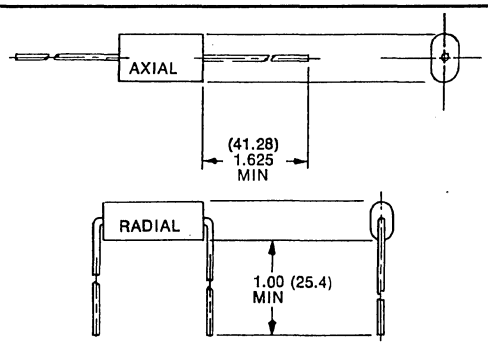
Capacitance values in MFD:

.0010 thru .10 30V	.0012 thru .0082 150V
.0010 thru .056 50V	.0012 thru .0056 200V
.0010 thru .027 75V	.0012 thru .0033 250V
.0010 thru .018 100V	

Capacitance tolerance: ±1%, ±2%, ±5%, ±10%

Refer to MIL-C-55514 for additional specifics or call Electronic Concepts, Inc.

STYLE CFR06



Dielectric: metallized plastic film

Characteristic R: metallized polycarbonate
N: metallized polyester

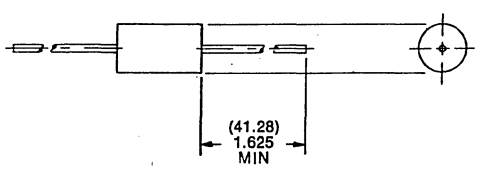
Construction: oval configuration, axial or radial leaded

Capacitance values in MFD:

Characteristic "R"	Characteristic "N"
.0010 thru 50.0 50V	.010 thru 10.0 200V
.0010 thru 20.0 100V	.010 thru 3.3 400V

Capacitance tolerance:
"R" ±1%, ±2%, ±5%, ±10%
"N" ±2%, ±5%, ±10%

STYLE CFR05



Dielectric: metallized polycarbonate plastic film. Characteristic R.

Construction: round configuration, axial leaded.

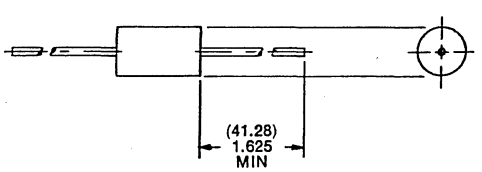
Capacitance values in MFD:

.0010 thru 50.0 50V	.010 thru 10.0 200V
.0010 thru 20.0 100V	.010 thru 5.0 400V

Capacitance tolerance: ±1%, ±2%, ±5%, ±10%

Refer to MIL-C-55514 for additional specifics or call Electronic Concepts, Inc.

STYLE CFR02



Dielectric: plastic film

Characteristic M: polyester film and foil
Q: polycarbonate film and foil

Construction: Round configuration, axial leaded

Capacitance values in MFD:

Characteristic "M"	Characteristic "Q"
.0068 thru 1.0 100V	.0010 thru 1.0 100V
.0010 thru 1.0 200V	.0010 thru 1.0 200V
.0018 thru 1.0 400V	
.0010 thru 0.1 600V	

Capacitance tolerance:
"M" ±2%, ±5%, ±10%
"Q" ±1%, ±2%, ±5%, ±10%

Refer to MIL-C-55514 for additional specifics or call Electronic Concepts, Inc.

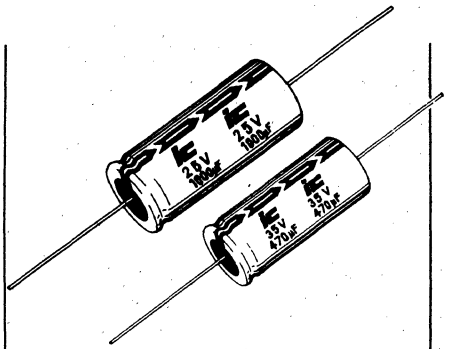
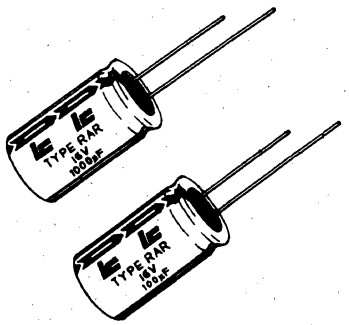
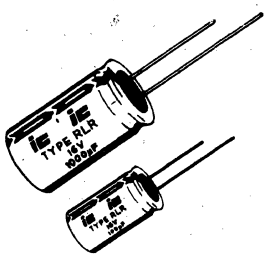
DEPENDABILITY



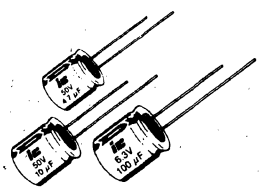
TYPE TTA COMMERCIAL/INDUSTRIAL ELECTROLYTIC CAPACITORS
0.47 Mfd. To 33,000 Mfd.
6.3 WVDC To 500 WVDC
−40°C To +85°C Min.
2000 HOUR +85°C Rating
EPOXY END SEAL Optional (TTA-PX)
TAPE & REEL Avail.



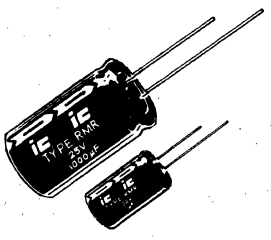
TYPE RAR COMMERCIAL/INDUSTRIAL ELECTROLYTIC CAPACITORS
0.47 Mfd. To 4,700 Mfd.
6.3 WVDC To 450 WVDC
−40°C To +85°C Min.
2000 HOUR, +85°C Rating
EPOXY END SEAL Optional (RAR-PX)
TAPE & REEL Avail.



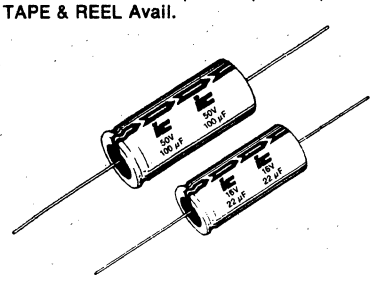
TYPE RLR LOW-LEAKAGE ELECTROLYTIC CAPACITORS
0.1 Mfd. To 2,200 Mfd.
6.3 WVDC To 50 WVDC
−40°C To +85°C Min.
Leakage Current: ≤0.002CV or 0.4 uA min.
EPOXY END SEAL Optional (RLR-PX)
TAPE & REEL Avail.



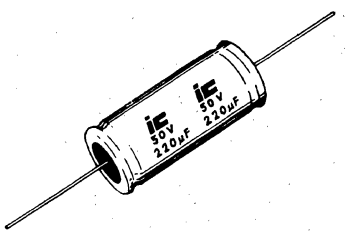
TYPE RSS SUB-SUBMINIATURE ELECTROLYTIC CAPACITORS
0.1 Mfd. To 100 Mfd.
6.3 WVDC To 50 WVDC
Min. Dia. 0.15 in./4.0mm
Max. Length .28 in./7.0mm
−40° C To +85° C Min.
TAPE & REEL Avail.



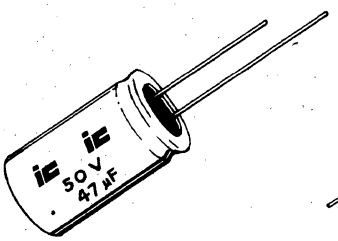
TYPE RMR SUBMINIATURE, +105°C ELECTROLYTIC CAPACITORS
0.47 Mfd. To 10,000 Mfd.
6.3 WVDC To 250 WVDC
−40°C To +105°C Min.
2000 HOUR +105°C Rating
EPOXY END SEAL Optional (RMR-PX)
TAPE & REEL Avail.



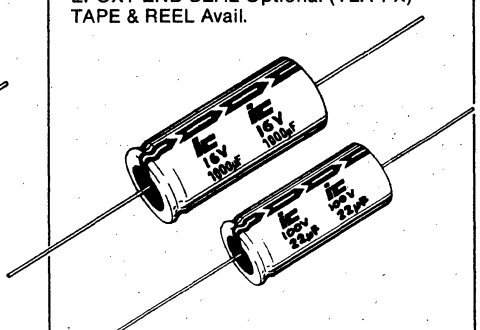
TYPE TLA LOW LEAKAGE ELECTROLYTIC CAPACITORS
0.1 Mfd. To 100 Mfd.
6.3 WVDC To 50 WVDC
−40° C To +85° C Min.
Leakage Current: ≤0.002 CV or 0.4 µA min.
EPOXY END SEAL Optional (TLA-PX)
TAPE & REEL Avail.



TYPE BPA NON-POLARIZED ELECTROLYTIC CAPACITORS
0.47 Mfd. To 1,000 Mfd.
10 WVDC To 200 WVDC
−40°C To +85°C Min.
1000 HOUR +85° Rating
EPOXY END SEAL Optional (BPA-PX)



TYPE BPR NON-POLARIZED ELECTROLYTIC CAPACITORS
0.47 Mfd. To 1,000 Mfd.
10 WVDC To 50 WVDC
−40 °C To +85°C Min.
1000 HOUR +85°C Rating
EPOXY END SEAL Optional (BPR-PX)



TYPE THA +125°C OPERATION ELECTROLYTIC CAPACITORS
0.47 Mfd. To 1,000 Mfd.
10 WVDC To 100 WVDC
−40°C To +125°C Min.
EPOXY END SEAL Optional (THA-PX)

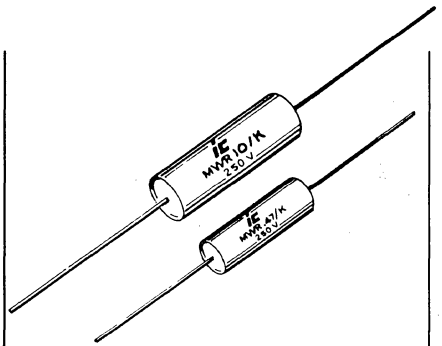
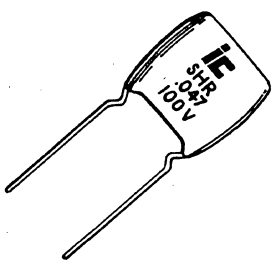
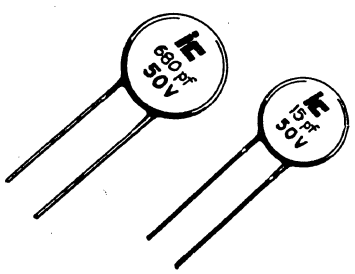
AVAILABILITY



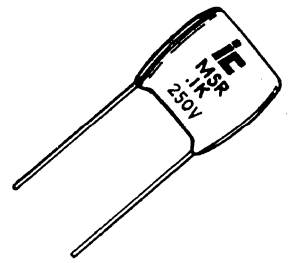
TYPE MWR METALLIZED MYLAR® POLYESTER FILM CAPACITORS
WRAP & FILLED CONSTRUCTION
NON-INDUCTIVE WINDING, + 125°C
100 WVDC To 1,000 WVDC
0.01 Mfd. To 22 Mfd.
TOLERANCE: ±10% (±5% Opt.)



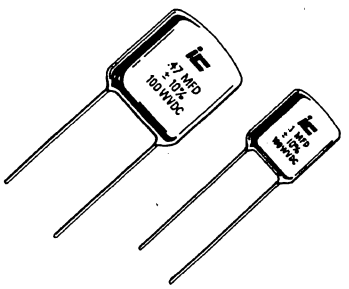
TYPE SHR POLYESTER FILM CAPACITORS
NON-INDUCTIVE WINDING, + 125°C
100 WVDC
0.001 Mfd. To .47 Mfd.
TOLERANCE: ±10% (±5% Opt.)



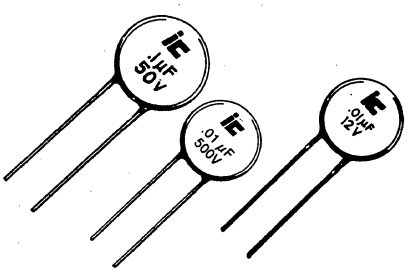
TYPE BCR TEMPERATURE STABLE CERAMIC DISC CAPACITORS
50 WVDC
1 pf to 680 pf
TEMP. CHAR.: Y5F
TOLERANCE: ±10%



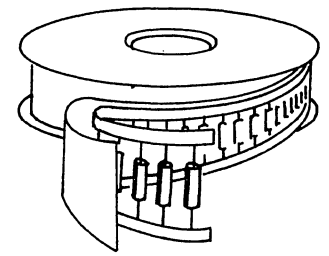
TYPE MSR METALLIZED MYLAR® POLYESTER FILM CAPACITORS
NON-INDUCTIVE WINDING, + 125°C
250 WVDC To 1,000 WVDC
0.01 Mfd. To 10 Mfd.
TOLERANCE: ±10% (±5%, Opt.)



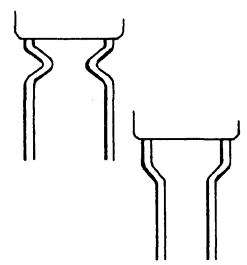
TYPE UMR POLYESTER FILM CAPACITORS
INDUCTIVE WINDING
100 WVDC
.001 Mfd. To .47 Mfd.
TOLERANCE: ±10% (±5%, Opt.)



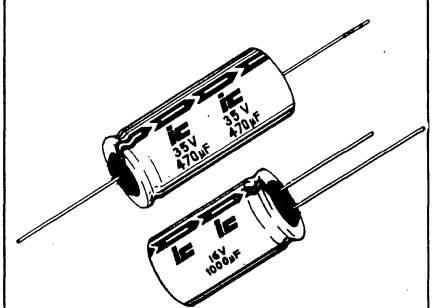
GENERAL PURPOSE CERAMIC DISC
Tolerances: −20% +80%, ±20%
TYPE GCR: 50 WVDC
0.001 Mfd. To 0.1 Mfd. (Y5V, Y5S)
TYPE GMR: 12 WVDC
0.047 Mfd. To .47 Mfd. (Y5S)
TYPE GQR: 500 WVDC
.001 Mfd. To .01 Mfd. (Z5V)



TAPE & REEL CONFIGURATIONS
FOR AUTOMATIC INSERTION OF AXIAL AND RADIAL LEAD PARTS
AVAILABLE ON SPECIAL ORDER



CUT & FORMED LEADS
AVAILABLE ON SPECIAL ORDER



EPOXY END SEALS
AVAILABLE OPTION ON ALL ELECTROLYTIC CAPACITORS
FOR USE WITH CHLORINATED OR HALOGENATED CLEANING SOLVENTS

INTERCAP CAPACITORS by International©

COMMERCIAL & INDUSTRIAL ALUMINUM ELECTROLYTIC CAPACITORS — AXIAL & RADIAL LEADS

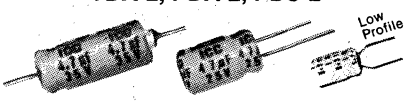
General Purpose
TDA & PDA, PDS

Temp. Range	−40°C to +85°C
Cap. Range	0.47μF−22,000μF Axial 0.47μF−10,000μF Radial
Cap. Tol.	−10% +75%, −10% +50%, ±20%
Volt. Range	6.3VDC−450VDC
Leakage (Max.)	6.3V−80V .02CxV +4μA 100V−450V .02CxV +100μA

Extended Temperature
TDB & PDB (Close Tolerance)

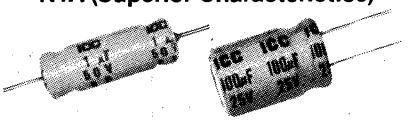
Temp. Range	−40°C to +105°C
Cap. Range	0.47μF−10,000μF
Cap. Tol.	±20%
Volt. Range	6.3VDC−250VDC
Leakage (Max.)	.01CxV +3μA
Life Test	2,000 hrs. @ 105°C

Low Leakage
TDA-L, PDA-L, PDS-L



Temp. Range	−40°C to +85°C
Cap. Range	0.1μF−2200μF
Cap. Tol.	±20%, ±10%
Volt. Range	6.3VDC−63VDC
Leakage (Max.)	0.002CxV or 0.4μA whichever is greater

Non-Polar
NTD (General Purpose)
NTA (Superior Characteristics)

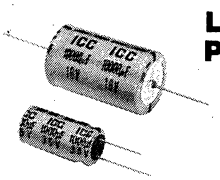


Temp. Range	−25°C to +85°C
Cap. Range	0.47μF−470μF
Cap. Tol.	−10% +50%, ±30%, ±20%, ±10%
Volt. Range	16WV−50WV
Leakage (Max.)	0.06CxV +10μA, 0.1CxV +10μA

Radial Lead — Mechanical Support Third Lead
PDA-T

Temp. Range	−40°C to +85°C	**Volt. Range**	6.3VDC−250VDC
Cap. Range	100μF−33000μF	**Leakage (Max.)**	−0.02CxV
Cap. Tol.	±20%		

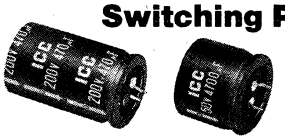
Low Impedance Radial Lead for Switching Power Supply Output & Regulator Circuits
PZL



Temp. Range	−55°C to +105°C	**Volt. Range**	7.5VDC−100VDC
Cap. Range	2.2μF−8200μF	**Leakage (Max.)**	≤40V = $0.5\sqrt{CxV}\,\mu A$
Cap. Tol.	−10% +75%		>40V = $\sqrt{CxV}\,\mu A$

Series Features Low Impedance, High E.S.R. & Ripple Current Specifications

Snap-In Capacitors — Switching Power Supply Input Circuit



PST — Standard Height
PSL — Low Profile Construction
PXT — Extra High Ripple — Standard Height
PXL — High Ripple Low Profile

Important dielectric characteristics of plastic films:

Polyester = high dielectric strength
Polycarbonate = linear temperature curve
Polypropylene = extremely low losses (tan δ)

The figures in the tables of capacitances refer to the PCM = Printed Circuit Module (lead spacing) at the lead exit points

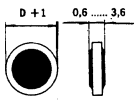
CERAMIC CAPACITORS

DISC — WAFER — TRAPEZOIDAL — TUBULAR — FEED-THROUGH

△ **Exceptionally High Quality Control on Ceramic Materials**
△ **Complete (100%) Testing**
△ **Longer Shelf Life**

DISC CAPACITORS HIGH VOLTAGE TYPES / KV1
From 1 kV to 8 kV — EIA Types (Y5P/25P) (Y5U/25U)

BUTTON DISC CAPACITORS 500V / K2P
EIA Types (Y5P/Z5P) (Y5U/Z5U)



WAFER CAPACITORS 50V / P1
Range 4700 to 4700 pF

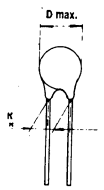
TUBULAR CAPACITORS, HIGH VOLTAGE PULSE TYPE / CIM
1.5 kV to 4 kV

TUBULAR CAPACITORS 500V / C1
0,1 pF to 30,000 pF

SAFETY TYPE DISC CAPACITORS / KZ
For AC Applications

REDUCED TITANATE DISC/KR1
.001 mFd to .18 mFd 50 V for bypass application

SUBMINIATURE DISC CAPACITORS 500V / K1



Tolerances Available: ±1% to −20 and +80%

△ Engineering Note: Type No.'s (I.E. D10) also specifies nominal diameter of the part.

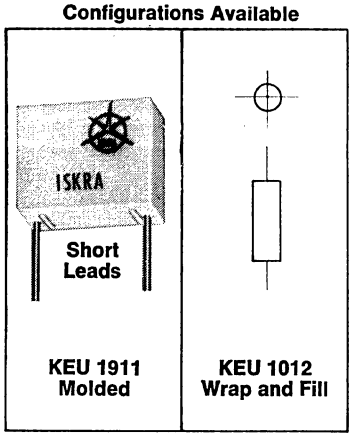
METALLIZED POLYESTER FILM CAPACITORS

Configurations Available



FEATURES

△ High insulation resistance
△ Low dielectric loss
△ Wide temperature range
△ High humidity resistance
△ Very small dimensions
△ Self-healing properties

CONSTRUCTION

△ Metallized polyester foil with excellent electrical characteristics.
△ Plastic coating permits operation under exceptionally humid climatic conditions.
△ Contact surface applied by high pressure spraying and connecting wires are soldered reducing possibility of failures or unsatisfactory contact during operation.
△ Self-healing properties guarantee greater than usual operating efficiency.
△ Flammability per UL 492.
△ Self-extinguishing plastic case and sealed with self-extinguishing epoxy resin.

TECHNICAL DATA

Temperature Range: −40°C to +85°C.
Humidity test: Per EIA specifications RS 376
Capacitance tolerance: ±5%, ±10%, ±20%.
Rated voltage Vn: 100V-, 250V-, 400V-, 630V-, 1000V-.
Allowable a.c. voltage to 60 Hz: 63V~, 160V~, 200V~, 220V~, 250V~.
Dielectric loss tg at 20°C: $\leqslant 80\times10^{-4}$ at 1 kHz
$\leqslant 200\times10^{-4}$ at 10 kHz.
Inductance: <20nH measured at terminal length of 6mm.
Test voltage (2s): 1.6×Vn.

Insulation resistance at 20°C and 100V-:

C $\leqslant$0.33μF	C >0.33μF
Vn $\leqslant$100V-	Vn $\leqslant$100V-
R = 15×10^3 MΩ	R×C = 5×10^3s
Vn >100V-	Vn >100V-
R = 30×10^3 MΩ	RR×C = 10^4s

The capacitors can be used to a temperature of 100°C, by which the working voltage at a temperature above 85°C is less than the rated voltage by 1.25% for every °C.

Miniature Axial

ORDERING INFORMATION:

SM 3.3 M 50 S

- Series Designation (SM-Subminiature Radial)
- Nominal Capacitance (Micro Farads)
- Tolerance Designation (as specified)
- Rated Voltage (DC)
- Lead Style Designation

(AX-Miniature Axial) (CE04-W-Miniature Radial)
(SSM-Super Subminiature)

NOTE: For tape and reel packaging, use a T for the lead style designation. Available for case diameters through .315 (8.00).
For epoxy end sealing, use an E next to the lead style designation. Available for case diameters through .709 (18.00)

ITT Components Subminiature Epoxy Molded Solid Tantalum Capacitors

TAR

A Unit of International Telephone and Telegraph Corporation

- Axial Leads For Automatic Insertion
- Subminiature Size For High Component Density
- Rugged Precision Molded Construction
- Polarity Positively Identified By Tapered Nose
- Extremely Low Leakage Current
- High Surge Capability
- Reliability-Long Term Stability
- Outstanding Performance Over Wide Temperature Range

Catalog Ordering Information

TAR A 1.0 M 35 — General Specifications

- 35 — Voltage
- M — Tolerance: M ±20%, K ±10%, J ±5%
- 1.0 — Capacity in µF
- A — Case Size

Standard Packaging is Tape and Reel

Case A 3000 pcs/reel
Case B 2000 pcs/reel
Case C 1000 pcs/reel

Ratings

Capacitance: 0.1 to 68 µF
Tolerance Range: ±20%, ±10%, ±5%
Voltage: 6.3 to 35 volts DC
Temperature Range: Continuous operation between −55°C to +85°C
Impedance @ 100 kHz:

Case Size	Impedance maximum
A	≤ 06.8 µF = 26 ohms ≥ 0.68 µF = 10 ohms
B, C	5 ohms

Temperature	−55°C	+85°C
% Change	−8	+12

Capacitance Change With Temperature: The change in capacitance from +25°C to a given temperature.

Standard Ratings

vacuum capacitors

ITT Jennings offers the broadest available line of high voltage capacitors for radio frequency applications. Units are available in glass and ceramic envelopes with working voltage ratings of 2 kv to 36 kv, at capacitance values to 5000 pfd, with current ranges to 420 Amps RMS (air-cooled) and 1,000 Amps RMS (water-cooled), depending upon capacity, frequency, and working voltage. The design of ITT Jennings Vacuum and Gas capacitors allows a number of electrical, mechanical and environmental advantages which include:

1) HIGH VOLTAGE—The high dielectric strength allows maximum voltage levels for a given capacitance rating.
2) HIGH CURRENT—Extremely low losses occur because of the dielectric, low loss glass and ceramic envelopes, and heavy copper construction. ITT Jennings capacitors are able to handle large currents at high RF frequencies that would destroy other types of capacitors.
3) COMPACT DESIGN—Units are quite small for their power handling capabilities.
4) HIGH Maximum to Minimum CAPACITY RATIO—Capacity change ratios are available to 140:1, making them desirable for wide tuning ranges.
5) SELF-HEALING—The design construction permits moderate overloads that would damage other materials.
6) HIGH ALTITUDE OPERATION—Vacuum capacitors are free from internal degradation due to extreme environmental conditions.

rf capacitors

ITT Jennings titanate capacitors offer the highest kVA ratings for use in applications where life and reliability are a prime requisite. A variety of dielectric materials are available to allow flexibility of design for application requirements in transmitter, radar, induction or dielectric heating, lasar, electronic welding or X-ray equipments.

A complete high power RF testing laboratory is used to verify capacitor ratings under actual operate conditions. Power testing is available to 100 KW. A MIL approved environmental test laboratory guarantees full compliance for both military or commercial requirements.

Humidity resistant coatings on external surfaces of capacitors allow operation in open air without external flashovers. ITT Jennings application engineers are available to assist the equipment design engineer in the most cost effective approach for a variety of applications.

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

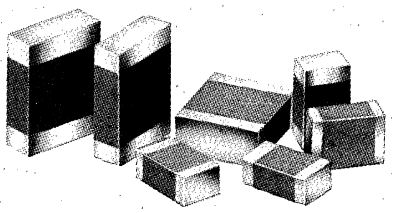
The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

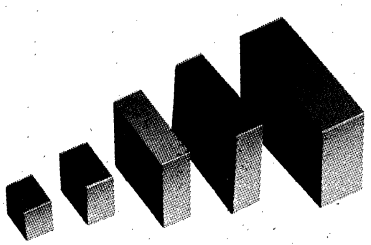
JOHANSON DIELECTRICS
Ceramic Chip Capacitors

Ultra High Capacitance Chip Capacitors



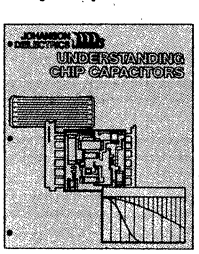
Fourteen configurations are available in four basic dielectrics: NPO/COG, BX/X7R, Z5U, and Y5V characteristics, to meet MIL-C-55681A and EIA 198B specifications. Capacitors feature high volume efficiency of capacitance, and are ideal for hybrid circuit applications.

High Voltage Chip Capacitors



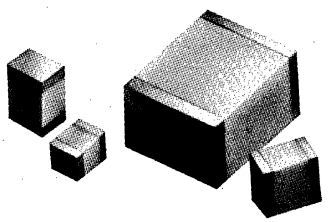
Available in either NPO/COG or BX/X7R dielectric, these units are designed to obtain high voltage values to 4000 VDCW. Typical applications include high voltage power supplies and voltage multiplier circuits.

Understanding Chip Capacitors



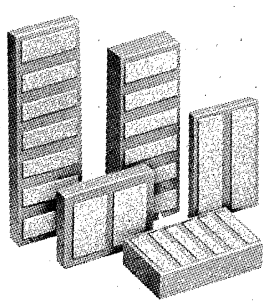
28 pages, call or write for your free copy.

High Q Microwave Chip Capacitors



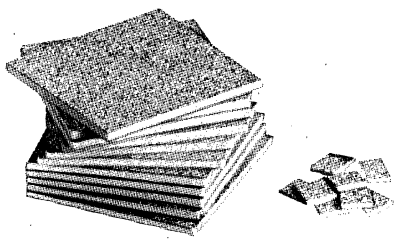
High Q microwave chip capacitors are available in four basic sizes, displaying excellent performance in the VHF, UHF and microwave ranges. The configuration, insertion loss and resonance-free performance make these chips ideal for microstrip and hybrid MIC applications.

Multiple Capacitor Arrays



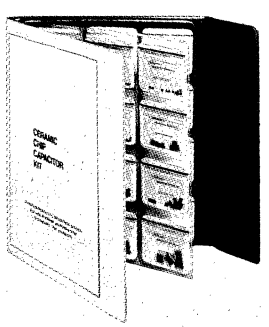
Custom designed multiple capacitor elements are ideal for multiple circuit coupling, filtering, bypass and high voltage multiplier circuits. Multiple capacitor arrays are practical replacements for individually bonded chips in hybrid circuits and are available in a variety of dielectric characteristics.

Ceramic Capacitor Wafers (Single Layer)



Ideally suited for micromodule and miniature hybrid integrated circuits where low profile requirements preclude the use of conventional multilayer chip capacitors. These units are used as bypass, shifter, blocking and filtering elements, (to 18 GHz in microwave applications). Custom configurations are also available for high voltage applications to 15 KV.

Chip Kit



Designer kits contain standard size chips in popular capacitance values and dielectric characteristics with palladium silver terminations. Kits are supplied in a special vinyl cover for convenient shelf storage with each chip value individually packaged for easy access. Available with NPO/COG dielectric No. S-900, BX/X7R and Y5V dielectric No. S-905 and ceramic capacitor wafers (single layer) No. S-910.

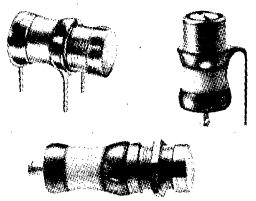
Variable Capacitors

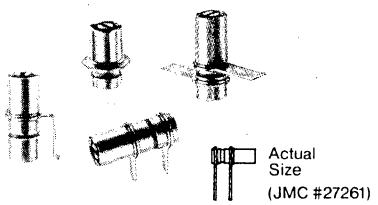
Standard Air Capacitors



- ☐ Capacitance ranges: .8-10pf to 1-30pf
- ☐ Q's to >10,000
- ☐ Excellent tuning stability and low dynamic noise
- ☐ Patented* self-locking constant torque adjustment mechanism
- ☐ Qualified to MIL-C-14409D, QPL approved
- ☐ Engineering prototype kit JK-500

*U. S. Patent No. 3,469,160

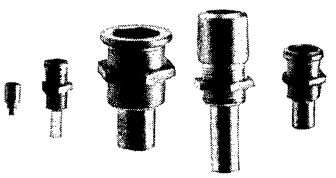
Giga-Trim® Capacitors



- ☐ Capacitance ranges: .3-1.2pf to .8-8pf
- ☐ Q's over 4000 at 250 MHz
- ☐ Ideal for microwave oscillators and filters
- ☐ Qualified to MIL-C-14409D, QPL approved
- ☐ New Zero TC versions
- ☐ Engineering prototype kit JK-272

*U. S. Patent No. 3,469,160

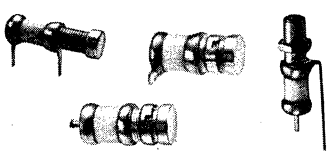
Microwave Tuning Elements



- ☐ Provide a unique money-saving means of introducing a variable reactance into waveguides, cavities, and other microwave structures
- ☐ High resolution
- ☐ Patented* self-locking constant torque adjustment mechanism

*U. S. Patent No. 3,469,160

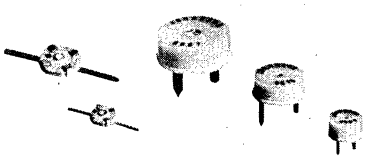
Miniature Air Capacitors



- ☐ Capacitance ranges: .35-3.5pf to .8-10pf
- ☐ Q's to >10,000
- ☐ Patented* self-locking constant torque adjustment mechanism
- ☐ Ideal for miniature microwave, VHF and UHF applications
- ☐ Engineering prototype kit JK-500

*U. S. Patent No. 3,469,160

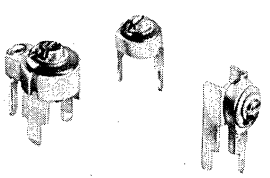
Thin-Trim®/ Seal-Trim® Ceramic Capacitors



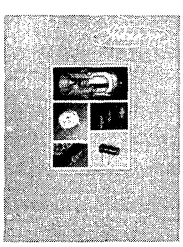
- ☐ Capacitance ranges: .2-.6pf to 20-100pf
- ☐ Q's to >3000 at 100 MHz
- ☐ Ideal for sub-miniature hybrid circuit applications
- ☐ Seal-Trims impervious to all standard PCB cleaning solvents
- ☐ Conform to MIL-C-81 requirements
- ☐ Engineering prototype kits available

U. S. Patent No. 4,179,722

Variable Ceramic Capacitors



- ☐ Low cost
- ☐ Broad tuning ranges: 1.7-6pf to 6.0-70pf
- ☐ Top, side and bottom tuning styles available
- ☐ Ideal for crystal oscillators, CATV amplifiers and all varieties of test and communication equipment
- ☐ Engineering prototype kit JK-930



Call or write for our complete catalog.

DM SERIES — Entire Range, Fully Professional.

KZ SERIES — Low Cost/Replace NPO ceramic CK-06/7.

KZDM SERIES — Low Cost DM10 and DM15 direct, plug-in replacements for high volume applications.

KSAX — Axial Mica — Available to 680pf/100V — Available tape and reel.

Taping and Reeling available on DM12 and DM15 sizes. Radial per Panasert type.

High voltage available to 2500VDC.

Tolerances ±½%, 1%, 2%, and 5% available in any value.

CAPACITANCE
Expressed in picofarads (1 microfarad = 1,000,000 picofarads). First two digits represent significant figures. Last digit specifies the number of zeros to follow.

Examples
565 — 5,600,000 = 5.60 μF
564 — 560,000 = .56 μF
563 — 56,000 = .056 μF

CAPACITANCE TOLERANCE
J — ±5%
K — ±10%
M — ±20%

FAILURE RATE LEVEL IN % PER 1000 HOURS
M — 1%
P — 0.1%
R — 0.01%
S — 0.001%

* This Military Part Numbering System is obsolete in accordance with the current specifications. The correct current designation for a CSR part number is the MIL Specification Number, followed by the Specification (slash) Sheet Number and Dash Number (i.e. — MIL-C-39003/01-2270). However, the part number breakdown shown above is still widely used and is shown for reference.

KEMET® SOLID TANTALUM CAPACITORS

UNION CARBIDE

T110 SERIES POLAR TYPE & T212 (CSR13)

KEMET standard MIL case hermetic sealed T110 Series are the leading solid tantalum capacitors in use today. They are compact, ruggedly built, designed for minaiturized circuitry, and are especially suited for coupling, by-pass, filtering and R-C timing circuits. They exhibit excellent stability, extremely low DC leakage current, dissipation factor, and impedance over a wide temperature and frequency range.

Available in standard EIA capacitance values from .0047-330 μF in ±20%, ±10%, and ±5% tolerances and working voltages from 6-125 VDC.

Higher CV values in comparable case sizes are available in KEMET T140 Series.

Included in the following T110 Series table is a complete listing of T212 Series, qualified as MIL-C-39003 CSR13 capacitors. KEMET is approved to manufacture to the S (0.001%/K hrs.) failure rate level. For additional information refer to KEMET Cat. F-1851.

KEMET® SOLID TANTALUM CAPACITORS

UNION CARBIDE

T210, T211, T220, T240 GR500 SERIES GRADED RELIABILITY

For the ultimate in high reliability and design in KEMET's GR500 Capacitors with failure rates as low as .001% per 1,000 hours. These Capacitors are manufactured to KEMET's Specification GR500 and meet or exceed all requirements of MIL-C-39003. Capacitance ranges are shown below in ordering information.

GR500 Capacitors offer a demonstrated failure rate calculated from the most sophisticated and accurate reliability measurement method in the capacitor industry. Each production lot of these capacitors is subjected to accelerated life testing on a 100% basis under low impedance circuit conditions. The subsequent accumulated data are applied to Weibull Analysis for establishing the demonstrated failure rate. These test results, including the Weibull plot and a summary of failure rate calculations, are supplied with each shipment of capacitors.

In addition, all KEMET GR500 Capaciotrs are temperature cycled 5 times from −65°C to +125°C and receive seal test, leakage current, capacitance, dissipation factor, X-Ray, and visual and mechanical inspection on a 100% basis.

For a copy of Graded Reliability Specification GR500 and additional information on these capacitors, contact your KEMET Sales Representative.

KEMET® SOLID TANTALUM CAPACITORS

UNION CARBIDE

T310 SERIES
POLAR MOLDED

Plastic molded, self-insulating, using the same State-of-the-Art process techniques employed in the production of KEMET popular T110 capacitors. Designed for lead wire pre-forming and use in automatic insertion equipment. Exhibit low leakage current, good capacitance stability and low dissipation factor characteristics. C.V. range .10 to 330 μF, 6 to 50 VDC. Will operate continuously from −55°C to +85°C at full rated voltage and with ⅔ voltage to 125°C. Solderable and weldable, high purity solder coated lead wires. Ideal for application in commercial and industrial electronic equipment. For additional information refer to KEMET T310 Series Product Catalog.

KEMET® SOLID TANTALUM CAPACITORS

UNION CARBIDE

T322 & T323 (CX01 & CX05) SERIES (MINIATURE) — EXTENDED RANGE — PRECISION MOLDED

Extended range molded solid tantalum capacitors designed specifically for high speed automatic insertion applications. These capacitors offer an extremely high capacitance to volume ratio while still maintaining excellent performance characteristics. Supplied in four axial-lead tubular case sizes, these capacitors are ideally suited for use in printed wiring boards and all applications requiring a high degree of packaging density. The low impedance at high frequencies offered by this capacitor is especially suitable for decoupling required by high speed computers. T322 Series dimensions and tight lead wire-to-body concentricity permit installation by same automatic insertion equipment used for diodes and resistors. Available in working voltages of 2 (68 μF maximum), 4, 6, 10, 15, 20, 25, 35, and 50 (4.7 μF maximum) volts. Operating temperature range −55°C to +85°C at full rated voltage and with ⅔ voltage to 125°C with no voltage derating required. For additional information refer to KEMET T322 Product Catalog Form Number F-2875. These capacitors are also available in certain values per MIL-C-49137/1 & 5.

KEMET® SOLID TANTALUM CAPACITORS

UNION CARBIDE

T330 SERIES
PRECISION MOLDED — RADIAL LEAD

KEMET T330 Series, polar-type, radial lead rectangular Precision Molded Tantalum (PMT) capacitors are primarily designed for applications that demand full use of the premium space available in printed circuitry and high density packaging. Compact, space saving T330 Series capacitors provide superior packing factor and space utilization compared with tubular units of the same microcoulomb (CV) rating.

T330 Series capacitors employ a rectangular sintered, dry tantalum anode, transfer molded in precision dies with a high impact resistant plastic having excellent electrical, physical, and moisture resistant properties. The A Case is printed with polarity marking whereas B, C, and D Cases have the polarity symbol permanently molded on top of the plastic case. The radius on the two vertical edges at the positive end of B, C, and D Cases can also be used as a sensing dimension for automatic insertion processes. The location of the standoffs may serve a similar sensing function for the A Case. These standoffs, located in the base of all case sizes, provide vents for air circulation and also allow easy removal of flux residues from leadwire and circuit board solder joints.

T330 Series capacitors are highly reliable and exhibit performance characteristics typical of military test standards. They are available in capacitance values ranging from 0.1 to 220 microfarads in ±20, ±10, and ±5% tolerance levels, and in working voltages from 6 to 50 volts. At 85°C the capacitors will operate continuously at full rated voltage. They are rated to 125°C when operated at ⅔ of nameplate voltage. In addition, they feature exceptionally low DC leakage and Dissipation Factor characteristics. These capacitors meet or exceed the environmental requirements (except hermeticity tests) of MIL-C-39003.

They are ideal for by-pass, coupling, and timing applications in computers, military ordnance, industrial, entertainment, and consumer electronic equipment.

T340 SERIES
PRECISION MOLDED — RADIAL LEAD

The compact space saving T340 Series is transfer molded in precision dies with a high impact resistant plastic having excellent electrical, physical, and moisture resistant properties.

Marking is provided on the top of the case to allow visual inspection for proper polarity and placement after insertion. In addition, positive polarity identification is achieved by an easily recognized molded radius on the positive end of the case. This physical polarity identification is readily observed after capacitor placement as a further aid to the top marking in prevention of possible reverse insertion.

Standoffs, located in the base of all case sizes, provide vents for air circulation and also allow easy removal of flux residues from leadwire and circuit board solder joints. With very low impedance and ESR values, the T340 Series features exceptionally low DC leakage and DF characteristics.

T340 Series capacitors are highly reliable and exhibit performance characteristics typical of military test standards.

KEMET® SOLID TANTALUM CAPACITORS

UNION CARBIDE

T350, T351, T352, T353, T354 & T355 SERIES

FEATURES AND APPLICATIONS

The new KEMET 'UltraDip' Capacitors offers the designer of quality instruments and entertainment systems the widely recognized advantages inherent in solid tantalum capacitors at competitive prices.

The T350, T351, T352, T353, T354 and T355 Series are miniature dipped solid tantalum capacitors which provide the designer with the advantage of compactness plus low leakage and low DF performance characteristics for filtering, bypassing, coupling, blocking and RC timing circuits. This series features a capacitance range from 0.1 to 680 microfarads at voltages from 3 to 50 VDC. 'UltraDip' capacitors utilize the same sophisticated materials and processes which have advanced Union Carbide to the leadership position in solid tantalum capacitors.

The plastic case provides a tough barrier coating and maintains precision of lead wire spacing within ±0.015 inch. The new gold color epoxy utilized permits Laser marking with outstanding permanency and legibility. These Laser marked gold color epoxy products meet all visual requirements of MIL-I-46058. All case sizes are printed with capacitance, voltage, polarity and vendor identification.

Solid tantalum devices exhibit no degradation failure mode during shelf storage and show a constantly decreasing failure rate (i.e., absence of wearout mechanism) during life tests.

The 'UltraDip' Series provides self-insulating cases which are resistant to shock and vibration. These capacitors exhibit low DCL, ESR and Impedance and have excellent temperature stability.

DIPPED — ECONOMICAL/ .1-330 μF 6-50 VDC/ LOW DC LEAKAGE

KEMET dipped solid tantalum capacitors offer the designer of quality instruments and entertainment systems the widely-recognized advantages inherent in solid tantalum capacitors at prices competitive to conventional electrolytic capacitors. Their concept is the result of the application of KEMET's superior know-how in the production of Military and High Reliability tantalum capacitors coupled with the unique automated assembly methods developed for computer-part production. These capacitors are dipped in a new gold color resin with easy-to-read laser markings.

These capacitors are also available in certain values per MIL-C-49137/2: T363 (CX02) and T369 (CX12). T369 capacitors are available in A & B cases only.

KEMET® SOLID TANTALUM CAPACITORS

UNION CARBIDE

MICRON SERIES

The KEMET Micron Series is a complete line of microminiature solid tantalum capacitors designed to provide maximum electrical performance and capacitance-to-volume ratio for microminiaturized, high density, and integrated circuits. The capacitors consist of ultra-small anode assemblies encapsulated in epoxy. The CV range is 0.0022-220 μF, 2-50 volts. Capacitance values are identified by color codes. For additional information, including non-polar styles, refer to KEMET Micron Series Product Catalog (Form F-2710).

CAPACITANCE COLOR CODING

T411, T412 (CWR01), T421 & T422 (CWR02) SERIES — TANTALUM CHIP CAPACITORS

KEMET Tantalum Chip Capacitors present, at an economical price, maximum volumetric efficiency and high temperature capability. They are manufactured using a Union Carbide developed copper coating process that permits assembly temperatures up to 300°C for a short duration and continuous operating temperatures to 175°C when derated linearly to 25% of the 85°C voltage rating. T412 (CWR01) and T422 (CWR02) per MIL-C-55365 are KEMET's military equivalent capacitors of the 411 and 421. They are specially designed for use in hybrid circuit and PC board applications using solder reflow bonding techniques. The anode connection consists of a solder coated nickel tab. Cathode connection is made to the solder coating surrounding the body of the chip. Standard capacitance values are from 0.1 to 100 μF with unlisted values available on special order. Voltage range is 4 to 50 VDC. For information on chips that are suitable for other bonding techniques (including epoxy), contact your KEMET representative.

KEMET® MULTILAYER CERAMIC CAPACITORS

UNION CARBIDE

The basic capacitor element is called a chip and consists of formulated ceramic dielectric materials in layers interspersed with metal electrode layers. The entire structure is fired together at high temperature, after which conductive terminations are applied on opposite ends to contact protruding electrode edges. Chips may be terminated with materials suitable for hybrid-circuit substrate assembly. More usually, chips are furnished with protecting encapsulation and leadwires.

KEMET multilayer ceramic capacitors are produced in a plant designed specifically for capacitor manufacture. The process features a high degree of mechanization as well as precise controls over raw materials and process conditions. Manufacturing is supplemented by extensive Technology, Engineering, and Quality Assurance programs. Extensive application in aerospace and military programs attests to the reliability of KEMET capacitors. No capacitors exceed the failure rate qualifications held by KEMET capacitors under military specifications.

KEMET ceramic capacitors are offered in the three most popular temperature characteristics. These are designated by the Electronics Industry Association (EIA) as the ultra-stable C0G (known in the vernacular as NPO), the stable X7R (military BX or BR), and the general purpose Z5U. A wide range of sizes and lead arrangements are available to provide capacitance from 1 picofarad through 6.8 microfarads in 50, 100, and 200 volt ratings.

KEMET® MULTILAYER CERAMIC CAPACITORS

UNION CARBIDE

MIGHTY MAX C630 SERIES MOLDED MULTILAYER CERAMIC CAPACITORS

Dimensional stability, electrical integrity, printed circuit board compatibility, and economical price — these are the characteristics of KEMET's C630 Series Mighty Max molded multilayer ceramic capacitors.

The Mighty Max features ease of insertion into printed circuit boards which utilize automatic insertion machines, common to the electronic packaging industry. C630's exhibit the same cross sectional dimensions and pin-to-pin registrations found in a typical 14 pin (or more) D.I.P. integrated circuit (0.300" x 0.100"). This compact design makes the Mighty Max physically compatible with standard configurations, where component height is critical. Coming to you in a single case size, the KEMET C630 Mighty Max is available in a capacitance range from 10 pF to 220,000 pF, in 50 to 100 volt ratings. Their reliable performance is assured through automated manufacture and precision process control techniques that provide uniform dielectric thickness, excellent electrode integrity, and electrode-to-termination continuity. Internal construction consists of the same superior multilayer body used in KEMET's other molded and dipped ceramic capacitor products. Encapsulation consists of a moisture and shock resistant plastic molding that exceeds flame test requirements of Underwriters Laboratory Standard 94V-O.

KEMET® MULTILAYER CERAMIC CAPACITORS

UNION CARBIDE

GR900 SERIES

CERAMIC HIGH RELIABILITY CAPACITORS

GR900 capacitors are intended for use in any application where the chance of failure must be reduced to the lowest possible level. While any well-made multilayer ceramic capacitor is an inherently reliable device, GR900 capacitors receive special attention in all phases of manufacture including raw materials selection, special designs, Class 100 Clean Room production, individual batch testing (not group sample per mil spec), ultrasonic scanning, and destructive physical analysis. These capacitors are built to the highest known standards in the industry today and exceed new EIA specification RS 469 for Destructive Physical Analyses. These parts are well worth the added investment in comparison to the cost of a device or system failure.

Typical applications include:

1. Medical: heart pacemakers, pain control devices, life signs monitoring, eye sight improvement and electroencephalographic equipment.
2. Aerospace: space exploration (Viking, Apollo, Venus Lander, etc.); Communications Satellites; Space Shuttle/IUS; Sky Lab.
3. Military: F-15 Radar, Trident Submarine, Patriot, Hawk Missile and Captor Programs.
4. Consumer: transportation failsafe (elevators and rail), airline navigation systems, smoke alarms and undersea cable amplifiers.

A data package is sent with each shipment which contains a destructive physical analysis (DPA) photograph representing each batch used in manufacture of the parts. Also, a certificate of compliance is included, stating that the parts meet all applicable requirements of the appropriate military specification to the best failure level to which KEMET is approved.

KEMET® MULTILAYER CERAMIC CAPACITORS

UNION CARBIDE

GOLDEN MAX

DIPPED CERAMIC CAPACITORS

DIPPED CASES WITH RADIAL LEADS

The KEMET "Golden Max" product line provides maximum range conformally-coated capacitors in three dielectrics — COG Ultra-Stable; X7R Stable and Z5U General Purpose. The six case sizes include over 300 CV values in a capacitance range of 1.0 pF to 3.3 μF in 50, 100, and 200 volts. Their reliable performance is built-in through automated manufacture and precision process control techniques that assure uniform dielectric thickness, excellent electrode integrity, and electrode-to-termination continuity. Internal construction consists of the same superior multilayer body used in KEMET's molded capacitors. Encapsulation consists of a multi-layer moisture and shock resistant coating that meets the flame test requirements of Underwriter's Laboratory Standard 94V-O.

This new plastic resin is gold color with easy-to-read laser markings.

Additional CV values, sizes and lead configurations are available on special order.

KEMET® MULTILAYER CERAMIC CAPACITORS

UNION CARBIDE

CHIP CAPACITORS FOR HYBRID CIRCUITS

Standard Solderguard (I & II) chips feature a unique barrier layer of copper or nickel in the end metallization that prevents silver leaching or scavenging and subsequent open circuits during assembly. The "Solderguard" chips will withstand solder reflow temperatures with little or no degradation of electrical continuity or performance. Silver palladium end termination is also available as standard. Other terminations available on special order include silver, gold and gold-palladium. KEMET chips are available in C0G, X7R and Z5U temperature characteristics in 50, 100 and 200 volt ratings.

KEMET®

FILM CAPACITORS

UNION CARBIDE

FLAT KAP FILM CAPACITORS

Flat Kaps are small ultra stable film capacitors ideally suited for filters, A/D converters, integrators, multivibrator timing capacitors, and other applications where capacitance stability is essential. This stability is obtained by locking the capacitor body in place with a solid impregnant. Outstanding electrical characteristics and volumetric efficiencies, up to 20 times greater than mica, glass, and porcelain are derived from the unique vacuum deposited dielectric, parylene.

Available in three different temperature coefficient of capacitance characteristics: −200 ±30, 0 ±50, and 0 ±100 ppm/°C over the operating range −55°C to +125°C. Capacitors are tested in accordance with MIL-C-55514 and are stocked in all standard values down to ±1% tolerance. Tighter tolerances and non-standard values are available from 0.001 μF to 1 μF on special order. For additional information refer to KEMET Film Capacitor Catalog.

F110, F120 & F130 Hermetically Sealed Radial Lead Flat Kaps also available.

FILM CAPACITORS

UNION CARBIDE

METALLIZED POLYCARBONATE FILM CAPACITORS

(MIL-C-83421/1A, MIL-C-39022/9 AND MIL-C-39022/10)

KEMET Metallized Polycarbonate Film Capacitors are designed for circuits requiring stable performance characteristics over a wide temperature range, small size, and operational reliability. They meet the same excellent quality standards associated with all other Union Carbide products. Electrical features include high insulation resistance, low dielectric absorption, low dissipation factor, and full voltage rating to 100°C. In addition, they are AC rated and have the self-healing properties that are inherent in a metallized dielectric. Typical applications include filtering, by-pass, timing, SCR commutating, and 400 cycle AC power circuits. Construction consists of high-purity metallized polycarbonate film with sprayed metal end terminations, hermetically sealed in ultra-small solder-coated tubular metal cases. The capacitance range is 0.001 to 22 μF with a DC voltage rating range of 30 to 600 volts. The 400 Hz AC voltage ratings range is 22 to 240 VRMS. The appropriate series are capable of meeting MIL-C-83421 CRH and MIL-C-39022 CHR requirements (see table below). For additional information refer to the KEMET Film Catalog Form F-2871.

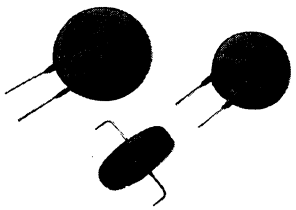
CERAMIC CAPACITORS

MAIDA DEVELOPMENT COMPANY

"DOMESTIC CAPACITOR MANUFACTURERS SINCE 1947"

HIGH VOLTAGE DISCS



Applications: Voltage multipliers, high voltage power supplies.

X5R HIGH VOLTAGE DISCS — 10, 15, 20 KV

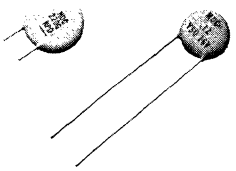
Voltage	Capacitance Range
10 KV	500pF — 2000pF
15 KV	500pF — 1500pF
20 KV	500pF — 1000pF

Applications: High voltage operation such as TV deflection circuits where corona is a problem.

ANTI-CORONA DISCS — 1 thru 6 KV

Class	T.C.	Max. Capacitance 1 KV	Max. Capacitance 6 KV
1	N750	680pF	180pF
	N1500	1100pF	300pF
	N2200	1600pF	430pF
	N3300	2700pF	750pF
2	Z5P	11000pF	3000pF
	X7R	14000pF	3900pF
	Z5U	27000pF	5100pF

500 VOLT DISCS



Applications: Hi Q capacitance stability. General purpose, by-pass, coupling, etc.

500 VOLT DISCS — CLASS 1 and 2

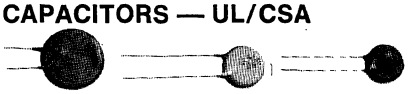
Class	T.C.	Capacitance Range
1	P100 — N5600	3pF — 5100pF
2	Z5P/X7R	470pF — 12000pF
	Z5U	1000pF — 27000pF
	Z5V	1600pF — 47000pF

Applications: High capacitance density where D.F. and T.C. are not critical.

LOW-VOLTAGE DISCS — CLASS 3 — 16, 25, 50 VOLTS

Voltage	T.C.	Capacitance Range
16VDC	Y5S	.01mF — .15mF
25VDC	Y5S	.01mF — .15mF
50VDC	Y5S	.01mF — .1mF

CAPACITORS — UL/CSA

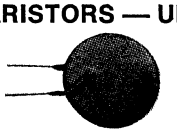


Applications: Line-by-pass, antenna coupling, across-the-line. Double protection for above.

CAPACITORS

Type	Approval	T.C.	Max. Cap.
UWAUW	UL/CSA	Z5U	10000pF
DP	UL/CSA	Z5U	5000pF

VARISTORS — UL



Applications: Across-the-line, transient overvoltage protection, energy absorption to 80 joules.

VARISTORS (UL APPROVED)

Series	Voltage VAC	Voltage VDC	VDC @ 1mA	V Clamp @ 10A
Z121	120	160	170 min.	310 max.
Z131	130	175	184 min.	330 max.
Z151	150	200	210 min.	380 max.

CLOSE TOLERANCE DISCS

Applications: ±0.5%, ±1.0%, ±2.0% tolerances.

NPO (COG) CLOSE TOLERANCE DISCS

Voltage	T.C.	Capacitance Range
500VDC	NPO	16pF — 470pF

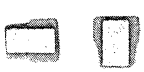
LEADLESS DISCS CLASS 1

Applications: UHF circuits with very low inductance.

LEADLESS DISCS — CLASS 1

Voltage	T.C.	Capacitance Range
500VDC	NPO-N1500	1.8pF — 39pF

500 VOLT TRAPEZOIDS



Applications: Solder into slot for minimum lead inductance.

500 VOLT TRAPEZOIDS — CLASS 1 and 2

Class	T.C.	Capacitance Range
1	P100-N1500	1.5pF — 51pF
2	Z5P-Z5U	150pF — 1000pF

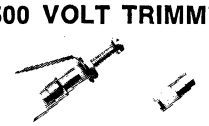
500 VOLT BUTTON FEEDTHRUS

Applications: High frequency by-pass, integral mounting surface, low inductance. Hollow pins available.

500 VOLT BUTTON FEEDTHRUS

Class	T.C.	Capacitance Range
1	S2L-S3N	3.0pF — 39pF
2	Z5P-Z5U	470pF — 1000pF

500 VOLT TRIMMER



Applications: Variable capacitive circuit elements of the screw adjustment type.

500 VOLT TRIMMERS

Material	Style	Capacitance Range
Steatite	610A	0.8pF — 4.0pF
Steatite	900A	0.5pF — 2.4pF
N220	655C	2.5pF — 9.5pF
N400	720C	3.0pF — 15.0pF

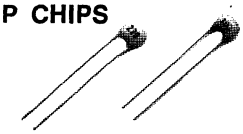
MULTILAYER CHIP CAPACITORS

Applications: Hybrid circuits.

MULTILAYER CHIP CAPACITORS — NPO, X7R, Z5U

Voltage	Max. Capacitance Value NPO	X7R	Z5U
50VDC	.012mF	.27mF	.6mF
100VDC	9100pF	.22mF	.51mF
200VDC	5600pF	.1mF	.27mF

MULTILAYER RADIAL LEAD DIP CHIPS



Applications: High volumetric efficiency in printed circuit boards.

MULTILAYER RADIAL LEAD DIP CHIPS — NPO, X7R, Z5U

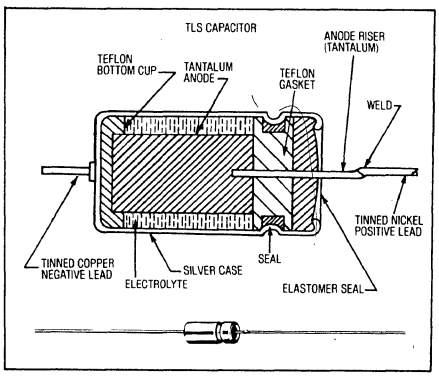
Voltage	Max. Capacitance Value NPO	X7R	Z5U
50VDC	.062mF	1.2mF	3.3mF
100VDC	.042mF	1.0mF	2.2mF
200VDC	.027mF	.56mF	1.0mF

20 SOUTH LIBBY STREET / P.O. BOX 3529 — HAMPTON, VIRGINIA 23663 / (804) 723-0785 / TELEX 82-3443

MALLORY

TANTALUM WET SLUG CAPACITORS

TLS-TLH EXTENDED CAPACITANCE MINIATURE POLAR HIGH CAPACITANCE — LOW DC LEAKAGE



STANDARD AND EXTENDED RANGE RATINGS

Mallory TLS wet slug tantalum capacitors are available in 4 miniature case sizes with high capacitance at dual voltage ratings for 85°C and 125°C operation. The TLH is a higher capacitance version of the TLS with the same high performance and reliability. TLS-TLH capacitors exhibit very low DCL, low ESR, with electrical stability over a broad temperature range from −55°C to +125°C.

The low DCL characteristic of TLS-TLH capacitors is ideally suited for critical timing circuits. The miniature size and rugged construction of the TLS-TLH is intended for applications where space is a premium and resistance to shock and vibration is a requirement.

High reliability and long life is assured by the rugged mechanical construction of the TLS-TLH. A combination elastomer-teflon seal assembly is firmly seated in a silver case by a precision groove and roll-over crimp that virtually eliminates electrolyte leakage. The tantalum anode is firmly seated in the case by teflon shock pads.

The TLS is in accord with EIA Specifications RS-228 and meets all requirements of MIL-C-3965 and can be used as a replacement for applications where Type CL64, CL65 are used.

As a cost savings Mallory offers the CTL silver-plated, copper-alloy case capacitor in the same ratings, case sizes, end seal construction as the TLS. Refer to CTL TIB 4-610A for complete details. Refer to TIB 4-604 for TLS data.

SPECIFICATIONS

- **CAPACITANCE:** To 2200 μF
- **VOLTAGE:** 6 to 125 VDC @ 85°C; 4 to 85 VDC @ 125°C
- **TOLERANCE:** ±20: ±10: ±5: on special order
- **CASE SIZES:** 4 sizes, .188″ x .453″ to .375″ x 1.062″
- **TEMPERATURE:** −55°C to 125°C

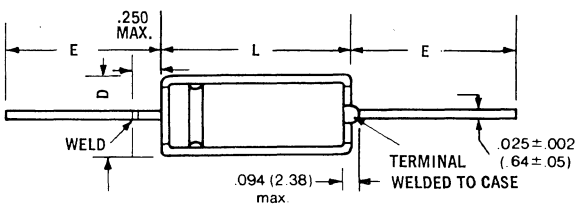
KEY FEATURES

- High capacitance per case size
- Extremely low DCL
- Long operating life
- Wide operating temperature range
- Rugged mechanical construction

APPLICATIONS

- Filter, coupling, bypass circuits
- Critical timing circuits
- Low source impedance circuits
- High charging current circuits

SIZE AND CONFIGURATIONS



CASE SIZE	UNINSULATED DIAMETER D ±.016 IN. (±.40mm)	UNINSULATED LENGTH L +.031 −.016 IN. (+.80 −.40mm)	INSULATED DIAMETER D MAXIMUM IN. (mm)	INSULATED LENGTH L MAX. IN. (mm)	E LEAD LENGTH ±.25 IN. (±6.35mm)
A	.188 (4.78)	.453 (11.51)	.219 (5.56)	.608	1.50 (38.10)
B	.281 (7.14)	.641 (16.28)	.312 (7.94)	.796	2.25 (57.15)
C	.375 (9.53)	.766 (19.46)	.406 (10.32)	.921	2.25 (57.15)
F	.375 (9.53)	1.062 (26.99)	.406 (10.32)	1.217	2.25 (57.15)

Note: The case insulation shall extend .016 inch minimum, .062 maximum beyond each end. However, when a shrink-fitted insulation is used, it shall lap over the ends of the capacitor body.

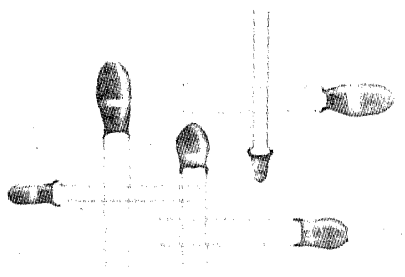
TANTALUM SOLID ELECTROLYTE CAPS

TDC TYPE — LOW COST DIPPED EPOXY



HIGH CAPACITANCE/VOLTAGE PER CASE SIZE

The TDC is a Solid Electrolyte Tantalum Capacitor which features a self insulating, hard, dip coated epoxy protective covering.

This capacitor exhibits an extremely high volumetric efficiency (CV product per unit volume) and is supplied in four (4) case sizes to cover a wide range of ratings.

TDC's are supplied with space saving, solderable, radial leads which are formed to provide a mounting standoff for easy assembly and soldering operations.

The TDC is ideally suited for commercial and industrial applications where low cost and the inherent features of a Solid Electrolyte Tantalum Capacitor are required. These features include excellent stability at high and low temperatures, low DC leakage and equivalent series resistance, wide operating temperature range, long storage and shelf life and excellent impedance verses frequency and temperature characteristics.

For additional information send for 4-810B.

SPECIFICATIONS

- **CAPACITANCE:** .10 to 330 μF
- **VOLTAGE:** 6 to 50 VDC
- **TOLERANCE:** ±20% Standard ±10% Optional
- **Temperature:** −55°C to 85°C, 125°C with voltage derating
- **CASE SIZES:** 4 sizes from .175" to .350" to .400" to .750"

KEY FEATURES

- Low cost
- Flame retardant case
- High capacitance per case size
- Long life

APPLICATIONS

- Bypass, coupling, timing
- Filtering in consumer and industrial equipment

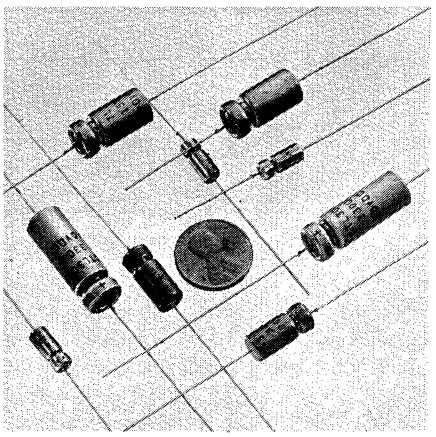
TANTALUM WET SLUG CAPACITORS

CTL TYPE — LOW COST, MINIATURE, HIGH CAPACITANCE, POLAR



LOWER COST — LOW DC LEAKAGE

STANDARD AND EXTENDED RANGE RATINGS

The CTL wet slug tantalum capacitor is now available in a new improved proprietary silver plated copper alloy case. The CTL offers at lower cost the same ratings, case sizes, and electrical performance as silver case wet slug capacitors.

The miniature size and rugged construction of the CTL is identical to the Mallory TLS wet slug capacitor. The sintered tantalum anode is firmly seated in the case on a teflon shock pad. The anode riser extends through a combination elastomer-teflon seal assembly which is seated in the case by a precision groove and roll-over crimp. The double seal construction virtually eliminates electrolyte leakage.

The CTL offers a cost savings as an exact replacement for silver case wet slug tantalum capacitors.

Refer to TIB 4-610A.

HIGHLIGHTS

- **CAPACITANCE:** To 2200 μF
- **VOLTAGE:** 6 to 125 VDC @ 85°C; 4 to 85 VDC @ 125°C
- **TOLERANCE:** ±20%, ±10%; ±5% on special order
- **CASE SIZES:** 4 sizes, .188″ x .453″ to .375″ x 1.062″
- **TEMPERATURE:** −55°C to 125°C

KEY FEATURES

- High capacitance per case size
- Extremely low DCL
- Long operating life
- Wide operating temperature range
- Rugged mechanical construction

APPLICATIONS

- Filter, coupling, bypass circuits
- Critical timing circuits
- Low source impedance circuits
- High charging current circuits

TANTALUM WET SLUG CAPACITORS

CMT TYPE — LOW COST, SUBMINIATURE

LOWER COST, SUBMINIATURE TUBULAR WET SLUG — POLAR

The CMT copper alloy case wet slug tantalum capacitor offers highest capacitance in subminiature size at lowest cost. The proprietary copper alloy case provides a significant cost savings over similar miniature capacitors in silver cases. The size and rugged construction of the CMT is intended for applications where space is a premium and resistance to shock and vibration is a requirement. The low and stable DCL characteristic of the CMT is ideally suited for application in timing circuits. Excellent high frequency performance and stable operation over a wide temperature range allow use in a variety of applications.

The rugged construction of the CMT includes mounting the tantalum anode on a shock pad positioned in a copper alloy case. A nickel lead wire is welded to the anode. The use of sulphuric acid electrolyte assures good low temperature impedance and capacitance characteristics. Special treatment of the copper alloy case prevents attack by the sulphuric acid. The capacitor is sealed by roll-crimping onto a special elastomer seal. An insulating sleeve covers the case and red epoxy encapsulant that protects the seal and encloses the positive lead wire weld. The CMT is suitable for use in automatic insertion equipment and can be furnished lead-tape and reel packaged.

For additional information send for TIB-4-609A.

HIGHLIGHTS

- **CAPACITANCE:** To 470 μF
- **VOLTAGE:** 6 to 60 VDC
- **TOLERANCE:** ±10%, ±20%
- **CASE SIZES:** 4 sizes .115″ x .300″ to .225″ x .778″
- **TEMPERATURE:** −55°C to +85°C

KEY FEATURES

- Highest CV per given volume
- Low, stable DCL
- Excellent shelf and operating life
- Rugged mechanical construction

APPLICATIONS

- Timing circuits, filter coupling, bypass circuits

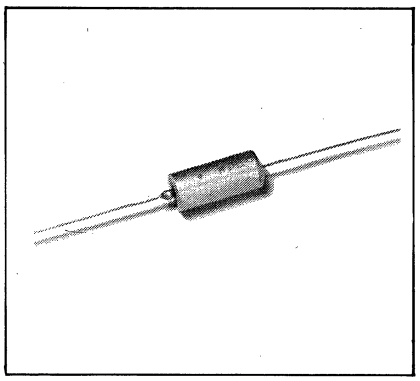
TANTALUM SOLID ELECTROLYTE CAPACITORS

THF TYPE — HIGH RIPPLE PERFORMANCE

FOR SWITCHING REGULATOR POWER SUPPLY APPLICATIONS



ONE THF CAPACITOR CAN REPLACE UP TO FOUR CSR TYPES

The THF is designed to provide stable capacitance, low impedance, and higher ripple current capability at high frequency. A patented special configuration anode offers lower ESR and impedance at frequencies above 1 kHz through 100 kHz. The lower power loss characteristics of the THF makes it suitable for output filtering in switching regulator power supplies.

The inherent electrical stability and lower power loss of the THF allows it to carry the same ripple current that would require up to four conventional solid tantalum capacitors. Savings in cost, space, and weight can be realized by use of the THF in high frequency ripple current applications.

The military version of the THF is approved to meet all the requirements of military specification MIL-C-39003/9 Style CSR21. Refer to Bulletin 4-819 for specifications and MIL part numbers. Refer to TIB 4-805B for complete details.

SPECIFICATIONS

- **Capacitance**
  5.6 to 330 μF
- **Voltage**
  6 to 50 VDC
- **Tolerance**
  Standard ±20% — ±10% optional
- **Temperature**
  −80°C to +125°C
- **Case Size**
  2 sizes, .29 x .69 & .35 x .79 inches

KEY FEATURES

- High Ripple Current
- Low ESR
- Lower Impedance at High Frequencies
- Small Size
- Extremely Stable Capacitance
- Hermetic Seal
- Long Life

APPLICATIONS

- Switching Regulators
- High Frequency Power Supplies
- By-pass Filtering

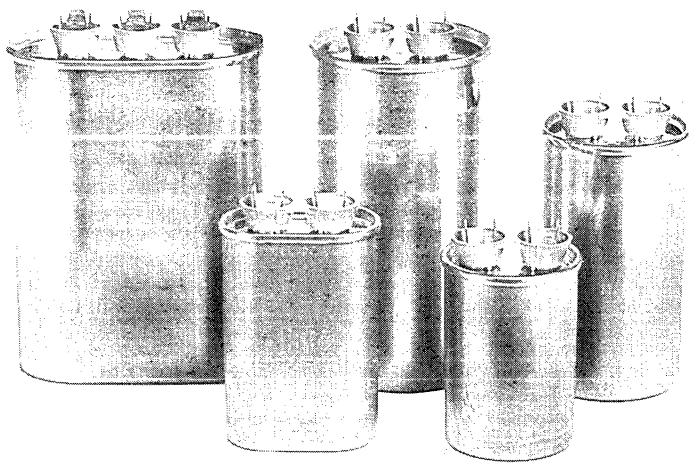
AC-METALLIZED POLYPROPYLENE FILM CAPACITORS

NON-PCB TYPE CAPACITORS



SPECIFICATIONS

- **Capacitance**
  2 to 70 μF
- **Voltage**
  180 VAC to 240 VAC-Dry
  330 VAC to 440 VAC-Oil Filled
- **Operating Frequency**
  50 to 60 Hertz
- **Capacitance Tolerance**
  ±10% Standard and ±6% Special
- **Dissipation Factor**
  0.1% Max.
- **Case Temperature**
  −40°C to +70°C (Std.)
  −40°C to +90°C (Optional)
- **Case Styles**
  Round, Flat Ovals, Rectangular
- **Case Sizes**
  Round 1¾", 2", 2½" dia.
  Flat Oval 1¼", 1½", 1¾", 2"
  industry types
  Height 2⅝" up to 5¾"

KEY FEATURES

- Internal Protector
- Environmentally Acceptable with Biodegradable Dielectric Fluid
- Wide Range of Case Styles and Sizes
- Long Life and High Reliability
- Double Rolled Seams
- Steel Cases

SUGGESTED APPLICATIONS

- Air Conditioning
- Business Machines
- Fan Motors
- Power Supplies
- Refrigeration
- Industrial Control
- Phase Shifting
- H.I.D. Lighting

NON-PCB WITH U.L. RECOGNIZED PROTECTOR

Mallory Non-PCB capacitors contain Metallized Polypropylene Dielectric and a biodegradable fluid for environmental compatibility. They also incorporate a U.L. recognized internal protective device to minimize the hazard of case rupture in the event of capacitor failure. These capacitors are useful in a variety of applications where continuous operation is required on the normal AC Power source available in home and industry.

They offer good reliability and long life and are designed to meet the intent of EIA Standard RS-456 — characteristic "E" or "F." For additional information send for Technical Information Bulletin 4-404B.

MINIGLOSSARY BASIC CAPACITOR FORMULAS

I. Capacitance (farads)

English: $C = \frac{.224\ K\ A}{t_D}$

Metric: $C = \frac{.0884\ K\ A}{t_D}$

II. Energy stored in capacitors (Joules, watt-sec)

$E = \frac{1}{2}\ CV^2$

III. Linear charge of a capacitor (Amperes)

$I = C\frac{dV}{dt}$

IV. Total Impedance of a capacitor (ohms)

$Z = \sqrt{R_s^2 + (X_C - X_L)^2}$

Where Rs = ESR

V. Capacitive Reactance (ohms)

$X_C = \frac{1}{2\pi fC}$

VI. Inductive Reactance (ohms)

$X_L = 2\pi fL$

VII. Phase Angles:

Ideal Capacitors: Current leads voltage 90°
Ideal Inductors: Current lags voltage 90°
Ideal Resistors: Current in phase with voltage

VIII. Dissipation Factor

$DF = \tan\delta\ (\text{loss angle}) = \frac{ESR}{X_c} = (2\pi fC)\ (ESR)$

IX. Power Factor

PF = Sine δ (loss angle) = Cos φ (phase angle)
PF = DF (when less than 10%)

X. Quality Factor (dimensionless)

$Q = \text{Cotan}\ \delta\ (\text{loss angle}) = \frac{1}{DF}$

XI. Equivalent Series Resistance (ohms)

$ESR = (DF)\ (Xc) = (DF)\ (\frac{1}{2}\pi fC)$

XII. Power Loss (watts)

Power loss $= (2\pi fCV^2)\ (DF)$

XIII. KVA (Kilowatts)

$KVA = 2\pi fCV^2 \times 10^{-3}$

XIV. Temperature Characteristic (ppm/°C)

$TC = \frac{Ct - C_{25}}{C_{25}\ (T_t - 25)} \times 10^6$

XV. Cap Drift (%)

$C.D. = \frac{C_1 - C_2}{C_1} \times 100$

XVI. Reliability of Ceramic Capacitors

$\frac{L_o}{L_t} = \left(\frac{V_t}{V_o}\right)^x \left(\frac{T_t}{T_o}\right)^\tau$

XVII. Capacitors in Series (current the same)

Any number: $\frac{1}{C_T} = \frac{1}{C_1} + \frac{1}{C_2} \text{---} + \frac{1}{C_N}$

Two: $C_T = \frac{C_1\ C_2}{C_1 + C_2}$

XVIII. Capacitors in Parallel (voltage the same)

$C_T = C_1 + C_2 \text{---} + C_N$

XIX. Aging Rate

A.R. = % Δ C/decade of time

XX. Decibels

$db = 20 \log \frac{V_1}{V_2}$

Metric prefixes:

Pico	$\times 10^{-12}$
Nano	$\times 10^{-9}$
Micro	$\times 10^{-6}$
Milli	$\times 10^{-3}$
Deci	$\times 10^{-1}$
Deca	$\times 10$
Kilo	$\times 10^{3}$
Mega	$\times 10^{6}$
Giga	$\times 10^{9}$
Tera	$\times 10^{12}$

Symbols:

K = Dielectric Constant
A = Area
t_D = Dielectric thickness
V = Voltage
t = time
R_S = Series Resistance
f = frequency
L = Inductance
δ = Loss angle
φ = Phase angle
x + y = Exponent effect of voltage and temp
L_o = Operating life
L_t = Test life
V_t = Test voltage
V_o = Operating voltage
T_t = Test temperature
T_o = Operating temperature

TYPE 202/203 DIPPED TANTALUM CAPACITORS

TYPE 202

Designed to take advantage of high purity tantalum powder resulting in smaller size units and minimum cost, with very low leakage current and excellent stability over both temperature and time, with a very limited distribution. Ideal for by-passing, coupling and timing applications.

SPECIFICATIONS

Capacitance Range: 0.1 to 330 μF
Rated Working Voltage: 3.15 to 35 VDC
Capacitance Tolerance: ±20%; ±10%
Operating Temperature Range: −55°C to +85°C
DC Leakage Current (Rated Voltage, 5 min., 25°C): 0.01 CV (μA or 0.5 μA)
Conform to the test method of Capacitor Flame Test in UL 1414.

ALLOWABLE REVERSE VOLTAGE

10% of rated voltage or 0.5 V, whichever is greater, at 25°C; 3% of rated voltage or 0.5 V, whichever is greater, at 85°C.

TYPE 203 Miniature Microdip

SPECIFICATIONS

Combines the efficiency and smaller size of tantalums with the best electrical parameters available.

Operating Temperature Range: −55°C to +85°C
Rated Working Voltage: 3.15, 6.3, 10, 16, 20, 25, 35 VDC
Capacitance Range: 0.01 to 10 MFD
Capacitance Tolerance: ±20% (M)
DC Leakage Current: 0.01 x CV or 0.5 μA, whichever is greater
Conform to the test method of Capacitor Flame Test in UL 1414.

LEAD MATERIAL

Solder plated, nickel-silver alloy.

MATSUO® TYPE 221 DIPPED TANTALUM CAPACITORS

SEVEN CASE SIZES; 188 STANDARD RATINGS

SPECIFICATIONS

Capacitance Range: 0.1 to 470 μF
Rated Working Voltage: 3.15, 6.3, 10, 16, 20, 25, 35 & 50 VDC
Capacitance Tolerance: ±20% (M); ±10% (K); ±5% (J)
Operating Temperature Range: −55°C to +125°C
DC Leakage Current (Rated Voltage, 5 min., 20°C): 0.01 CV (μA) or 0.5 μA, whichever is greater; special order low leakage: 0.001 CV (μA) or 0.05 μA

SURGE VOLTAGE

Maximum change in capacitance after rated surge voltage is applied in series with a 1000 ohm resistor at the rate of ½ minute on, 4½ minutes off, for 1000 successive test cycles at 85°C: within ±5% of initial value. Dissipation factor and DC leakage: within initial specifications.

DC Rated Voltage at 85°C	3.15	6.3	10	16	20	25	35	50
DC Surge Voltage at 85°C	4.0	8.0	13	20	25	32	44	63

Capacitors shall withstand the surge voltage applied in series with a 100 ohm resistor at the rate of ½ minute on, 4½ minutes off, for 1000 successive test cycles at 85°C. After test, capacitors shall meet the requirements in Table 1.

Table 1

Capacitance Change	Within 5% of initial value
Dissipation Factor	Within initial requirement specified
DC Leakage Current	Within initial requirement specified

TYPE 245

Hybrid Capacitor — Fuse

Eliminates the noise generated at rise time in ultra-high speed logical circuits such as TTL and ECL. Built-in fuse functions either as thermal fuse under small current or as electric fuse under larger currents.

SPECIFICATIONS

Operating Temperature Range: −55°C to +125°C (For temperature above 85°C, derate voltage to 67% of R.V.)
Rated Voltage: 10 VDC to 50 VDC
Capacitance Range: 1.0 to 33 MFD
Capacitance Tolerance: ±20% (M)
DC Leakage Current: 1 (Rated voltage, 5 minutes, 25°C) 0.01 CV or 0.5 μA whichever is greater.
Conforms to UL 1414.
Circuit Breaking Performance
Built-in fuse functions as a thermal fuse at current of less than 5 amperes. At current of more than 5 amperes, built-in fuse functions by the current flowing through fuse.
Available on tape in ammo-pack or reel.

- CAPACITANCE IN PICOFARADS: 104
- CAPACITANCE TOLERANCE: K

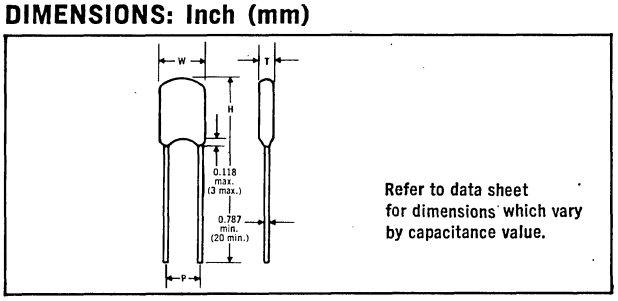
TYPE 602 POLYPROPYLENE

602 capacitors were designed for applications requiring high accuracy, excellent stability, low dielectric absorption, very high insulation resistance and low temperature coefficient. Available on tape and reel.

SPECIFICATIONS

Operating Temperature Range: −40°C to +85°C
D.C. Rated Voltage: 100 VDC
Capacitance Range: 0.001 to 0.22 MFD, E-12 series
Capacitance Tolerance: ±2% (G), ±1% (F), ±5% available on special order
Dielectric Withstanding Voltage: 2 times D.C. rated voltage for 1 minute
Insulation Resistance: 100,000 MΩ at 20°C
10,000 MΩ min. at 85°C
Dissipation Factor: <0.15 MFD 0.1% max.
≥0.15 MFD 0.2% max.
at 20°C, 1000 Hz

DIMENSIONS: Inch (mm)



ORDERING INFORMATION

602 M 1003 103 G 1

- TYPE: 602
- FAILURE RATE: M: 1%/1000 Hrs.
- RATED VOLTAGE
- CAPACITANCE IN PICOFARADS: 103
- CAPACITANCE TOLERANCE: G
- LEAD STYLE OR PACKAGING: 1: Straight, 4: Crimp, C: Tape & reel

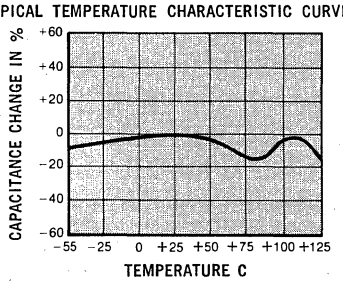
NOTE: IPPM equals 0.0001%

TYPICAL TEMPERATURE CHARACTERISTIC CURVE

X7R



HOW TO ORDER

GT07 B CG 101 J

SIZE:

WVDC: (B = 50V)[1] (D = 100V) (F = 200V)

DIELECTRIC: (CG = NPO) (BM = X7R) (BN = Z5U)

CAPACITANCE CODE:[2]

TOLERANCE:[3]

1. **WVDC AVAILABLE:** 50 VDC, 100 VDC, 200 VDC
2. 101 = 100 pF i.e., the third digit signifies number of zeroes
3. **MINIMUM AVAILABLE CAPACITANCE TOLERANCES:**
   B = ±.1 pF (10 pF and below) J = ±5% (10 pF and above)
   C = ±.25 pF (10 pF and below) K = 10% (5.6 pF and above)
   D = ±.5 pF (10 pF and below) M = 20% (2.7 pF and above)
   F = ±1% (10 pF and above) Z = +80%, −20% (all values)
   G = 2% (10 pF and above) P = +100%, −0% (GMV — all values)

NPO (COG) CHARACTERISTICS

WORKING VOLTAGE: 50/100/200 VDC
Higher voltages available on request

TEMPERATURE COEFFICIENT: 0 ±30 PPM/°C, −55°C to +125°C (EIA Characteristic COG)

DISSIPATION FACTOR: Min. Q of 1000 at 1 MHz. Meets provisions of EIA standard for capacitance less than 30 pF and greater than 1000 pF

INSULATION RESISTANCE: 100 K megohms or 1000 megohm-microfarads, whichever is less at 25°C, at rated voltage

DIELECTRIC STRENGTH: 250% rated voltage with 50 mA maximum charging current

CAPACITANCE TOLERANCES AVAILABLE: ±1%, ±2%, ±5%, ±10%, ±20%

Meets or exceeds requirements of MIL-C-20

SERIES SCI 9900/9910/9920

All units are hermetically sealed (glass to metal) on one end, while the other end is epoxy sealed. These units are also available reversed with the hermetic seal at the opposite end. To order, add "R" to the end of the part number; e.g. 9900-502R. Installation: Series 9900 units are designed to be soldered in place. Maximum soldering temperature is +200°C (400°F).

Ultra-Q Miniature Microwave Ceramic Capacitors QUALIFIED TO MIL-C-55681B

A state of the art ceramic capacitor designed for use at microwave frequencies. The superior dielectric properties of the ceramic material furnish extremely high Q and lowest loss of any type capacitor available. A minimum Q of 10,000 is guaranteed at 1 MHz. Units are available in either chip form or various leaded configurations. Typical applications include low noise FET circuits, high frequency, low noise receiver front ends and UHF microwave hybrids.

GENERAL SPECIFICATIONS

CAPACITANCE RANGE: .1 pF through 1000 pF
WORKING VOLTAGE: 50 through 500 VDC (see tables)
Q @ 1 MHz: 10,000 minimum
DISSIPATION FACTOR @ 1 MHz: less than .0001
INSULATION RESISTANCE: more than 100,000 megohms @ 25°C, 10,000 meg @ 125°C
TEMPERATURE COEFFICIENT: +90 ±20 ppm/°C
OPERATING TEMPERATURE RANGE: −55°C to +125°C
CAPACITANCE TOLERANCE: B = ±.1 pF, C = ±.25 pF, D = ±.5 pF (values <5 pF), F = ±1%, G = ±2%, J = ±5%, K = ±10% (values ≥5 pF)
CHIP TERMINATION: Palladium silver
DIELECTRIC STRENGTH: 250% of WVDC rating
CAPACITANCE DRIFT: ±.1% or .1 pF, whatever is greater

SPECIALISTS IN CERAMIC CAPACITORS

DISC CERAMIC CAPACITORS

SPECIFICATIONS

Temperature Characteristics: Available in characteristics shown in table (below-right) as standard.

Operating Temperature: −55°C to +85°C.

Test Voltage: 2.5 times working voltage for 1 second.

Insulation Resistance:
7500 Megohms or an RC product of 75-ohms F, whichever is less.
RC product of .04-ohms F for 12 VDCW Y5T.
RC product of .1-ohm F for 16 VDCW Y5T.
10,000 Megohms for NPO.

Q (Ratio of Reactance to Equivalent Series Resistance):
Capacitance ≤ 30 pf Q ≥ 400 + 20 x Cpf
Capacitance > 30 pf Q ≥ 1000

Dissipation Factor:
For Z5F, X5R, Z5U, Z5P (@ 1 KC and 25°C) 2.5%
For Z4V, Z5V 5% For Y5U 8.0%
For S2L, S3N 0.6% For NPO, N750, N1500: 0.2%

Encapsulation: Phenolic coated, wax impregnated.

Marking: MP, Value, Tolerance, Voltage.

HOW TO ORDER

Type CF-104Z4

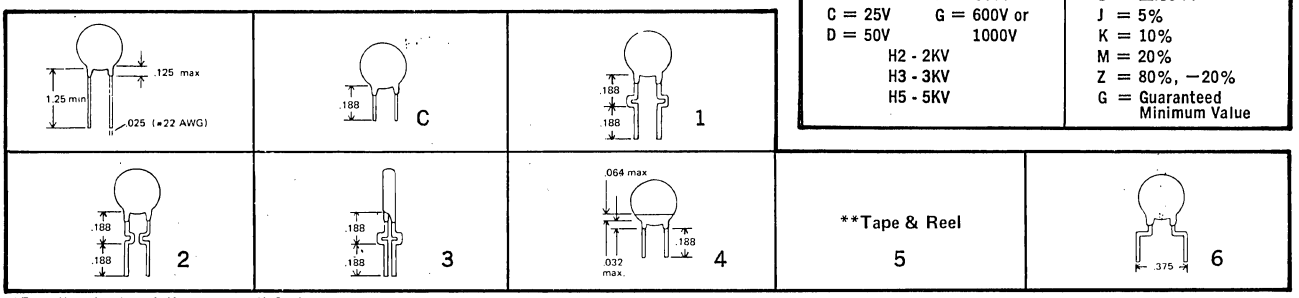
Voltage Rating
Temperature Characteristic
Capacitance
(In picofarads.) The 1st two digits indicate significant digits. The 3rd digit indicates the number of zeroes following. R denotes decimal.
Tolerance
Lead Variation

Note: The digit "4" representing lead variation may be 1, 2, 3 or 6 as shown in the diagrams below. The letter "C" and a blank space may also represent lead variations as shown in the diagrams.

TEMPERATURE CHARACTERISTIC			
A = Y5U	F = Z5V	M = P100	S = N470
B = Z5F	G = S2L	N = NPO	T = N750
C = Z5R	H = S3N	P = N150	V = N1500
D = Z5P	J = Z4V	Q = N220	W = N2200
E = Z5U	K = Z5T	R = N330	X = N3300
Other temp. char. available.			

VOLTAGE RATING (WDC)	TOLERANCE
A = 12V	C = ±.25 PF
B = 16V	D = ±.50 PF
C = 25V	J = 5%
D = 50V	K = 10%
E = 100V	M = 20%
F = 500V	Z = 80%, −20%
G = 600V or 1000V	G = Guaranteed Minimum Value
H2 - 2KV	
H3 - 3KV	
H5 - 5KV	

*LEAD VARIATIONS



*For other lead variations, consult factory.
**Disc Ceramic Capacitors can be mounted on continuous tape for automatic board insertion. These may be supplied for use in machines such as Matsushita, "Panasert", TDK "Avisert", or Universal 6341. Check the specifications of the particular capacitor(s) required by your application. To order tape and reel packaging, add numeral "5" to part number. Consult factory for details.

MULTILAYER CHIPS

SPECIFICATIONS

- **Temperaure Characteristics: NPO/COG** — 0 ±30ppm/°C, −55°C to +125°C; **BX/X7R** — △C 0 ± 15% Max. over −55°C to +125°C; **Z5U** — △C +22, −56% Max. over +10°C to +85°C
- **Capacitance: NPO/COG** — Measured at 1 Vrms Max., 1MHz ±50KHz, 25°C, below 100PF — 1 Vrms Max., 1KHz ±50Hz, 25°C, above 100PF; **BX/X7R** — Measured at 1KHz ±50Hz, 1.0 ±0.2V, 25°C; **Z5U** — Measured at 1KHz ±50Hz, 0.5V Max., 25°C
- **Dielectric Withstanding Voltage: NPO/COG, BX/X7R, Z5U** — 200% rated voltage for 5 seconds, 50mA Max. charging current, 25°C
- **Insulation Resistance: — NPO/COG** — Greater than 100 G Ω below .01 UF, 25°C, VDCW — Greater than 1000 Ω F above .01 UF, 25°C, VDCW; **BX/X7R** — Greater than 100 G Ω for capacitance below .01 UF, 25°C, VDCW; **Z5U** — Greater than 10,000M Ω for capacitance below .05 UF,25°C, VDCW — Greater than 500 Ω F for capacitance above .05 UF, 25°C, VDCW
- **Dissipation Factor (D.F.): NPO/COG** — 0.1% Max., at 1 Vrms Max., 1KHz, 25°C; **BX/X7R** — .025 (2.5%) Max. at 1KHz ±50Hz, 1.0 ±0.2V, 25°C; **Z5U** — .025 (2.5%) Max., at 1KHz ±50Hz, 0.5V Max., 25°C

ORDERING TERMINOLOGY:

MA — SERIES CODE

R30 — SIZE CODE see chart

CG — TEMPERATURE COEFFICIENT CODE
CG = NPO/COG
XR = X7R
ZU = Z5U

331 — CAPACITANCE CODE
For example:
331 = 330 PF
561 = 560 PF
102 = 1000 PF
223 = 22,000 PF = .022 UF
154 = 150,000 PF = .15 UF
8R2 = 8.2 PF
3R3 = 3.3 PF

J — TOLERANCE CODE
*B = ±0.1 PF
*C = ±0.25 PF
*D = ±0.5 PF
F = ±1%
G = ±2%
J = ±5%
K = ±10%
M = ±20%
*For Capacitance value below 10 PF only.

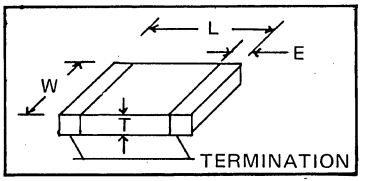
S — TERMINATION CODE
S = Silver
G = Gold
P = Palladium — Silver
T = Palladium — Gold

201 — RATED VOLTAGE
6R0 = 6 VDCW
120 = 12 VDCW
250 = 25 VDCW
500 = 50 VDCW
101 = 100 VDCW
201 = 200 VDCW

SIZE CODE

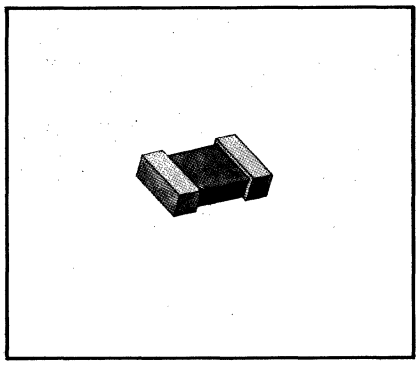
SIZE (in.)	R01	R03	R05	R07	R09	R11	R13	L01	S02	L02	L05	S04	L07
*L	.055	.080	.100	.110	.125	.130	.150	.175	.175	.180	.185	.200	.225
*W	.050	.050	.050	.105	.095	.095	.055	.065	.130	.080	.080	.260	.075
**T (max.)	.050	.050	.050	.070	.070	.070	.060	.070	.070	.060	.070	.070	.070
E	.005	.015	.020	.020	.020	.020	.020	.020	.020	.020	.020	.020	.020

*Tolerance ±0.010, ±7%, whichever is greater, +0.030-0.010 for soldered units.
**For soldered units allow +0.020.



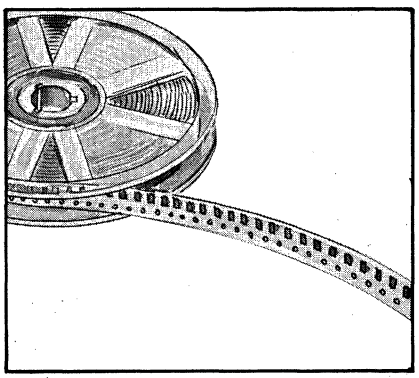
monolithic ceramic capacitors

MURATA ERIE NORTH AMERICA, INC.



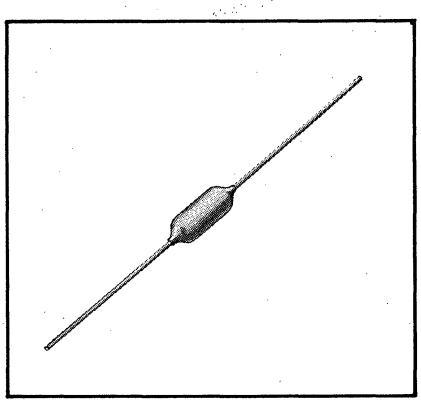
Chips

Capacitance Range:	1pF to .47mF
Voltage Ratings:	50 and 100 VDC
Temperature Characteristics:	NPO, X7F, X7R, Z5U
Dimensions:	.060″ x .030″ to .220″ x .200″



Chips for Tape and Reel

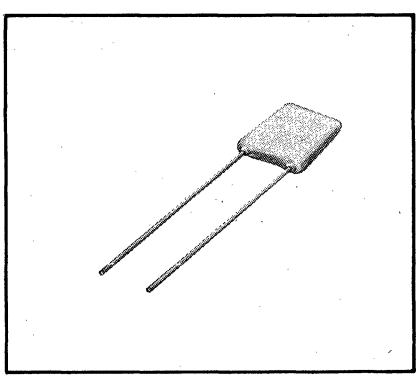
Capacitance Range:	1pF to .1mF
Voltage Ratings:	25 and 50 VDC
Temperature Characteristics:	NPO, X7R, Y5V
Dimensions:	.080″ x .050″, .125″ x .060″ and .125″ x .100″
Carrier Tape:	Standard 8MM



Axial Leaded Conformal Epoxy Coated

Capacitance Range:	1pF to 1mF
Voltage Ratings:	50 and 100 VDC
Temperature Characteristics:	NPO, X7R, Z5U
Dimensions:	.170″ x .100″ to .400″ x .150″

Available in standard packaging for auto-insertion



Radial Leaded Conformal Epoxy Coated

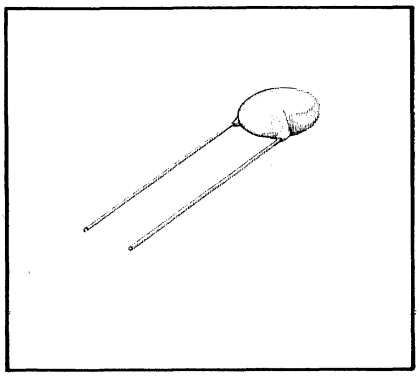
Capacitance Range:	1pF to 4.7mF
Voltage Ratings:	50 and 100 VDC
Temperature Characteristics:	NPO, X7F, X7R, Z5U
Dimensions:	.138″ x .100″ to .500″ x .500″

Available taped and reeled for auto-insertion

MURATA ERIE NORTH AMERICA, INC. 1148 Franklin Rd., S.E. Marietta, Georgia 30067 Tel: (404) 952-9777 Telex: 54-2329 TWX: 810-766-1531

disc ceramic capacitors

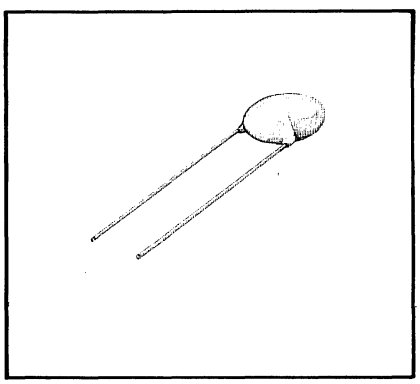
MURATA ERIE NORTH AMERICA, INC.



Low Voltage

Capacitance Range:	1pF to .5mF
Voltage Ratings:	12 VDC to 100 VDC
Temperature Characteristics:	Y5R, Y5P, Y5U, Y5V, Z5U NPO thru N750
Dimensions:	.157″ to .690″ Dia.

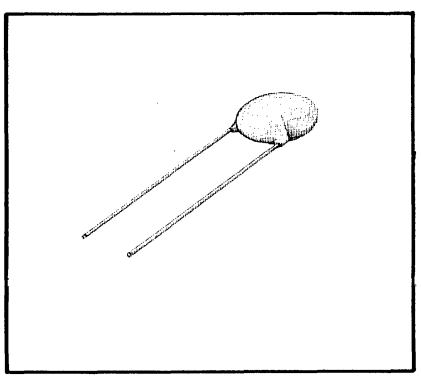
Available in standard packaging for auto-insertion



Medium Voltage

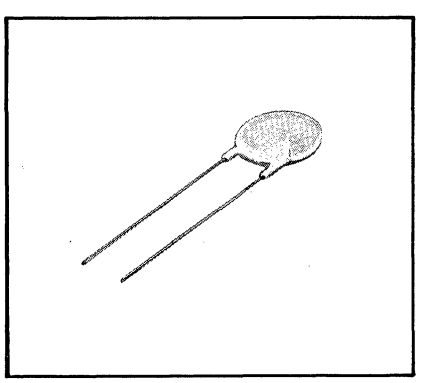
Capacitance Range:	1pF to .02mF
Voltage Ratings:	500; 1,000; 2,000; 3,000, 6,000 VDC
Temperature Characteristics:	Y5F, Y5P, Y5U, Z5U NPO, N220, N750, N1500
Dimensions:	.197″ to .708″ Dia.

Available in standard packaging for auto-insertion



High Voltage

Capacitance Range:	100pF to 2,200pF
Voltage Ratings:	7,500; 10,000; 15,000 VDC
Temperature Characteristics:	Y5P, Z5U, N4700
Dimensions:	.354″ to .788″ Dia.



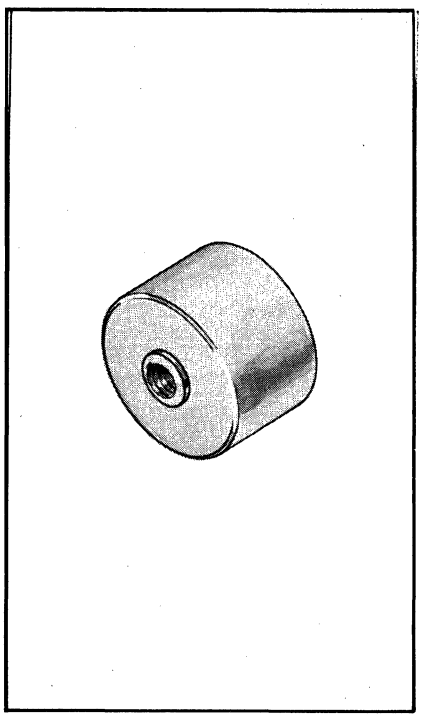
Safety Recognized UL, CSA, etc.

Capacitance Range:	100pF to .01mF
Voltage Ratings:	400 VAC
Temperature Characteristics:	B, F, FZ
Dimensions:	.394″ to .669″ Dia.
Approval Types:	UL, CSA, VDE, SEMKO, BS, SEV

MURATA ERIE NORTH AMERICA, INC. 1148 Franklin Rd., S.E. Marietta, Georgia 30067 Tel: (404) 952-9777 Telex: 54-2329 TWX: 810-766-1531

high voltage ceramic capacitors

MURATA ERIE NORTH AMERICA, INC.



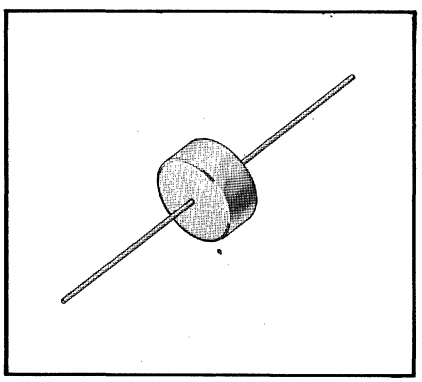
10 to 40 KVDC, DHS Series

For AC and DC Pulse Applications

Capacitance Ranges:	190pF to 8000pF
Voltage Ratings:	10, 15, 20, 30, 40 KVDC
Temperature Characteristics:	N4700
Size:	.63″ x .79″ Dia. to 1.42″ x 2.36″ Dia.

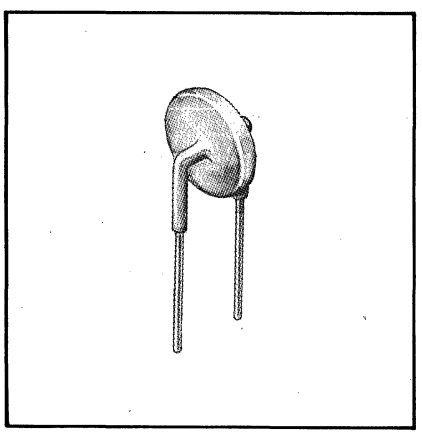
For General Purpose Applications

Capacitance Ranges:	180pF to 9300pF
Voltage Ratings:	10, 15, 20, 30, 40 KVDC
Temperature Characteristics:	Z5U
Size:	.75″ x .79″ Dia. to 1.61″ x 2.36″ Dia.



10 and 15 KVDC—DHL Series

Capacitance Ranges:	750pF and 1000pF
Voltage Ratings:	10 and 15 KVDC
Temperature Characteristics:	Y5P
Size:	.39″ x .79″ Dia. to .47″ x .79″ Dia.



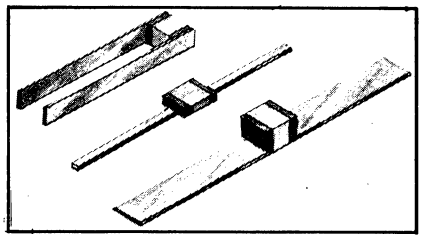
10 and 15 KVDC—DHD Series

Capacitance Ranges:	500pF and 2000pF
Voltage Ratings:	10 and 15 KVDC
Temperature Characteristics:	Y5P
Size:	.295″ x .630″ Dia. to .295″ x .945″ Dia.

MURATA ERIE NORTH AMERICA, INC. 1148 Franklin Rd., S.E. Marietta, Georgia 30067 Tel: (404) 952-9777 Telex: 54-2329 TWX: 810-766-1531

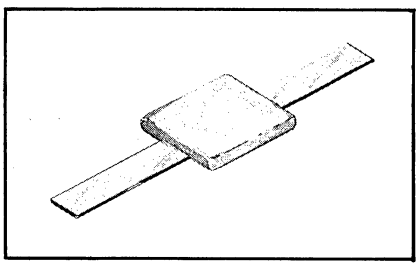
fixed and variable capacitors for microwave applications

MURATA ERIE NORTH AMERICA, INC.



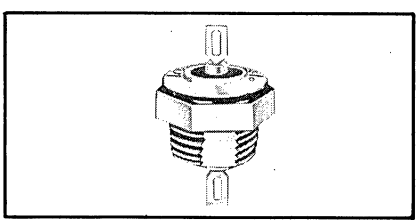
Monolithic Chips — MA Series

Capacitance Ranges:	0.3pF to 1000pF
Voltage Ratings:	50, 100, 200, 300, 500 VDC
Tolerances:	B, ±0.1pF thru M, ±20%
Q:	10,000 @ 1 MHz
Temperature Characteristics:	P90, ±20ppm/°C
Size:	.055″ x .055″ and .135″ x .110″



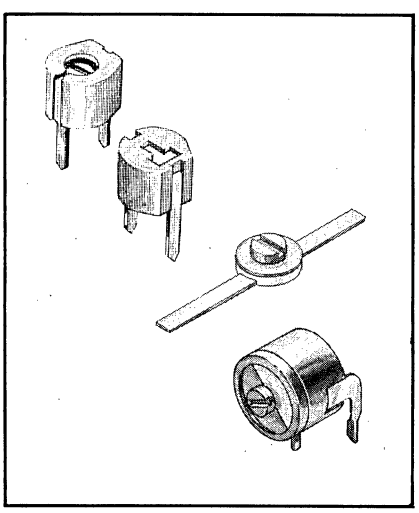
Glass Encapsulated Monolithic RF Power — UFP Series

Capacitance Ranges:	10pF to 3000pF
Voltage Ratings:	300 to 3600 VDC
Q:	5000 @ 1 MHz
RF Current Ratings:	8 Amperes
Temperature Characteristics:	P90, ±20ppm/°C
Size:	37/64″ x 35/64″ to 1 1/16″ x 1 1/16″



Button Mica

Capacitance Ranges:	15pF to 1000pF
Voltage Ratings:	500 VDC
Q:	Per MIL-C-10950
Configurations:	Stand-off and Feed-thru
Size:	.457″ Dia. x .730″ and .515″ Dia x .815″



Ceramic Trimmers

TZ03

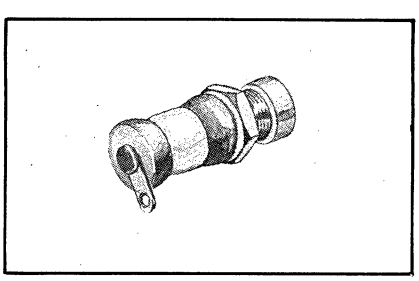
Capacitance Ranges:	1.25pF — 2.3pF to 10pF to 120pF
Voltage Ratings:	50 and 100 VDC
Temperature Characteristics:	NPO thru N1200
Size:	.236 Dia.

DVS3

Capacitance Ranges:	1.5pF — 6pF to 5pF to 35pF
Voltage Ratings:	25 VDC
Temperature Characteristics:	NPO and N750
Size:	.126″ Dia.

DV11

Capacitance Ranges:	2pF — 8pF to 15pF — 60pF
Voltage Ratings:	200 and 350 VDC
Temperature Characteristics:	NPO thru N1500
Size:	3/8″ Dia.



Air Trimmers

MVM

Capacitance Ranges:	0.8pF — 10pF to 1pF — 20pF
Voltage Ratings:	250 VDC
Temperature Characteristics:	0, ±15 and 0, ±25ppm/°C
Size:	.281″ Dia. x .484″ to .281″ Dia. x .900″

MURATA ERIE NORTH AMERICA, INC. 1148 Franklin Rd., S.E. Marietta, Georgia 30067 Tel: (404) 952-9777 Telex: 54-2329 TWX: 810-766-1531

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

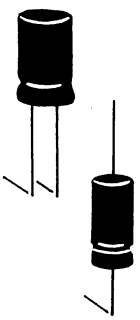
W

WPS word processing software

Y

YIG yttrium iron garnet

NIC COMPONENTS CORPORATION
CAPACITORS FOR HIGH TECHNOLOGY



ALUMINUM ELECTROLYTIC CAPACITORS
from 0.1mfd through 22,000mfd
6.3wv to 450wv

1. Axial and radial general purpose/industrial
2. Low leakage, close tolerance
3. Switching power applications
4. Lug types — high cv applications
5. Non-polarized
6. Epoxy end-seals, anti-solvent end seals
7. Extended temperature range

Radial and axial taping available for automatic insertion

EPOXY DIPPED TANTALUMS
from 0.1mfd through 330mfd
3.15wv to 50wv

CERAMIC DISC AND MONOLYTHIC (Multi-layer Types)
1pfd through 4.7 mfd

1. HI-K disc types (Y5F, Z5u etc.)
2. Temperature compensating types (NPO, N75O, NO75, N1500, etc....)
3. Semi-conductor types (Y5u, Y5T)
4. Radial epoxy-dipped multi-layer (COG/NPO, X7R, Z5u)

Taping, cut and forming available

FILM CAPACITORS
from 1pfd through 22mfd
50wv to 2000wv

1. Polyester — inductive
2. Axial and radial polyester — non- inductive
3. Metallized polyester
4. Wrap and fill
5. Polypropylene
6. Polycarbonate
7. Polystyrene

Taping and reeling, cut and formed leads available

Also ask for our resistor products

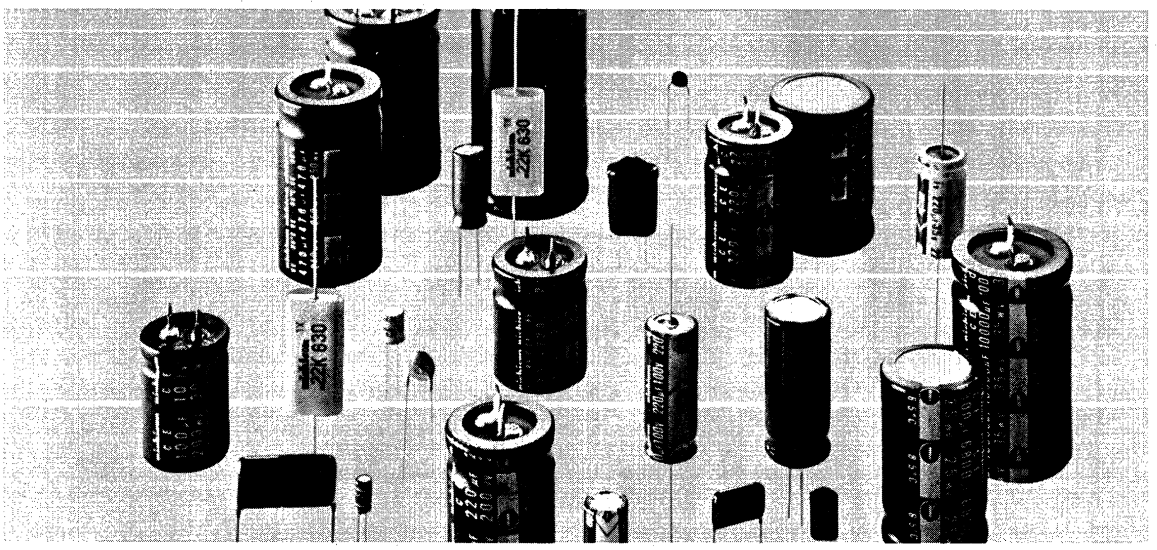
POLYESTER FILM CAPACITORS

nichicon

CAT. NAC-SF043

SHORT FORM CATALOG



At Nichicon, we're capacitor specialists. So we have to go to extremes for you. To answer your engineering questions. To help you solve design problems. To match the right capacitor to the application...at the right price, when you need them.

Nichicon is one of the world's largest manufacturers of miniature and can type aluminum electrolytic, semi-conductive ceramic disc, polyester film and metallized polyester film capacitors.

For catalogs and pricing contact your local Nichicon representative or distributor. You can also call or write Nichicon (America) Corporation, 927 E. State Parkway, Schaumburg, Illinois 60195. (312) 843-7500.

We're Nichicon. The capacitor choice.

IMPORTANT INFORMATION IN THE APPLICATION OF ALUMINUM ELECTROLYTIC CAPACITORS

1. DC electrolytic capacitors have polarity. The polarity is marked on the body of the capacitors. This type of capacitor must not be used with polarity reversed.
2. Voltage in excess of the rated voltage and/or the rated surge voltage must not be applied.
3. The capacitors should not be used at temperatures exceeding the range of the specified operating temperature.
4. In general, capacitance values decrease as the frequency increases.
5. If the capacitors are stored or left unused for more than three (3) years at normal storage temperature (−40°C ~ +40°C), aging should be conducted at the rated working voltage before application.
6. Soldering irons should not come in contact with the vinyl insulating sleeves of the capacitors.
7. Dip-soldering of the capacitors should not exceed ten (10) seconds at 260°C.
8. The capacitors may be damaged with some cleaning solvents such as Chlorothine, Triclene, Methyl Chloride, etc.

When requesting more information or data sheets, reference the series type number.

Item No.	Series Type	Rated Voltage	Capacitance (μF)	Capacitance Tolerance	Insulation Resistance	D. F.
42	AL	125 V. AC	0.0047 ~ 0.22	±10% (K), ±20% (M)	9,000 MΩ Min. at 100 V. DC 1 Min.	1.0% Max. at 1kHz

Note: The following features for ceramic disc and film capacitors are available upon your request:
1. Radial lead taping is available in 11mm diameter and less products for all ceramic series and TDY film capacitors
2. Axial lead taping is available in 11mm diameter and less products for all ceramic series
3. Lead cut and forming are available for all series

Nichicon also manufactures:
Oil filled paper capacitors (without P.C.B.'s)
Paper tublar and metallized paper tublar capacitors
Hybrid I.C.'s
PTC Thermistors "POSI-R"

SPECIAL ORDERING SPECIFICATIONS

nichicon

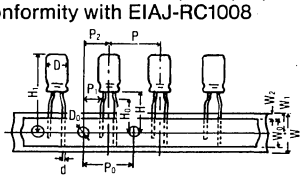
TAPED CAPACITORS FOR AUTOMATIC INSERTION

Taped Nichicon aluminum electrolytic capacitors of Axial Lead type and Radial Lead type designs are available in a choice of two packaging methods: reel packaging and ammunition box.

TAPED RADIAL LEADS

Available for capacitors with diameters of 4 (.157"); 5 (.196"); 6 (.236"); and 8mm (.314"). In conformity with EIAJ-RC1008

Units of up to φ10 (φ10x16L) can be supplied in taped form on request.



Code	D	d	P	P_0	P_1	P_2	F	H	H_0	H_1	D_0	W	W_0	W_1	W_2
Nominal Value	*	*	12.7	12.7	3.85	6.35	5.0	H+A≤H_1	16.0	MAX 32.25	4.0	18.0	MIN 12.5	9.0	MAX 3.0
Tolerance	MAX +0.5	±0.05	±1.0	±0.2	±0.7	±1.3	+0.8 −0.2	–	±0.5	–	±0.2	±0.5	–	±0.5	–

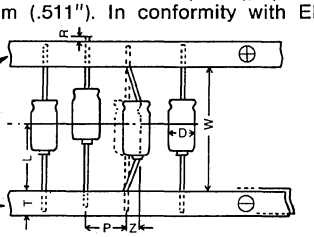
* For capacitors of φ4, units with F dimension of 3.5 are also available.
* "φd" depends on capacitor specification.

TAPED AXIAL LEADS

Available for capacitors with diameters of 5 (.196"); 6 (.236"); 8 (.314"); 10 (.394") and 13mm (.511"). In conformity with EIAJ-RC1008 and IEC-Pub 286

White tape for positive polarity

Blue or yellow tape for negative polarity



Code	W	R	P	Z	L	T
Nominal Value	52.4, 63.5, 73	2 MAX.	*	1.2 MAX.	W/2	6.0
Tolerance	±1.5	–	±0.5	–	±1.2	±1

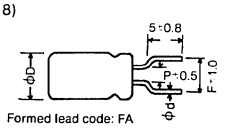
* P = 10 for φ5, 6 and 8 capacitors P = 15 for φ10 and 13 capacitors

LEAD FORMING (Capacitors with trimmed or formed leads—radial lead type)

Capacitors with their leads formed or trimmed allow for easier insertion of the units into PC boards. Thus, higher mounting efficiency can be gained.

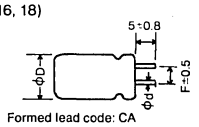
Formed leads and trimmed leads

Shape (1) (φ4, 5, 6, 8)



Formed lead code: FA

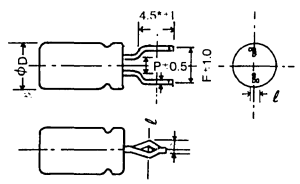
Shape (2) (φ10, 13, 16, 18)



Formed lead code: CA

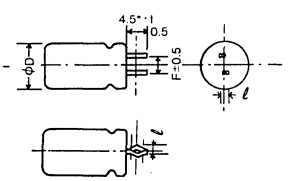
Snap-in type lead

Shape (3) (φ4, 5, 6, 8)



Formed lead code: AA

Shape (4) (φ10, 13, 16, 18)



Formed lead code: AA

Forming method Code	Shape No.	Dimensions φD	F	P	L
Forming and cutting FA	①	4	5	1.5	–
		5	5	2.0	–
		6(6.3)	5	2.5	–
		8	5	3.5	–
Cutting CA	②	10	5	–	–
		13	5	–	–
		16	7.5	–	–
		18	7.5	–	–
Snap-in type forming AA	③	4	5	1.5	1.1
		5	5	2.0	1.1
		6(6.3)	5	2.5	1.1
		8	5	3.5	1.3
	④	10	5	–	1.3
		13	5	–	1.3
		16	7.5	–	1.3
		18	7.5	–	1.3

*For φ4 capacitors with formed or trimmed leads, they can also be supplied with F dimension of 3.5 mm.
*Lead diameter φd depends on capacitor specification.

SAFETY VENT (Miniature Aluminum Electrolytic Capacitors)

Diameters ≥ 10mm	Safety Vent Standard
Diameters ≤ 8mm	Safety Vent Optional (Except SA, SL, and MA Series,)

ANTI-SOLVENT FEATURE

Clean and simple. Nichicon anti-solvent aluminum electrolytic capacitors withstand unfriendly cleaning agents for up to 5 minutes. And even though they perform better than epoxy end-sealed capacitors, their maximum seated height and cost have been reduced.

Series	Cleaning Agent	Cleaning Condition	Cleaning Time
LB† SA	Freon® TE, TES TMS	• ultrasonic (28kHz, 10 W/L Max. output) • vapor • immersion	5 minutes
SL EB VS/VH BU	I. I. I. Trichloroethane Triclene Freon® TF & TMC	• vapor • immersion	5 minutes

†LB Series capacitors with capacitance ratings ≥ 1μF, except: 100 volt "T" type axials and 100 volt/470μF radial types.

(803) 393-5421 — TWX 810-665-2182

POLYESTER FILM CAPACITORS

POLYESTER FILM CAPACITORS EXTENDED FOIL/FILM WRAP/EPOXY END FILL STYLE 107 −55°C TO +125°C

ELECTRICAL AND ENVIRONMENTAL CHARACTERISTICS

CAPACITANCE MEASUREMENTS

Capacitors of 1.0 μF or less shall be measured at a frequency of 1000 Hz. Capacitors greater than 1.0 μF shall be measured at 60 Hz. The standard capacitance tolerance is 20%. Other tolerances are available upon request.

Reference: MIL-STD-202, Method 305.

TEMPERATURE CHARACTERISTICS

The maximum change in capacitance from the measured value at +25°C shall be −6% at −55°C, and +15% at +125°C.

DISSIPATION FACTOR

When measured as specified in Paragraph 1, the dissipation factor at +25°C shall not exceed 0.6% for values up to 1.0 μF and shall not exceed 1.0% for greater capacitance values.

INSULATION RESISTANCE

When measured at +25°C, and rated voltage (or 500 VDC, whichever is less), the insulation resistance shall be a minimum of 50,000 megohm-microfarads, but need not exceed 100,000 megohms. The period of electrification shall not exceed two minutes.

Reference: MIL-STD-202, Method 302.

VOLTAGE DERATING

The capacitors may be operated at full rated voltage from −55°C to +85°C, or with linear derating to 50% of rated voltage above +85°C with a maximum temperature of +125°C.

VOLTAGE TEST

When tested at +25°C, the capacitors shall withstand the indicated DC test voltages for a period of one minute:

Terminal to terminal	200% of DC rating
Terminal to case (less than .235 diameter)	200% of DC rating
Terminal to case (greater than .235 diameter)	400% of DC rating or 2,000 VDC, whichever is less

Reference: MIL-STD-202, Method 301.

LIFE TESTING

When tested for 1000 hours at 150% of the appropriate rated voltage for the test temperature, the capacitors shall exhibit no more than one failure in twelve pieces tested. Alternatively, an accelerated +125°C test may be performed at the +85°C voltage rating for a period of 250 hours. A failure is defined as:

a) A capacitance change of more than 10% of its initial value;
b) A dissipation factor greater than that specified in Paragraph 3;
c) An insulation resistance less than ⅓ that specified in Paragraph 4; or
d) A permanent open or short.

VIBRATION

The capacitors will meet or exceed in the vibration requirements of MIL-STD-202, Method 201.

NYTRONICS CATALOG NUMBERING SYSTEM

107 B 103 M

- **107** — Nytronics Style
- **B** — D.C. Voltage Rating: B = 100V, C = 200V, E = 400V, F = 600V
- **103** — Capacitance: In μμf. The first two digits are the significant figures, the third is the number of zeros.
- **M** — Capacitance Tolerance: F = ±1%, P = ±2%, J = ±5%, K = ±10%, M = ±20%

Note: Special capacitance values, voltage ratings and sizes available to customer requirements.

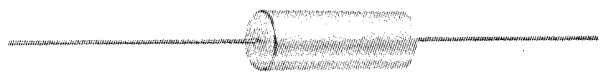
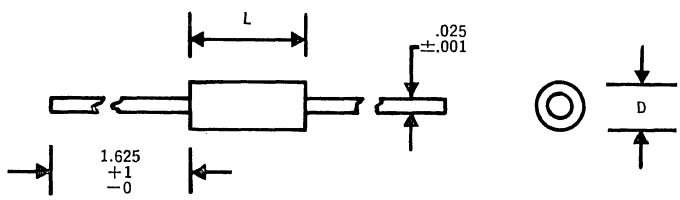
MOLDED MYLAR CAPACITORS

TYPE 111 MOLDED MYLAR* CAPACITORS

MOLDED IN RUGGED FLAME-RETARDANT MOLDING COMPOUND



Nytronics Type 111 Capacitors were developed for applications requiring excellent capacitance stability, superior humidity resistance and high insulation resistance. The capacitor element is non-inductively wound with mylar dielectric and extended foil.



Size	D, Max	L, Max

ELECTRICAL AND ENVIRONMENTAL CHARACTERISTICS

CAPACITANCE
Shall be within the specified limits when measured at a frequency of 1 KHz at +25°C.

DISSIPATION FACTOR
Shall not exceed 1% when measured as above.

INSULATION RESISTANCE
When measured at +25°C and with rated voltage applied for 2 minutes, shall be a minimum of 50,000 megohms.

DIELECTRIC STRENGTH
Shall withstand 2.5X rated voltage for one minute.

OPERATING TEMPERATURE
−55°C to +85°C at full rated voltage; derated linearly to 50% of rated voltage at 125°C.

LIFE TEST
250 hours, at +85°C and 150% of rated voltage or, at +125°C with 85°C rated voltage applied. One failure in twelve allowed.

MOISTURE RESISTANCE
Capacitors shall meet the humidity requirements of MIL-STD-202E, Method 106D, 5 cycles.

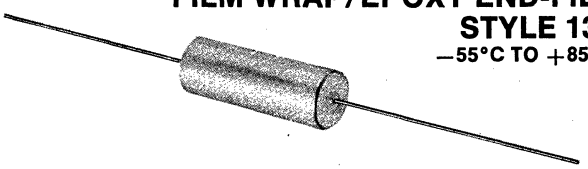
EXTENDED FOIL
FILM WRAP/EPOXY END-FILL
STYLE 133
—55°C TO +85°C



ELECTRICAL AND ENVIRONMENTAL CHARACTERISTICS

CAPACITANCE MEASUREMENTS
Capacitors of 1.0 μF or less shall be measured at a frequency of 1000 Hz.

Capacitors greater than 1.0 μF shall be measured at 60 Hz.

The standard capacitance tolerance is 20%. Other tolerances are available upon request.

Reference: MIL-STD-202, Method 305.

TEMPERATURE CHARACTERISTICS AND STABILITY
When measured over the full operating range, the Temperature Coefficient shall be −120ppm/°C ±30ppm/°C.

There shall be less than 0.1% change per year in capacitance when operated between +20°C and +50°C.

After cycling from −55°C to +75°C, the capacitance shall not vary more than 0.2% from its initial measurement at +25°C.

DISSIPATION FACTOR
When measured as specified in Paragraph 1, the dissipation factor at +25°C shall not exceed 0.1%.

INSULATION RESISTANCE
When measured at +25°C, and rated voltage (or 500 VDC, whichever is less), the insulation resistance shall be a minimum of 200,000 megohm-microfarads, but need not exceed 500,000 megohms. The period of electrification shall not exceed two minutes.

Reference: MIL-STD-202, Method 302.

VOLTAGE DERATING
The capacitors may be operated at full rated voltage from −55°C to +65°C, or with linear derating to 60% of rated voltage above +65°C to the maximum operating temperature of +85°C.

VOLTAGE TEST
When tested at +25°C, the capacitors shall withstand the indicated DC test voltages for a period of one minute:

Terminal to terminal	200% of DC rating
Terminal to case (less than .235 diameter)	200% of DC rating
Terminal to case (greater than .235 diameter)	400% of DC rating or 2.000 VDC, whichever is less

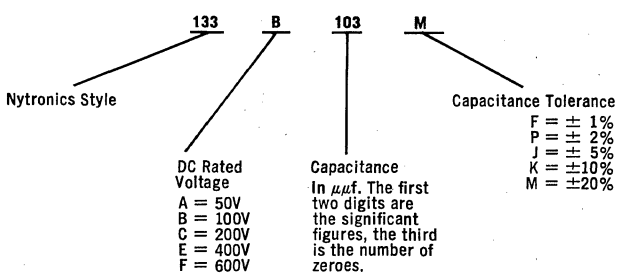
Reference: MIL-STD-202, Method 301.

LIFE TESTING
When tested at 85°C for 250 hours at full 65°C rated voltage, the capacitors shall exhibit no more than one failure in twelve pieces tested. A failure is defined as:

a) A capacitance change of more than 6% of its initial value;
b) A dissipation factor greater than that specified in Paragraph 3;
c) An insulation resistance less than 60% that specified in Paragraph 4; or
d) A permanent open or short.

VIBRATION
The capacitors will meet or exceed the vibration requirements of MIL-STD-202, Method 201.

NYTRONICS CATALOG NUMBERING SYSTEM



Note: Special capacitance values, voltage ratings and sizes available to customer requirement.

Intermediate value available.

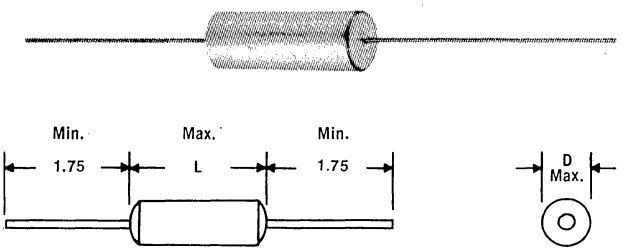
POLYPROPLYENE CAPACITORS

TYPE 187 POLYPROPYLENE CAPACITORS

EXTENDED FOIL/FILM WRAP/ EPOXY ENDFILL



ELECTRICAL SPECIFICATIONS

CAPACITANCE
Shall be within the specified limits when measured at 1 kHz at +25°C.

DISSIPATION FACTOR
Shall not exceed .1% when measured as above.

INSULATION RESISTANCE
When measured at +25°C and with rated voltage applied for 2 minutes, shall be a minimum 250,000 megohms/mfd; need not exceed 500,000 megohms.

DIELECTRIC STRENGTH
Shall withstand 200% of rated voltage for 1 minute.

OPERATING TEMPERATURE
−55°C to +105°C at full rated voltage.

LIFE TEST
250 hours, at 105°C with 140% of rated voltage applied. One failure in twelve shall be permitted.

HUMIDITY RESISTANCE
Meets the requirements of MIL-STD-202, Method 103B, Test Condition B. After test the I.R. will be equal to or greater than 1/3 of the initial requirement.

LEAD PULL & BEND TEST
Capacitors will withstand a 5 pound pull test and bend test as described in RS-164.

METALLIZED POLYPROPYLENE CAPACITOR TYPE 192

POLYESTER TAPE WRAP CASE/EPOXY ENDFILL

Type 192 Capacitors feature small size, excellent stability, high insulation resistance, low dissipation factor and good humidity resistance. These properties make them ideal for use in timing and integrating circuitry.

CAPACITANCE
Shall be within specified tolerance when measured at 1 KHz for values thru 1 MFD and at 60 Hz for values above 1 MFD.

DISSIPATION FACTOR
Less than .1% when measured as above at 25°C.

DIELECTRIC STRENGTH
1.5 X rated voltage for one minute through a limiting resistance of 100 ohms/volt.

INSULATION RESISTANCE
Minimum values.

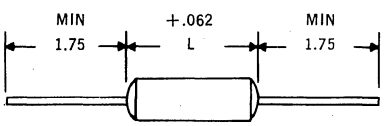
Temperature	+25°C	+85°C	+105°C
Megohms X Microfarads	100,000	5,000	500
Need Not Exceed (Megohms)	200,000	10,000	1000

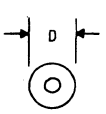
Measured After Two Minutes Electrification At Rated Voltage

TEMPERATURE RANGE
−55°C to +85°C at rated voltage to 105°C with 50% voltage derating.

HUMIDITY
Will meet the test requirements of MIL-STD-202, Method 103B, Test Condition B. After testing the I.R. will be equal to or greater than ⅓ of the initial requirements. One failure in 12 permitted.

LIFE TEST
250 hours at 85°C with 140% of rated voltage applied. A resistance of one ohm per volt shall be inserted in series with each capacitor. One failure in 12 shall be permitted.





D TOLERANCE

POLYESTER CAPACITORS

METALLIZED POLYESTER CAPACITORS TYPE 188 FILM WRAP / EPOXY END FILL −55°C TO +125°C

Type 188 Capacitors features extremely small size, light weight and self clearing metallized construction which virtually eliminates catastrophic failures. Well suited for Voltage Multiplier Circuits in TV power supplies and Electrostatic copiers. Also ideal for Potting or encapsulating in Electronic Sub assemblies, Power supplies, etc.

CAPACITANCE
Measurements shall be made at 1000 cycles per second for capacitance values thru 1. MFD and at 60 cycles per second for values over 1. MFD.

CAPACITANCE TOLERANCE
Standard capacitance tolerance is ±20% (M). Closer tolerances available upon request.

DISSIPATION FACTOR
The dissipation factor shall not exceed 1% when measured at 25°C. Measurements shall be made at 1000 Hz for capacitance values thru 1. MF and at 60 Hz for higher values.

TEST VOLTAGE
Capacitors shall withstand 200% of rated DC voltage for one minute at 25°, with the charging and discharge current limited to a maximum of 1. Ampere.

OPERATING TEMPERATURES
−55°C to +125°C.

LIFE TEST
Capacitors shall withstand a life test of 250 hours at 125°C, with 140% of the 125°C rated DC voltage applied. A resistance of one ohm per volt of applied voltage shall be inserted in series with the capacitor.

VOLTAGE DERATING
These capacitors will operate as full DC voltage ratings at 85°C. For operation at temperatures above 85°C, see Figure 4.

VIBRATION
Capacitors shall withstand a vibration test per Method 204, Test condition B of MIL-STD-202B as modified by MIL-C-27287. After test, the I.R. will be equal to or greater than ⅓ of the initial requirement.

HUMIDITY TEST
These capacitors shall meet the humidity test requirements of MIL-STD-202 Method 103B, test condition B. After testing the I.R. will be equal to or greater than ⅓ of the initial requirement.

POLYESTER CAPACITORS

METALLIZED POLYESTER CAPACITORS TYPE 189 FILM WRAP / EPOXY END FILL −55°C TO +125°C

Type 189 Capacitors features extremely small size, light weight and self clearing metallized construction which virtually eliminates catastrophic failures. Well suited for Voltage Multiplier Circuits in TV power supplies and Electrostatic copiers. Also ideal for Potting or encapsulating in Electronic Sub assemblies, Power supplies, etc.

CAPACITANCE
Measurements shall be made at 1000 cycles per second for capacitance values thru 1. MFD and at 60 cycles per second for values over 1. MFD.

CAPACITANCE TOLERANCE
Standard capacitance tolerance is ±20% (M). Closer tolerances available upon request.

DISSIPATION FACTOR
The dissipation factor shall not exceed 1% when measured at 25°C. Measurements shall be made at 1000 Hz for capacitance values thru 1. MF and at 60 Hz for higher values.

TEST VOLTAGE
Capacitors shall withstand 200% of rated DC voltage for one minute at 25°, with the charging and discharge current limited to a maximum of 1. Ampere.

OPERATING TEMPERATURES
−55°C to +125°C.

LIFE TEST
Capacitors shall withstand a life test of 250 hours at 125°C, with 140% of the 125°C rated DC voltage applied. A resistance of one ohm per volt of applied voltage shall be inserted in series with the capacitor.

VOLTAGE DERATING
These capacitors will operate as full DC voltage ratings at 85°C. For operation at temperatures above 85°C, see Figure 4.

VIBRATION
Capacitors shall withstand a vibration test per Method 204, Test condition B of MIL-STD-202B as modified by MIL-C-27287.

HUMIDITY TEST
These capacitors shall meet the humidity test requirements of MIL-STD-202 Method 103B, test condition B. After testing the I.R. will be equal to or greater than ⅓ of the initial requirement.

TUBULAR CAPACITORS

HIGH VOLTAGE TUBULAR CAPACITORS DUAL DIELECTRIC/OIL IMPREGNATED PHENOLIC CASED/EPOXY END FILL/TYPE 161

RECOMMENDED APPLICATIONS

Nytronics Type 161 Capacitors are well-suited for use in Oscilloscopes, Electronic Air Cleaners, Power Supplies of industrial devices, and related equipment. The design of these capacitors employs a Paper/Polyester Film Section, oil impregnated, incased in a phenolic tube designed specifically for high voltage application. A unique epoxy endfill process precludes oil seepage which occasionally occurs in similar designs.

TYPICAL RATINGS

CAP/MFD	3000 VDC	5000 VDC	8000 VDC	10,000 VDC
.005	½ x 1½	5/16 x 1⅞	¾ x 2	¾ x 2½
.01	5/16 x 1⅞	¾ x 1⅞	¾ x 2¼	⅞ x 2½
.05	¾ x 2 1/16	1 x 2½	1 x 4¼	1½ x 3⅛

NOTE: Other Ratings can be designed to your specifications.

OPERATING TEMPERATURE

−55°C to +85°C at full rated voltage.

DISSIPATION FACTOR

Will not exceed 1% at 25°C.

MEASUREMENTS

Capacitance up to 1 microfarad are measured at a frequency of 1000 cycles per second and capacitances over 1 microfarad at 60 cps.

DIELECTRIC STRENGTH TEST

Units will withstand a potential of 150% of rated voltage applied for one minute at 25°C.

STANDARD TOLERANCE

±20%. Other tolerances available on request.

STANDARD MARKING

Nytronics, Part No., Capacitance, Voltage, and Date Code.

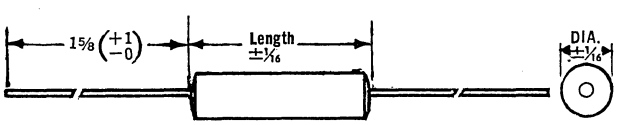
INSULATION RESISTANCE

When measured at the applicable test temperature with an electrification time of two minutes at 500 volts shall be equal to or greater than the values listed below:

Test Temperature	25°C	85°C
Megohms X Microfarads	2000	10
except that the insulation resistance in megohms need not exceed	25000	250

MOISTURE RESISTANCE

These capacitors will meet the moisture resistance requirements of EIA Specification RS-164, which requires units to withstand a 95% Relative Humidity at 40°C, except time of exposure may be increased to 500 hours. After exposure and subsequent drying periods, the insulation resistance will not be less than ⅓ of the initial requirement.



Tinned Copperweld Leads #20 AWG (.032) for sizes to 5/8" Dia.
#18 AWG (.040) for sizes 5/8" Dia. and over.

POLYSTYRENE FILM CAPACITORS

POLYSTYRENE FILM CAPACITORS HERMETICALLY SEALED TYPE 231 −65°C to +85°C

ELECTRICAL AND ENVIRONMENTAL CHARACTERISTICS

1. CAPACITANCE MEASUREMENTS

Capacitors of 1.0 μF or less shall be measured at a frequency of 1000 Hz. Capacitors greater than 1.0 μF measured at 60 Hz.
Tolerances of ±20%, ±10%, ±5%, ±2%, ±1% are standard. Tolerances closer than ±1% are available upon request.
Reference: MIL-STD-202, Method 305.

2. TEMPERATURE/CHARACTERISTICS AND STABILITY

When measured over the full operating range, the Temperature Coefficient shall be −120 ppm/°C ±30 ppm/°C.
There shall be less than 0.1% change per year in capacitance when operated between +20°C and +50°C.
When cycled from −55°C to +75°C, the capacitance shall not vary more than 0.2% from its initial measurement.

3. DISSIPATION FACTOR

When measured as specified in Paragraph 1, the dissipation factor at +25°C shall not exceed 0.1%.

4. INSULATION RESISTANCE

When measured at +25°C, and rated voltage (or 500 VDC, whichever is less), the insulation resistance shall be a minimum of 200,000 megohm-microfarads, but need not exceed 500,000 megohms. The period of electrification shall not exceed two minutes.
Reference: MIL-STD-202, Method 302.

5. VOLTAGE DERATING

The capacitors may be operated at full rated voltage from −55°C to +85°C.

6. VOLTAGE TEST

When tested at +25°C, the capacitors shall withstand the indicated DC test voltages for a period of one minute:

Terminal to terminal	200% of DC rating
Terminal to case	200% of DC rating

Reference: MIL-STD-202, Method 301.

7. LIFE TESTING

When tested at 85°C for 250 hours at 140% of the rated voltage, the capacitors shall exhibit no more than one failure in twelve pieces tested. A failure is defined as:
a) A capacitance change of more than 6% of its initial value;
b) A dissipation factor greater than that specified in Paragraph 3;
c) An insulation resistance less than 60% that specified in Paragraph 4; or
d) A permanent open or short.

8. VIBRATION

The capacitors will meet or exceed the vibration requirements of MIL-STD-202, METHOD 201.

NYTRONICS CATALOG NUMBERING SYSTEM

NOTE: The capacitors listed in this table have a capacitance tolerance of ±10%.
* For case grounded reduce L dimension by 1/16". Above listing are ratings listed in Mil-C-25C. Other values are available in Nytronics Commercial Equivalents.
** For CP05 and CP09 add .0625 to Diameter and 1/16" to Length.

MIL TYPE CP53, CP54, CP55 MIL-C-25

CAPACITORS MIL TYPE CP53, CP54, CP55

Section assembled in hermetically sealed tin-coated drawn-shell container. Mineral-oil impregnated and filled. Lug-type terminal seals. Meets requirements of MIL-C-25.

Temperature Rating: −55°C to +85°C.

Standard Tolerance: −10% to +20%.

NOTE: AVAILABLE WITH SPADE-LUG OR FOOTED BRACKET

Take a close look at PPD film capacitors... the best quality, most economical film capacitors you can buy.

Flame retardant polypropylene and polyester, film foil and metallized film capacitors.

PPD manufactures a complete line of polypropylene and polyester, film foil and metallized film capacitors.

- Coatings are flame retardant conforming to UL 94 V-O
- Laser markings available
- Tolerances to ±1%
- Markings and coatings impervious to industry-standard cleaning procedures
- Axial and radial capacitors available on tape and reel for automatic insertion

Our low-cost, ultra-miniature conformal coated axials are ideally suited for high-density applications. Radial-lead box configurations are available down to 5mm (.2") lead spacing.

Made in the U.S.A.

PPD's state-of-the-art automated manufacturing and testing assures you of consistent quality every time. And quality is just one thing we don't charge extra for.

Look at our quality for yourself. Just write us on your company letterhead, and we'll send you a sample of our product.

MINIGLOSSARY BASIC CAPACITOR FORMULAS

I. Capacitance (farads)

English: $C = \frac{.224\ K\ A}{t_D}$

Metric: $C = \frac{.0884\ K\ A}{t_D}$

II. Energy stored in capacitors (Joules, watt-sec)

$E = \frac{1}{2}\ CV^2$

III. Linear charge of a capacitor (Amperes)

$I = C\frac{dV}{dt}$

IV. Total Impedance of a capacitor (ohms)

$Z = \sqrt{R_s^2 + (X_C - X_L)^2}$

Where Rs = ESR

V. Capacitive Reactance (ohms)

$X_C = \frac{1}{2\pi fC}$

VI. Inductive Reactance (ohms)

$X_L = 2\pi fL$

VII. Phase Angles:

Ideal Capacitors: Current leads voltage 90°
Ideal Inductors: Current lags voltage 90°
Ideal Resistors: Current in phase with voltage

VIII. Dissipation Factor

$DF = \tan\delta\ (\text{loss angle}) = \frac{ESR}{X_c} = (2\pi fC)\ (ESR)$

IX. Power Factor

PF = Sine δ (loss angle) = Cos ϕ (phase angle)
PF = DF (when less than 10%)

X. Quality Factor (dimensionless)

$Q = \text{Cotan}\ \delta\ (\text{loss angle}) = \frac{1}{DF}$

XI. Equivalent Series Resistance (ohms)

$ESR = (DF)\ (Xc) = (DF)\ (\frac{1}{2}\pi fC)$

XII. Power Loss (watts)

Power loss = $(2\pi fCV^2)\ (DF)$

XIII. KVA (Kilowatts)

$KVA = 2\pi fCV^2 \times 10^{-3}$

XIV. Temperature Characteristic (ppm/°C)

$TC = \frac{Ct - C_{25}}{C_{25}\ (T_t - 25)} \times 10^6$

XV. Cap Drift (%)

$C.D. = \frac{C_1 - C_2}{C_1} \times 100$

XVI. Reliability of Ceramic Capacitors

$\frac{L_O}{L_t} = \left(\frac{V_t}{V_O}\right)^x \left(\frac{T_t}{T_O}\right)^\tau$

XVII. Capacitors in Series (current the same)

Any number: $\frac{1}{C_T} = \frac{1}{C_1} + \frac{1}{C_2} \cdots + \frac{1}{C_N}$

Two: $C_T = \frac{C_1 C_2}{C_1 + C_2}$

XVIII. Capacitors in Parallel (voltage the same)

$C_T = C_1 + C_2 \cdots + C_N$

XIX. Aging Rate

A.R. = % Δ C/decade of time

XX. Decibels

$db = 20 \log \frac{V_1}{V_2}$

Metric prefixes:

Pico	X 10^{-12}
Nano	X 10^{-9}
Micro	X 10^{-6}
Milli	X 10^{-3}
Deci	X 10^{-1}
Deca	X 10
Kilo	X 10^3
Mega	X 10^6
Giga	X 10^9
Tera	X 10^{12}

Symbols:

K = Dielectric Constant
A = Area
t_D = Dielectric thickness
V = Voltage
t = time
R_s = Series Resistance
f = frequency
L = Inductance
δ = Loss angle
ϕ = Phase angle
x + y = Exponent effect of voltage and temp
L_O = Operating life
L_t = Test life
V_t = Test voltage
V_O = Operating voltage
T_t = Test temperature
T_O = Operating temperature

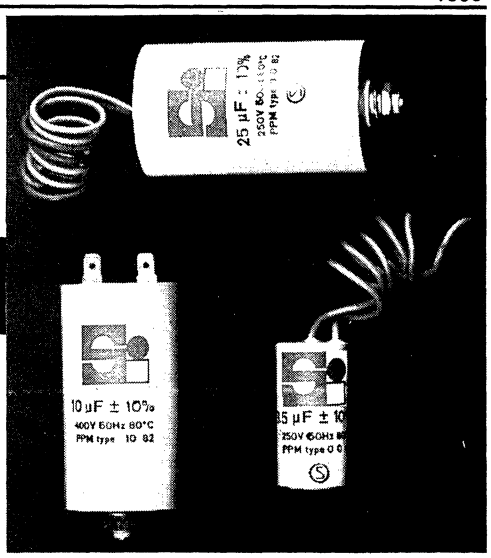
FILM CAPACITORS



MOTOR RUN CAPACITORS

NEW from SEACOR

Seacor announces a new series of miniature, self-healing, dry, metallized polypropylene capacitors for motor run or other AC or DC applications. The PNP capacitor series is encapsulated in flame retardant epoxy filled plastic cases. The polypropylene design features excellent electrical life expectancy, normally 40,000 hours and 500 hours during accelerated testing at 125% of rated voltage at 80°C. End terminations are available as insulated leads or AMP push on terminals. The capacitance variation over temperature is uniquely low, less than 3% from −25°C to 80°C.

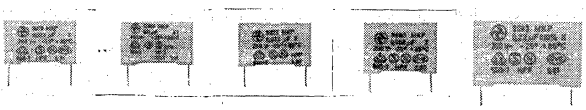
APPROVALS:

- VDE (Germany)
- SEMKO (Sweden)
- SEV (Switzerland)
- NEMKO (Norway)
- DEMKO (Denmark)

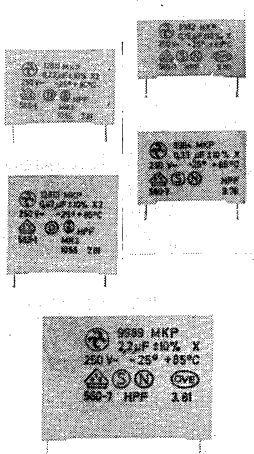
Electrical Characteristics Include:

- Capacitance Valves: 1 MFD to 65 MFD
- Tolerances: 10%, 5%
- Working Voltages: AC 115, 250, 400, 450 @ 60 Hz.
- Dissipation Factor: .1% Max
- Insulation Resistance: 10,000 Megohms X MFD
- Operating Temperature: −50°C to +90°C

SUPPRESSOR CAPACITORS



This two pole noise suppressor and X capacitor series is constructed of metallized polypropylene foil. The outer case is of flame retardant plastic with moisture proof epoxy and seals. This molded case allows for uniformity and space savings. Noise suppressor capacitors have been developed for the interference elimination of any tool, machinery, and minor equipment supplied by 2-phase a.c. mains. Electrical Characteristics include:



- Capacitance Values: .015 MFD to 2.2 MFD
- Tolerances: 20% ≤ .1 MFD, 10% > .1 MFD
- Working Voltage: 250 Vac
- Dissipation Factor: .05% @ 1 KHz @ 20°C
- Insulation Resistance: 100,000 Megohms ≤ .33 MFD 33,000 SEC > .33 MFD
- Operating Temperature Range: −25°C to +85°C

APPROVALS:

- VDE (Germany)
- SEMKO (Sweden)
- SEV (Switzerland)
- IEC (European)

The NEW SEACOR SPECIAL PRODUCTS DIVISION

SPECIAL PRODUCTS

If you can't meet your much needed requirements in a standard capacitor, contact Seacor's Special Products Division, Non-standard capacitances, tolerances, and voltages, are just a few of our capabilities. Special lead configurations, sub-miniature sizes, special designs, as well as unique marking requirements are also features of our newly developed department. Our capabilities also include special capacitance sorting and matching abilities and MANY, MANY OTHERS. A good place to start or before giving up, check Seacor's Special Products Division!

The trimmer capacitors you can count on come in more varieties than you can count

When your application calls for high-quality trimmer capacitors, you can count on Sprague-Goodman for exactly what you need.

That's because we offer the world's largest selection of dielectrics models and styles: sub-miniature glass and sapphire Pistoncaps®, plastic Filmtrims® or ceramic single turn, Mica compression, Airtrim® air-dielectric, and multi-turn plastic.

So the next time standard or custom trimmer capacitors are called for, call for the name you can count on. Sprague-Goodman.

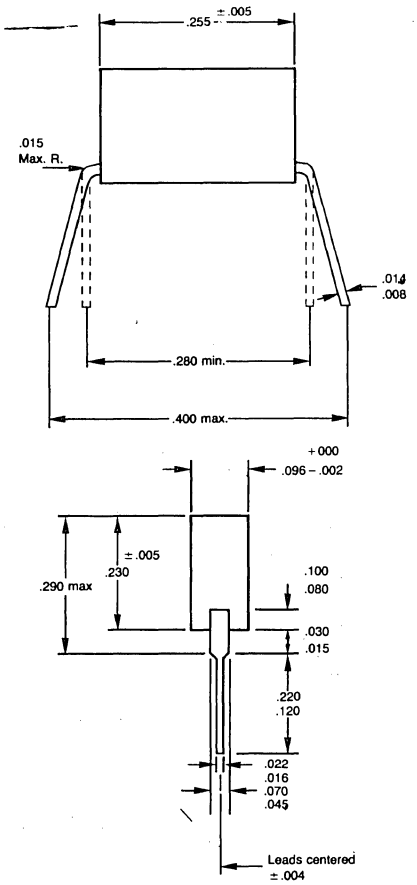
Metallized Polyester DIP

Type TRW-81

- **High IR**
- **Low DF**
- **Self-Healing**
- **Low ESR**
- **Flame Retardant Molded Epoxy Case**
- **2-pin DIP Leads**



The TRW-80 series embodies the latest in thin gauge technology. The use of ultra-thin gauge metallized polyester packaged in a small molded case with short 2 pin-dip leads provides near-ideal performance. The reliability of self-healing gives long catastrophic failure-free operation while the small package affords the low-inductance and low ESR so vital in future designs. The consistant size, low weight, precise lead placement and radial lead packaging make the TRW-80 series ideal for low cost high speed manufacturing.

SPECIFICATIONS

Insulation Resistance: Measured after 60 seconds at 25°C and rated voltage. See Table below.

Dissipation Factor: Shall be less than 1.0% when measured at 1000 ±20 Hz and at 25°C for values up to and including .12 MFD.

Dielectric Strength: Shall withstand a test of 1.6 times rated voltage for two seconds at 25°C without catastrophic failure.

Capacitance: Shall be within specified tolerance when measured at 1000 ±20 Hz at 25°C for values up to and including .12 MFD.

Equivalent Series Resistance (ESR): Less than the value shown in ESR graph when measured at 100 KHz using a Clark Hess Model 273A ESR bridge or equivalent.

Noise Factor: The pulsed ESR shall be measured with a pulse having a rise time of 5 nanoseconds to a steady state current of 100 milliamps. Typical values are shown in ESR graph. The measurement is taken after the inductive spike.

Construction: Non inductive metallized polyester winding.

Encasement: Red molded epoxy.

Lead Material: .010 Copper-Olin C194, ¾ to full hard with 50/150 microinches 60/40 of tin. 2 pin DIP configuration.

Standard Capacitance Values 50 VDC

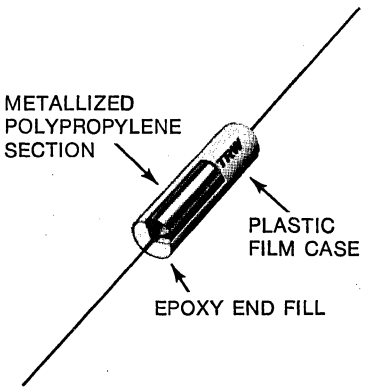
Metallized Polypropylene Dielectric

Type X363UW

Subminiature... Instrument Grade

- **Long stable life**
- **Very high insulation resistance**
- **Lowest dissipation factor**
- **Humidity resistant**
- **Saves on size and weight**
- **Capacitance tolerance to 1%**

CUT-AWAY SHOWS CONSTRUCTION



Used for a number of years in the non-precision power capacitor field, polypropylene has now been developed by TRW Capacitors as a dielectric for miniaturized precision capacitors exhibiting unique and outstanding electrical and environmental characteristics. Particularly worthy of note is its stability. The X363UW exhibits negligible shift in capacitance under long term exposure to humidity, operating life, and temperature cycling. Insulation resistance, dielectric absorption and dissipation factor properties are all the equivalent of or superior to those of polystyrene.

SPECIFICATIONS

Insulation Resistance: Minimum values.

Temperature	+25°C	+85°C	+105°C
Megohms X Microfarads	300,000	30,000	3,000
Need Not Exceed (Megohms)	500,000	50,000	5,000

Measured after two minutes electrification at 200 volts.

Capacitance Range: 0.010 thru 15.0 mfd.

Voltage Range: 100, 200, 400 VDC.

Dielectric Strength: Twice rated voltage for one minute through a limiting resistance of 100 ohms/volt.

Dissipation Factor: Less than 0.1% at 25°C when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 10.0 mfd.

Dielectric Absorption: When tested per MIL-C-19978 the dielectric absorption shall not exceed 0.05%. Shorter test methods produce lower results. For further information, consult TRW Engineering.

Capacitance: Shall be within specified tolerance when measured at or referred to 1000 ±20 Hz for values up to and including 15.0 mfd at 25° ±5°C.

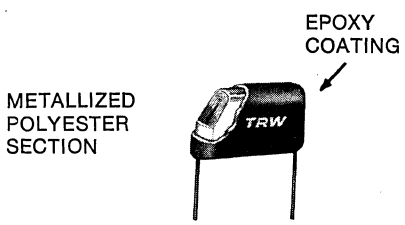
Temperature Range: −55°C to +105°C with no voltage derating.

Metallized Polyester

Type X601PE-X601CPE

Dipped Epoxy Coating

- **Ultra miniature, lightweight**
- **Tough, Rugged Case**
- **Styled for maximum packaging efficiency**
- **Capacitance values to 10 mfd**
- **Tolerances to ±5%**



CUT-AWAY SHOWS CONSTRUCTION

The X601PE was designed for quality capacitor applications utilizing the advance technology of TRW. It is ideally designed for "Space Age" applications requiring the best the industry has to offer in minimum size and weight, consistent with maximum reliability. The X601PE line is now available in a full range of value from 0.01 to 10.0 mfd in 100 and 200 VDC. The unit is excellent in electrical and environmental performance throughout this range.

SPECIFICATIONS

Insulation Resistance: Table 1, minimum values.

Temperature	+25°C	+85°C	+125°C
Megohms X Microfarads	20,000	2,000	20
Need Not Exceed (Megohms)	30,000	5,000	50

Measured after 2 minutes electrification at rated voltage

Dissipation Factor: Less than 1.0% when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 1.0 mfd at 25°C ±5°C. Capacitance values greater than 1.0 mfd measured at 60 ±6 Hz.

Dielectric Strength: Twice rated voltage for 1 minute through 100 ohms per volt limiting resistance.

Humidity Resistance: Tested as outlined in MIL-STD-202, Method 103, Condition B, no voltage applied. After final conditioning, IR no less than ⅓ minimum values listed in Table 1.

Life Test: 500 hours at +100°C and 125% of rated volts.

Temperature Range: −55°C to +100°C, to 125°C with 50% derating.

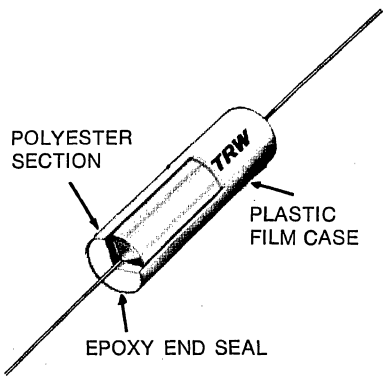
Construction: Metallized Polyester, non-inductive winding.

Polyester Dielectric

Type 663UW

- **For maximum space saving**
- **"Instrument" quality**
- **Tough, moisture resisting case**
- **Conservatively rated**
- **Tolerances to ±1%**
- **Capacitance Range 0.001 thru 2.0 mfd**

CUT-AWAY SHOWS CONSTRUCTION



Type 663UW capacitors are compatible in size with other subminiature transistor components. In addition, they are conservatively designed and rated for long life and reliable service in high quality equipment and instrument applications. The Polyester winding is covered with a thin, tough plastic case adding less than 1/64" to the body diameter. The dense thermosetting epoxy endfill bonds securely to the lead and case. This line is designed and rated for long life and reliable service.

SPECIFICATIONS

Insulation Resistance: Greater than 70,000 megohms-microfarads at 25°C, but the IR need not exceed 140,000 megohms.

Dissipation Factor: Less than 1.0% when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 1.0 mfd at 25°C ±5°C. Capacitance values greater than 1.0 mfd measured at 60 ±6 Hz.

Life Test: 250 hours at 85°C and 125% of Rated Voltage. No more than one failure allowed of 18 units tested.

Dielectric Strength: 2 times rated voltage for one minute through a limiting resistance of 100 ohms/volt.

Lead Pull Test: Steady force of 4 lbs. applied axially for 60 sec. on diameters up to 0.359 — 8 lbs. on diameters over 0.359.

Humidity Resistance: Will meet or exceed requirements of MIL-C-27287, Paragraph 3.12, when tested in accordance with MIL-STD-202, Method 103, Condition B. One failure allowed of 18 units tested.

Temperature Range: May be operated at rated voltage from −55°C to +85°C and to +125°C with 50% derating.

Voltage Range: 100 thru 1000 VDC.

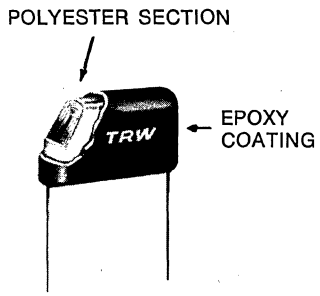
Winding Design: Extended foil construction.

Polyester Dielectric

Type 601PE-601CPE

Dipped Epoxy Coating

- **Styled for "High Density" packaging**
- **Extremely stable**
- **Ideal replacement for ceramic discs**
- **High insulation resistance**
- **Full range of values**
- **Tolerances to ±5%**



Now available in the full range from 35V to 600V and 0.001 to 1.0 mfd, the "slim" 601 series is even more valuable in high density applications. Thin, modular packaging provides maximum capacitance for minimum chassis area. It is engineered to replace ceramic discs where stability with temperature change is important.

SPECIFICATIONS

Insulation Resistance: Minimum values according to Table 1. (Refer to graph for IR at other temperatures.)

Temperature	+25°C	+85°C	+125°C
Megohms X Microfarads	50,000	2,000	20
Need Not Exceed (Megohms)	100,000	5,000	100

Measured after 2 minutes electrification at 100 VDC or rated voltage, whichever is greater.

Dissipation Factor: Less than 1.0% when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 1.0 mfd at 25°C ±5°C. Capacitance values greater than 1.0 mfd measured at 60 ±6 Hz.

Dielectric Strength: Twice rated voltage for 1 minute through 100 ohms per volt limiting resistance.

Humidity Resistance: These designs comply with test requirements per MIL-STD-202, Method 103, Condition B, no voltage applied. Minimum resistance after test, 15,000 megohms.

Life Test: 1000 hrs. @ +85°C and 125% of rated voltage. No more than one failure allowed of 24 units tested.

Temperature Cycling: MIL-STD-202, Method 102, Condition D, no voltage applied. Minimum insulation resistance after test 25,000 megohms. Less than 1% change in capacitance.

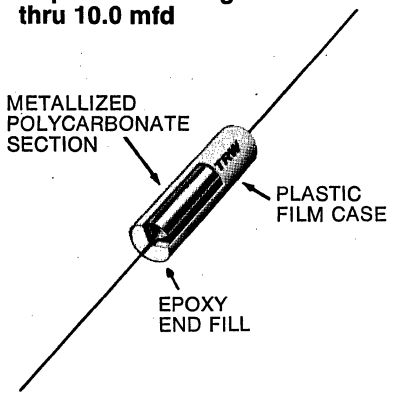
Capacitance Tolerance: Within specified tolerance when measured at 1000 ±20 Hz, 25°C ±5°C (standard is 20%).

Temperature Range: May be operated at rated voltage from −55°C to +85°C. Derate to 50% when operating at 125°C.

Metallized Polycarbonate

Type X463UW

- **Small size — Lightweight**
- **Very low temperature coefficient**
- **Fully rated from −55°C to +125°C**
- **High insulation resistance**
- **Excellent retrace**
- **Tolerances to ±1%**
- **Capacitance range from 0.001 thru 10.0 mfd**



The increasing demand for reduction in size and weight coupled with requirements for enhanced circuit performance, requires capacitors which incorporate the latest developments in component technology. TRW has now introduced a capacitor which combines the improved electrical performance of polycarbonate and the size and weight reductions associated with a metallized dielectric.

SPECIFICATIONS

Insulation Resistance: Table 1, minimum values.

Temperature	+25°C	+85°C	+125°C
Megohms X Microfarads	60,000	6,000	600
Need Not Exceed (Megohms)	200,000	50,000	5,000

Measured after 2 minutes electrification at rated voltage

Dissipation Factor: Less than 0.3% at 25°C when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 10 mfd.

Dielectric Strength: Twice rated voltage for one minute through a limiting resistance of 100 ohms/volt.

Life Test: 250 hours at 125°C and 140% rated voltage with no more than one failure out of 12 units tested.

Temperature Range: −55°C to +125°C with no voltage derating.

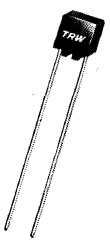
Humidity Resistance: No more than one failure allowed of 12 units tested when tested as outlined in MIL-STD-202, Method 103, Condition B, with 100 volts or rated voltage applied, whichever is less.

Voltage Ranges: 50, 100, 200, 400 VDC.

Metallized Dielectric

Type X440

- **Minimum possible size — Lightweight**
- **Very low temperature coefficient**
- **Fully rated from −55°C to +125°C**
- **High insulation resistance**
- **Tolerances to ±1%**
- **Capacitance Range 0.001 thru 0.10 mfd**



The X440 has been specifically designed to be a real help in the ever increasing problem of fitting components in today's miniaturized designs. Its absolute minimum size, precision dimensions, and the close tolerance lead spacing permit space savings impossible before. Additionally, the highly impressive electrical properties of polycarbonate are of immense value in modern high performance circuitry.

Standoffs on the bottom of the premolded case provide for rigid, secure mounting and facilitate cleaning of the printed circuit boards. Leads are uniformly and accurately spaced on 0.0200″ centers.

SPECIFICATIONS

Voltage Rating: 50 VDC from −55°C to +125°C.

Insulation Resistance: Greater than 500,000 megohms @ 25°C.

Dissipation Factor: Less than 0.3% at 1K Hz @ 25°C.

Capacitance Change with Temperature:
a. Between 0°C and 125°C, as referenced to 25°C, capacitance change will not exceed +½ −1½%.
b. TC of capacitance characteristic is 0 +50 −150 PPM/°C between 0°C and 125°C.

Dielectric Strength: 200% of rated voltage applied for 2 minutes through limiting resistance of 100 ohm/volt.

Life Test: Tested in accordance with MIL-C-27287, 250 hrs., 125°C @ 1.4 RV. IR greater than 70% of original requirement, DF less than 0.3%, cap. change less than 1%.

Humidity Resistance: Tested in accordance with MIL-C-27287, 40°C, 95% RH, 240 hours. IR greater than 10 gigaohms @ 25°C. DF less than 0.3%.

Lead Pull Test: 5 lbs. in any direction.

Construction: Metallized polycarbonate dielectric, non-inductive winding. Epoxy case with standoffs.

Leads: 24 gauge tinned solid wire on 0.2″ centers.

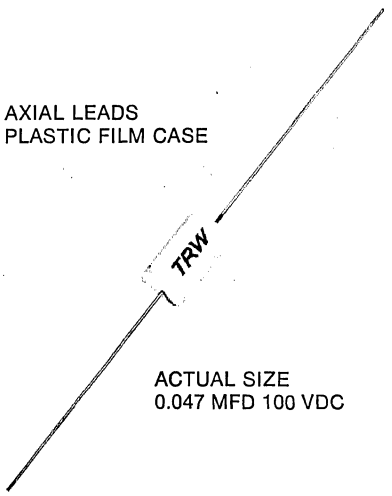
Metallized Polyester Flattened

Type X659F

- **Smallest possible size**
- **High insulation resistance**
- **Self-healing — Long stable life**
- **Full voltage range — 50 thru 400W VDC**
- **Capacitance values to 20.0 mfd**



TRW Type X659F adds a complete new dimension to circuit board layout by providing a metallized polyester, wound flattened capacitor, in sizes never before available. This advance design which utilizes the very thin gauges of metallized polyester, coupled with TRW's advanced manufacturing technology and in-house metallizing capability and control, offers the same rugged durability and reliability as all TRW Capacitors.

This basic reliability and the proven performance record of metallized polyester makes the X659F the ideal choice where freedom in equipment design and durability is required.

SPECIFICATIONS

Insulation Resistance: Minimum values.

Temperature	+25°C	+85°C	+125°C
Megohms X Microfarads	30,000	3,000	50
Need Not Exceed (Megohms)	30,000	3,000	50

Measured after 2 minutes electrification at rated voltage.

Dissipation Factor: Less than 1.0% when measured at or referred to 1000 ±20 cps for capacitance values up to and including 1.0 mfd at 25°C ±5°C except for units having a thickness dimension of 0.170 or less, the DF shall not exceed 1.5%. Capacitance values greater than 1.0 mfd measured at 60 ±6 cps.

Temperature Range: −55°C to 100°C; to +125°C with 50% derating.

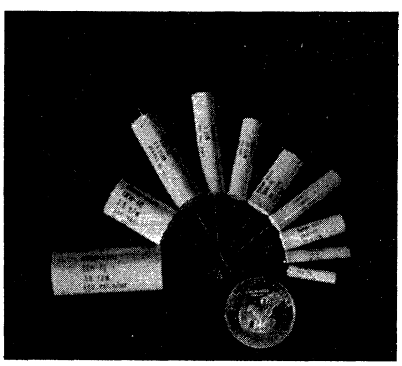
Humidity Resistance: Tested as outlined in MIL-STD-202C, Method 103B, Condition A. After final conditioning IR, no less than ⅓ minimum values listed in Table 1. Dielectric strength to withstand test as outlined in Para. 3.4. One failure allowed of 18 units tested.

Dielectric Strength: 200% rated voltage for one minute through a limiting resistance of 100 ohms/volts.

Metallized Polyester Dielectric

Types TRW-40, -41 and -42

- **AC voltage ratings from 330 to 460 volts, 50/60 Hz**
- **Capacitance values to 2.0 mfd**
- **Flame-retardant tape wrap case**



PERFORMANCE

Type TRW-40, -41 and -42 capacitors are constructed from metallized polyester film and offer small size, less weight and long reliable life without the use of impregnants. The flame retardant tape wrap and end fill provides both physical and environmental protection.

The full range of capacitance values available gives these capacitors broad usage in the electrical and electronic fields.

APPLICATIONS

Type TRW-40, -41 and -42 capacitors can be utilized for applications such as motor run, motor speed control, and noise filtering, as found in computer peripherals such as terminals, printers and disc drives; in large and small cooling fans and small motors of all types. Special terminals such as stranded insulated leads or quick disconnects are available on a customized basis. Consult the factory for details.

SPECIFICATIONS

Type	TRW-40	TRW-41	TRW-42
Capacitance Range	0.047 to 2.0 mfd	0.047 to 2.0 mfd	0.01 to 2.0 mfd
Dielectric Strength*	900 VDC	1500 VDC	2100 VDC
AC Voltage Rating	330 Vrms, 50/60 Hz	370 Vrms, 50/60 Hz	460 Vrms, 50/60 Hz
Corona Onset (min.)	480 Vrms, 60 Hz	460 Vrms, 60 Hz	600 Vrms, 60 Hz

* For one minute through a limiting resistance of 100 ohms/volt

Insulation Resistance:

Temperature	+25°C	+85°C
Megohms x Micorfarads	30,000	3,000
Need Not Exceed (Megohms)	30,000	3,000

Measured after two minutes electrification at 400 VDC

Dissipation Factor: Less than 1.0% when measured or referred to 1000 ±20 Hz for capacitance values up to and including 1.0 mfd at 25 ±5°C. Capacitance values larger than 1.0 mfd shall be measured at 60 ±6 Hz.

Capacitance: Shall be within specified tolerance when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 1.0 mfd. Capacitance values larger than 1.0 mfd shall be measured at 60 ±6 Hz.

Humidity Resistance: When tested as in MIL-STD-202E, Method 103B, Condition B no more than one failure allowed of eighteen units tested.

Life Test: 1000 hours at +85°C and 125% of rated AC voltage (50-60 cps).

Temperature Range: −55°C to +85°C.

Construction: Metallized construction.

Case: Flame retardant polyester tape wrap with flame retardant epoxy endfill.

Lead Material: Tinned copperweld wire.

Lead Pull Test: Will withstand for one minute a steady force of the following magnitude:

4 lbs. — Diameters up to and including 0.465 dia.

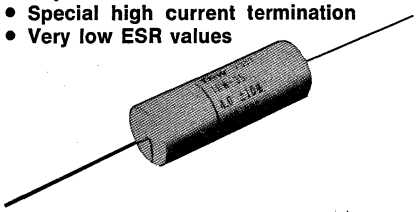
8 lbs. — Diameters over 0.466

TRW CAPACITOR DIVISION • 301 West O Street • Ogallala, Nebraska 69153 • Phone: (308) 284-3611 • TWX: 910-620-0321

Metallized Polypropylene Dielectric

Type TRW-35

- **Designed for switching power supply applications**
- **Rated for 20 KHz usage**
- **High current — up to 9A rms**
- **Capacitance to 30 mfd**
- **Special high current termination**
- **Very low ESR values**



PERFORMANCE

The TRW-35 is designed specifically for switching power supply applications where high current, high capacitance range and low ESR values are important.

The Metallized polypropylene TRW-35 shows negligible shift in capacitance under long term exposure to humidity, operating life and temperature cycling. Insulation resistance, dielectric absorption and dissipation factor properties are all superior to those of electrolytic capacitors presently used by switching power supply manufacturers. Added to these features are size and weight savings.

APPLICATIONS

The TRW-35 is used for input filtering, hi-frequency transformer D.C. blocking, and output filtering. As an input filter it provides EMI protection back into the line (generated by the switch) and serves as a quasi-constant current source (turn on for the switch). As a D.C. blocking capacitor it prevents D.C. saturation of the hi-frequency transformer caused by switch unbalance while passing the AC square wave with little loss. As an output filter it provides a low impedance path for high frequency ripple filtering.

Unlike the electrolytic capacitor often used for such applications, the TRW-35 exhibits little or no capacitance roll-off with increasing frequency. The TRW-35 features ESR typically an order of magnitude or more under the ESR of equivalent electrolytic capacitance values.

In filter designs where capacitance values of 30 mfd or smaller are adequate for system performance, the TRW-35 offers impedance characteristics that can significantly enhance the overall system design.

SPECIFICATIONS

Dissipation Factor: Shall be less than 0.1% when measured at or referred to 1000 Hz ±20 Hz. Typical value is 0.05%.

Capacitance: Shall be within specified tolerance when measured at or referred to 1000 Hz ±20 Hz.

Insulation Resistance: Shall be greater than 100,000 megohms – Micro Farads but need not exceed 500,000 megohms when tested at 25°C and electrified at 100 VDC for 2 minutes.

ESR: The 100 KHz ESR values shall not exceed the values shown.

Construction: Non-inductive winding, polypropylene dielectric, metallized electrodes with special high current termination.

Case: Polyester tape wrap with epoxy endseals.

Lead Material: Tinned copper wire.

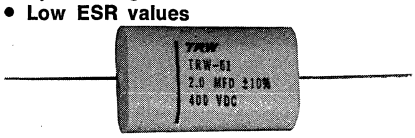
Temperature Rating: 55°C to 105°C with no voltage derating.

Voltage: 100 thru 400 VDC.

Metallized Polyester

Type TRW-61

- **Rated for 60 KHz usage**
- **High current — up to 4A rms**
- **Capacitance to 4.7 mfd**
- **White polyester tape wrap case**
- **Special high current termination**
- **Low ESR values**



PERFORMANCE

The TRW-61 is designed specifically for switching power supply applications where current and low ESR Values are important. The metallized polyester TRW-61 shows negligible shift in capacitance under long exposure to humidity, operating life and temperature cycling. Insulation resistance, dielectric absorption and dissipation factor properties are all superior to those of electrolytic capacitors presently used by switching power supply manufacturers.

These features, plus size and weight savings in SPS designs, make the TRW-61 the logical capacitor for performance and design of switching power supplies requiring medium current ratings.

SPECIFICATIONS

Insulation Resistance: Table 1, minimum values.

Insulation Resistance	+25°C	+85°C
Megohms & Microfarads	30,000	3,000
Need not Exceed (Megohms)	30,000	3,000

Measured after 2 minutes electrification at rated voltage.

Dissipation Factor: Less than 1.0% when measured at or referred to 1000 ±20 Hz at 25°C.

Temperature Range: −55°C to +100°C.

Humidity Resistance: Tested as outlined in MIL-STD-202C, Method 103B, Condition A. After final conditioning IR, no less than ⅓ minimum values listed in Table 1. Dielectric strength to withstand test as outlined in Para. 3.4. One failure allowed of 18 units tested.

Capacitance: Shall be within specified tolerance when measured at or referred to 1000 ±20 Hz at 25°C.

Capacitor Tolerance: Standard Tolerance ±20%; also available in ±10% and ±5%.

Equivalent Series Resistance (ESR): Shall be less than shown when measured at 100 KHz.

Case: Polyester tape wrap with epoxy end seals.

Lead Material: Tinned solid copper wire.

RC Snubber Network

Type TRW-39A

- **Resistor: 3.9 ohm ½ watt ±10% carbon composition**
- **Capacitor: 0.1 mfd ±20%, 50 VDC**
- **White polyester tape wrap case**
- **Low inductance, extended foil construction**
- **Rugged polyester-foil design**
- **RC = 0.39 micro second nominal**

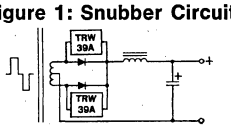
PERFORMANCE

This rugged RC network is designed for snubber applications across Schottky diodes operating in 20 KHz switching power supplies and provides critical damping of the ringing encountered in many circuits.

APPLICATIONS

Specifically designed for applications in 20 KHz switching power supplies, the TRW-39A provides critical damping and reverse voltage protection for the Schottky diode. The leakage inductance of the high frequency power transformer causes ringing of the reverse voltage when diode conduction abruptly ceases. This can cause Schottky diode failure. Figure 1 shows the snubber used across each diode. For other RC values contact TRW Capacitors, Application Engineering.

Figure 1: Snubber Circuit



SPECIFICATIONS

Insulation Resistance: Greater than 140K megohms when measured at 25°C after 2 minute electrification at 50 VDC.

Dissipation Factor: Less than 1.8% at 1000 Hz.

Dielectric Strength: Greater than 150 VDC.

Leads: Tin plated solid wire. 0.025/0.035 dia.

Wound Film-Foil Capacitors

GENERAL-PURPOSE, WELDED TAB CONSTRUCTION

Polystyrene Film-Foil

TRW Designation	Capacitance Range	Standard Tolerances (±%)	Rated Voltage (VDC)	Temperature Range (°C)	Lead Configuration	Case Style
Type 611	20-100,000 pF	1 through 20	33-630	−40 to +70	Axial Offset Leads	Tubular, Heat Shrunk
Type 616	20-100,000 pF	1 through 20	33-630	−40 to +70	Axial Centered Leads	Tubular, Heat Shrunk
Type 619	20-30,000 pF	1 through 20	33-630	−40 to +70	Preformed	Tubular, Heat Shrunk

Polypropylene Film-Foil

TRW Designation	Capacitance Range	Standard Tolerances (±%)	Rated Voltage (VDC)	Temperature Range (°C)	Lead Configuration	Case Style
Type 636	220-27,000 pF	1 through 20	160 and 630	−40 to +85	Axial Centered Leads	Tubular, Heat Shrunk
Type 639	220-27,000 pF	1 through 20	160 and 630	−40 to +85	Preformed	Tubular, Heat Shrunk

Polyester Film-Foil

TRW Designation	Capacitance Range	Standard Tolerances (±%)	Rated Voltage (VDC)	Temperature Range (°C)	Lead Configuration	Case Style
Type 641	0.001-0.1 μF	10, 20	160, 400 and 630	−40 to +85	Axial Offset Leads	Tubular, Heat Shrunk

PROFESSIONAL STYLE, EXTENDED FOIL CONSTRUCTION

Polystyrene Film-Foil

TRW Designation	Capacitance Range	Standard Tolerances (±%)	Rated Voltage (VDC)	Temperature Range (°C)	Lead Configuration	Case Style
Type 602	100 pF to 600 nF	0.625 through 5.0	63-1000	−40 to +70	Radial	Epoxy-filled Tubular Plastic
Type 604	47 to 250,000 pF	1.0, 2.5, 5.0	100, 200, 500	−40 to +85	Radial	Epoxy-filled Rect. Plastic
Type 605	100 pF to 30 nF	0.625 through 5.0	63	−40 to +70	Radial	Epoxy-filled Square Plastic
Type 607	100 pF to 680 nF	0.625 through 5.0	63-750	−40 to +70	Radial	Tubular Tape Wrap

Wound Capacitors

Metallized Polycarbonate

TRW Designation	Capacitance Range	Standard Tolerances (±%)	Voltage Range (V dc)	Temperature Range (°C)	Lead Configuration	Case Style
Series H	.01-15.0 μF	5, 10, 20	50-600	−55 to +125	axial	oval tape wrap
Series HE	.01- 5.0 μF	5, 10, 20	100-600	−55 to +125	axial	rect. epoxy case
Series H2E	.01- 5.0 μF	5, 10, 20	100-600	−55 to +125	radial	rect. epoxy case
Series HL	.01-15.0 μF	5, 10, 20	100-600	−55 to +125	axial	hermetically sealed tubular metal case
Series HG	.01-10.0 μF	5, 10, 20	100-600	−55 to +125	axial	hermetically sealed rect. metal case

Metallized Polyester

TRW Designation	Capacitance Range	Standard Tolerances (±%)	Voltage Range (V dc)	Temperature Range (°C)	Lead Configuration	Case Style
Series D	.01-15.0 μF	5, 10, 20	50-600	−55 to +125	axial	oval tape wrap
Series DE	.01-10.0 μF	5, 10, 20	100-600	−55 to +125	axial	rect. epoxy case
Series D2E	.01- 8.0 μF	5, 10, 20	100-600	−55 to +125	radial	rect. epoxy case
Series DL	.01-15.0 μF	5, 10, 20	100-600	−55 to +125	axial	hermetically sealed tubular metal case
Series DG	.01-15.0 μF	5, 10, 20	100-600	−55 to +125	axial	hermetically sealed rect. metal case

Polyester-Foil

TRW Designation	Capacitance Range	Standard Tolerances (±%)	Voltage Range (V dc)	Temperature Range (°C)	Lead Configuration	Case Style
Series E	.001-5.0 μF	5, 10, 20	100-600	−55 to +125	axial	oval tape wrap
Series EE	.001-2.0 μF	5, 10, 20	100-600	−55 to +125	axial	rect. epoxy case
Series EL	.001-5.0 μF	5, 10, 20	100-600	−55 to +125	axial	hermetically sealed tubular metal case
Series EG	.001-3.0 μF	5, 10, 20	100-600	−55 to +125	axial	hermetically sealed rect. metal case
Series EBC	.001-1.0 μF	5, 10, 20	100-600	−55 to +125	axial	tubular tape wrap meets MIL-C-27287

Polystyrene-Foil

TRW Designation	Capacitance Range	Standard Tolerances (±%)	Voltage Range (V dc)	Temperature Range (°C)	Lead Configuration	Case Style
Type 602	100 pF-.60 μF	0.625-5.0	63-1000	−40 to +70	radial	tubular epoxy case

Series X	.001-2.0 μF	5, 10, 20	50-400	−55 to +85	axial	oval tape wrap
Series XL	.001-2.0 μF	5, 10, 20	50-400	−55 to +85	axial	hermetically sealed tubular metal case
Series XG	.001-.82 μF	5, 10, 20	50-400	−55 to +85	axial	hermetically sealed rect. metal case

Metallized Polypropylene

TRW Designation	Capacitance Range	Standard Tolerances (±%)	Voltage Range (V dc)	Temperature Range (°C)	Lead Configuration	Case Style
Style EPYC4	.01-15.0 μF	1.0-20	100-400	−55 to +105	axial	tubular tape wrap

Paper/Polyester Dielectric

TRW Designation	Capacitance Range	Standard Tolerances (±%)	Voltage Range (V dc)	Temperature Range (°C)	Lead Configuration	Case Style
Series BW	.001-.20 μF	5, 10, 20	2000-30,000	−55 to +125	axial	oval tape wrap
Series BWE	.001-.20 μF	5, 10, 20	2000-30,000	−55 to +125	axial	rect. epoxy case

Metallized Paper, Epoxy Impregnated

TRW Designation	Capacitance Range	Standard Tolerances (±%)	Voltage Range (V dc)	Temperature Range (°C)	Lead Configuration	Case Style
Series M	.01-10.0 μF	5, 10, 20	100-600	−55 to +125	axial	oval tape wrap
Series ME	.01- 8.0 μF	5, 10, 20	100-600	−55 to +125	axial	rect. epoxy case
Series M2E	.01- 8.0 μF	5, 10, 20	100-600	−55 to +125	radial	rect. epoxy case
Series ML	.01-15.0 μF	5, 10, 20	100-600	−55 to +125	axial	hermetically sealed tubular metal case
Series MG	.01-15.0 μF	5, 10, 20	100-600	−55 to +125	axial	hermetically sealed rect. metal case

Note: These metallized paper capacitors are also available with wax impregnation instead of epoxy. Specifications are similar, but maximum operating temperature is limited to +85°C. To order, substitute "W" for "M" in series number (e.g., Series WL).

Ceramic Disc Capacitors

Type 501 Class 1
Medium Voltage
- Suitable for use in high-frequency, high-Q, and temperature-compensated circuits
- Recommended for both UHF and VHF applications
- High capacitance stability coupled with long life
- Capacitance range of .82 to 470 pF
- Voltage ratings of 250 and 500 VDC
- Temperature characteristics of NPO to N5250

Type 502 Class 1
High Voltage
- Ideal for temperature compensation in high-power circuits
- Controlled temperature coefficient, low dissipation factor, high dielectric strength and large dissipation area
- Capacitance range of 2.2 to 620 pF
- Voltage ratings of 1000 to 6000 VDC
- Temperature characteristics of NP0 to N5250

Type 506 Class 2
Medium Voltage
- Suitable for radio frequency coupling circuits and other printed circuit board applications
- Extended frequency range of 100 MHz, extreme temperature stability, long life and small size
- Capacitance range of 100 to 4700 pF
- Voltage ratings of 250 and 500 volts
- Temperature characteristics of X5D to X5S

Type 507 Class 2
High Voltage
- Recommended for high-power circuits in TV applications
- Stable at high frequency, extremely resistant to high humidity conditions
- Capacitance range of 56 to 6200 pF
- Voltage ratings of 1000 to 6000 VDC
- Temperature characteristics of X5D to X5T

Type 509 Class 2
Medium Voltage
- Designed for coupling and bypass circuits where supply voltage is 500 VDC or less
- Offers small size in a medium voltage rating
- Capacitance range of 250 to 10,000 pF
- Voltage ratings of 250 and 500 VDC
- Temperature characteristics of X5U, Y5U

Type 511 Class 2
Medium Voltage
- Exhibits excellent electrical characteristics in transistorized circuits in bypass networks
- Ideal where space is at a premium and high capacitance value is required
- Capacitance range of 470 to 15,000 pF
- Voltage ratings of 250 and 500 VDC
- Temperature characteristics of X5V and Z5U

Type 512 Class 2
High Voltage
- Well-suited for TV and computer deflection systems
- Used also in bypass and decoupling circuits where high voltage capacitors are required
- Features high voltage performance, small size, high K, and excellent resistance to humidity
- Capacitance range of 470 to 10,000 pF
- Voltage ratings of 1000 and 2000 VDC
- Temperature characteristics of Y5V and Z5U

Type 516 Class 2
Low Voltage
- Designed for radio frequency bypass circuits in auto and home radios, TVs and computers
- Combines small size with superior performance characteristics
- Capacitance range of .0033 to .047 mfd
- Voltage ratings of 50 and 100 VDC
- Temperature characteristic of Z5U

NOTE: The listed ceramic disc capacitors are standard catalog devices. However, variations in electrical characteristics are available in most cases. Please contact TRW Universal Capacitors for assistance in your design applications.

Electrical Specifications

TRW Part No.	Dissipation Factor	Min. Insulation Resistance	Dielectric Strength
Type 501	0.1% max. for C=50 pF and above, 0.8% max. for others; at 5 V_{rms}	10 x 10^9 ohms at 100 VDC	250% of rated voltage, max. I=50 mA
Type 502	0.2% max. for C=50 pF and above, 0.8% max. for others; at 5 V_{rms}	10 x 10^9 ohms at 100 VDC	170% of rated voltage, max. I=50 mA
Type 506	2.5% max. at 1 V_{rms}	10 x 10^9 ohms at 100 VDC	250% of rated voltage, max. I=50 mA
Type 507	2.5% max. at 1 V_{rms}	10 x 10^9 ohms at 100 VDC	170% of rated voltage, max. I=50 mA
Type 509	2.5% max. at 1 V_{rms}	10 x 10^9 ohms at 100 VDC	250% of rated voltage, max. I=50 mA
Type 511	3.0% max. at 1 V_{rms}	10 x 10^9 ohms at 100 VDC	250% of rated voltage, max. I=50 mA
Type 512	3.0% max. at 1 V_{rms}	10 x 10^9 ohms at 100 VDC	200% of rated voltage, max. I=50 mA
Type 516	3.0% max. at 0.1 V_{rms}	5 x 10^9 ohms at 10 VDC	250% of rated voltage, max. I=50 mA

Reference Conditions: T=25° ± 1°C, F=1.0 ± 0.2 kHz, RH=63 to 67%.

TUSONIX SLC™ *

Ceramic Capacitors—Disc

Applications and Features

TUSONIX Ceramic Disc Capacitors offer high performance in a complete range of ratings, values, and sizes. The complete line of voltage ratings offers the designer the convenience of selecting the exact capacitor rating required for his application. TUSONIX Discs are available in 100-200-500 VDC; 1-2-3-4-5 and 6 KV. Capacity increases per size for voltages less than 500 volts and decreases per size for voltages greater than 500 volts. Where voltage rating is not critical, we recommend our standard 500 volt line. (For complete details, consult our Ceramic Disc Capacitor catalog.)

General Electrical Specifications

Ceramic Disc Capacitors are available in a broad range of dielectric constants. This allows a wide selection of capacitance values.

Temperature Compensating

Ceramic Capacitors (NPO thru N750) are ideal for applications requiring very precisely controlled capacitance change with temperature, high Q and very small capacitance tolerance.

Extended Temperature Compensating

Disc Capacitors (1500 thru N5600) are capacity sensitive to temperature in varying degrees, and are useful as temperature compensating elements for stabilization over a wide temperature range.

General Purpose or Hi-K

Specials

Special disc products are available from TUSONIX upon request, including details on TUSONIX's approval for U.L. line by-pass capacitors and approval to Mil-C-20 and Mil-C-11015.

Physical Characteristics

Leads—All values up to and including 2 KV are available with 20, 22 and 24 AWG leads, except body sizes. 655" max. and larger available with 20 or 22 AWG only. All values up to and including 6 kV are available with 20 or 22 AWG leads.

Body insulation—conformal coating.

Standard max. coating on leads is .125"; closer control is optional at extra cost.

Marking—Trademark, Cap, Tol., T.C., and Voltage (Voltage omitted on 500V).

TUSONIX also offers inside kink leads, outside kink leads and short pin leads to the electronic industry for use in printed wiring board applications.

Special physical requirements are also available. Special lead spacing requirements are optional upon request, in addition to standard nominal lead spacings.

TUSONIX SLC™*

Ceramic Capacitors—WEECON® Plate

Applications and Features

TUSONIX WEECON Plate Ceramic Capacitors offer the broadest selection of ceramic formulations and package sizes available. Capacitance values range from 1 pF through .082 uF; a variety of TC materials and tolerances is available. The range of temperature characteristics adapts these capacitors from the ultra stable requirements of tuned circuits to the general purpose needs for coupling and by-pass applications. Voltages are from 25V to 500V. (For complete details, consult our WEECON® Ceramic Capacitor catalog.)

Physical Characteristics

Weecon **Temperature Compensating** Ceramic Capacitors are ideal for applications demanding precisely controlled capacitance changes with temperature variation. They are well suited for high Q circuits requiring optimum frequency stability and have excellent retrace characteristics. **Extended Temperature Compensating** Weecons are indicated where large controlled capacitance change with temperature variation is a factor. For applications where volumetric efficiency is of prime importance, **Stable** Weecons will provide higher capacitance values, in smaller packages with better reliability. TUSONIX **General Purpose** Weecons are ideal for circuits requiring the utmost in volumetric efficiency at rated temperatures.

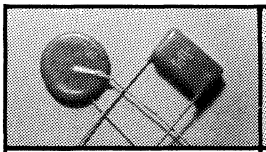
Ceramic Capacitors—High Voltage

Applications and Features

High Voltage Ceramic Capacitors have been one of TUSONIX outstanding component capabilities for many years. These high quality components are used in a broad variety of applications: electric utility transformers, power supplies and voltage multipliers for CRT displays, navigation equipment, electro-optic equipment, and image intensifiers for night vision apparatus.

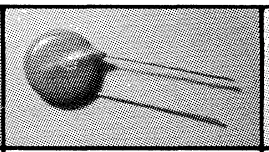
This page details only a few of our high voltage capabilities. The styles shown can be adapted to specific mechanical and electrical requirements of our customers . . . certainly one of the inherent advantages of ceramic capacitors. Custom designs are our specialty.

Disc, Cylindrical, Rectangular Ceramic Capacitors

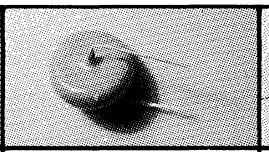


Radial wire leads, 20 ga., 1.25" (31.75) min. length

Available in:
3, 5, 10kV
in both disc and rectangular

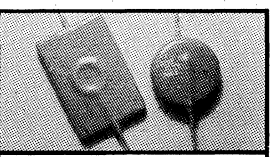


Offset wire leads, 20 ga., 1.25" (31.75) min. length
Available in:
3, 5, 10KV



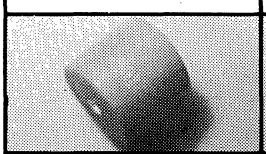
Radial formed leads attached axially, 20 ga., 2.0" (50.80) min. length
Available in:
3, 5, 10, 15kV
1" min. lead spacing required for 15kV

Axial wire leads, 20 ga., 2.0" (50.80) min. length
Available in:
3, 5, 10, 15, 20, 25, 30kV
1.250" max. dia. for over 10kV



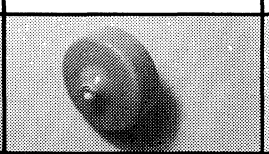
Opposed radial wire leads, 20 ga., 2.0" (50.80) min. length

Available in:
3, 5, 10kV
In both disc and rectangular



Potted female threaded stud terminals, 8-32 threads

Available in:
3, 5, 10, 15 20, 25, 30kV



Female threaded stud terminals, 8-32 threads

Available in:
3, 5, 10, 15, 20, 25, 30kV

Male stud terminals, no threads, varnish coating standard.

Available in:
3, 5, 10, 15, 20, 25, 30kV

Electrode with no terminals (single pattern), or specify if tinning is required.
Available in:
Rectangular: **3,5, 10kV** and limited capacitance values for **15, 20, 25, 30kV**
Disc: **3, 5, 10, 15, 20, 25, 30kV**

SPECIALS

Nonstandard or special design part
Available in:
3, 5, 10, 15, 20, 25, 30kV
Note: Can be manufactured with virtually any special terminal to meet specific needs.

TUSONIX SLC™*

Ceramic Capacitors—Trimmers

Applications and Features

TUSONIX leads the way in the miniaturization of trimmers, or variable ceramic capacitors. Developments such as those illustrated below have established TUSONIX as a leader in the state of the art. More than 30 years of experience in Trimmer design and technology have enabled TUSONIX to offer engineers the world's most complete line of ceramic trimmer capacitors.

During the past 10 years the ceramic trimmer capacitor has become the most popular trimmer in the electronics industry. The inherent reliability, small size, low cost and wide selection of available electrical characteristics are major factors in the ceramic capacitor's continuing popularity among design engineers.

TUSONIX produces a broad range of fixed and variable (trimmer) ceramic capacitors. Complete research, development and manufacturing of the ceramic dielectric itself and the finished capacitor is performed by TUSONIX. Today TUSONIX is recognized as one of the world's leading suppliers of quality ceramic capacitors.

(For complete details consult Trimmer catalog.)

Series 513—
First True Ultraminiature Quality Trimmer

Working Voltage ..... A: 100 WVdc to 85°C.
G: 25 WVdc to 85°C.
Dielectric Strength ..... 2 times WVDC for 1 to 5 seconds
Operating Temperature Range ..... -55°C. to +85°C.
Q Factor @ 1MHz ..... 500 Min. (Dielectric Code A)
200 Min. (Dielectric Code G)
Torque ..... 0.3 to 2.0 oz. in.
Qualification Specification ..... TUSONIX Spec. 513
Dimensions in inches ..... For dimensions <.125" tol. is ±.005
For dimensions >.126" tol. is ±.015

Series 538—
First ⅜" Dia. Trimmer in the Industry

Working Voltage ..... A, B, C: 350 WVdc @ 85°C.; 200 WVdc @ 125°C.
D & F: 200 WVdc @ 85°C.; 100 WVdc @ 125°C.
Dielectric Strength ..... 500 Vdc for 1-5 sec.
Operating Temperature Range ..... -55°C. to +125°C.
Q Factor @ 1 MHz ..... 500 Minimum
Torque ..... 1-6 oz. in.
Qualification Specification ..... TUSONIX Spec. 500
For dimensions ..... <.125", tolerance is ±.005
For dimensions ..... ≥.126", tolerance is ± 015
Except where noted.

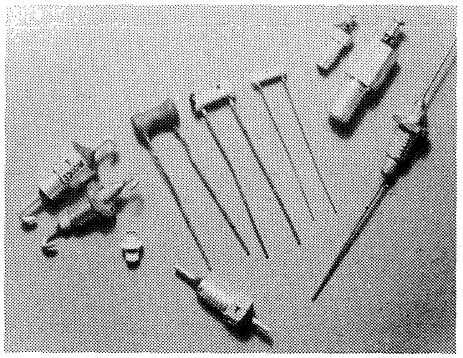
*SLC stands for Single-layer Ceramic Capacitors.



TUSONIX SLC™*

Ceramic Capacitors—Tubular, Feed-thru, Stand-off

Applications and Features

TUSONiX offers a complete line of ceramic tubular, feed-thru, and stand-off capacitors for general purpose, temperature compensation, and high stability applications. All forms feature compact package sizes, many different lead and mounting options, rugged construction, and proven high reliability in a variety of demanding applications such as RF by-passing and filtering. MIL types are also available in each form. (For complete details, consult our Ceramic Tubular, Feed-thru, and Stand-off Capacitor Catalog.)

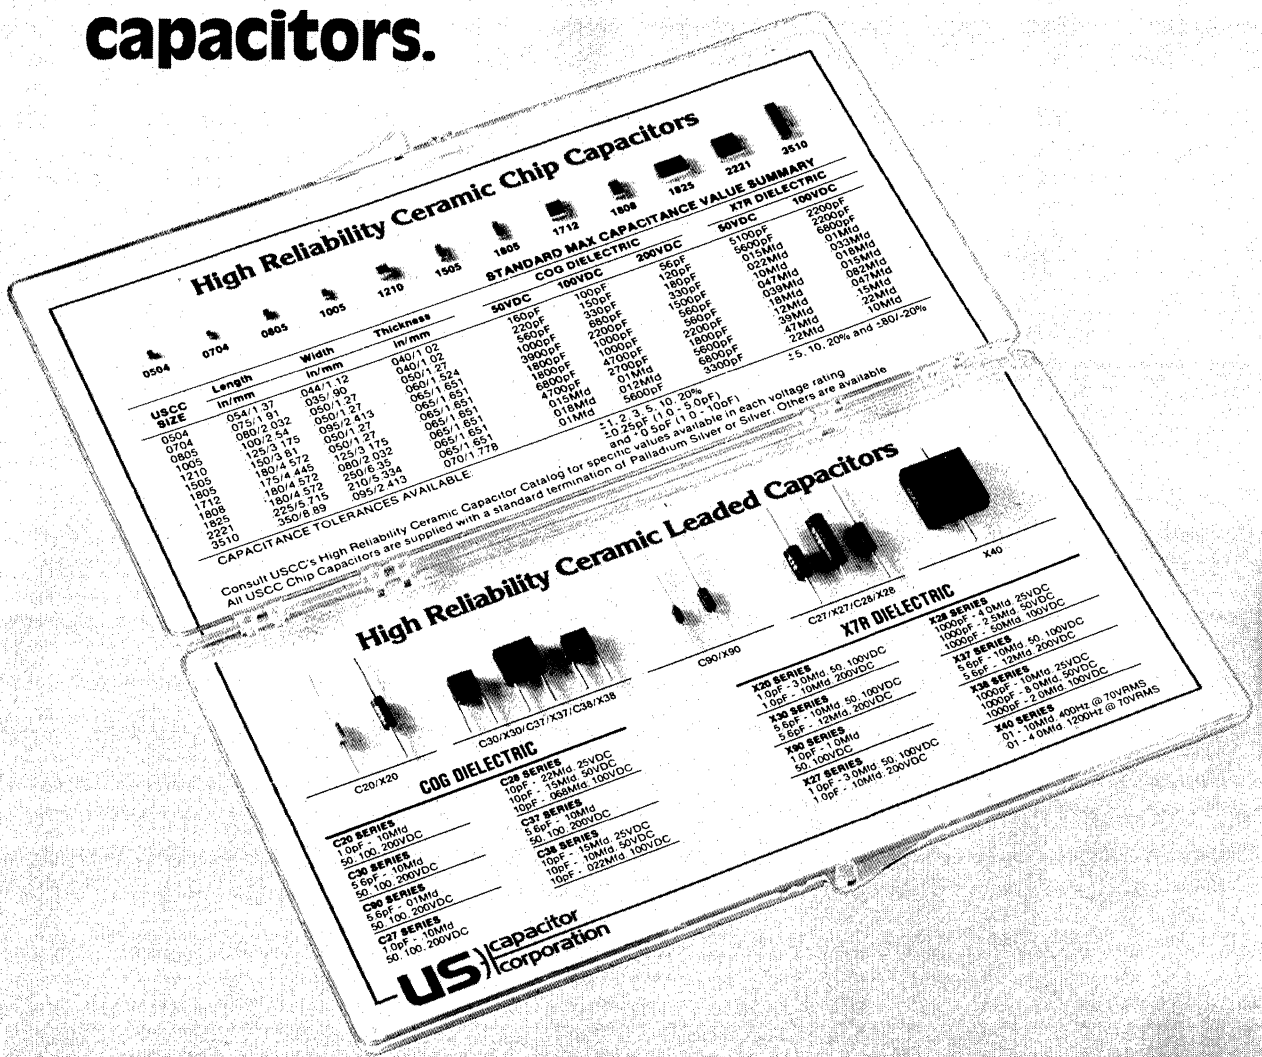
US CAPACITOR CORPORATION ... the source for hi-rel monolithic ceramic capacitors.



High reliability is our business . . . our only business. USCC monolithic ceramic chip and leaded capacitors have exceeded demanding specifications in hundreds of military, aerospace, and medical applications where hi-rel was mandatory. We have dedicated our resources to becoming the major supplier of hi-rel products to this market.

When your specifications call for high reliability monolithic ceramic capacitors, depend on US Capacitor Corporation.

Write for the US Capacitor Corporation catalog, High Reliability Monolithic Ceramic Capacitors. It's FREE, and contains complete specifications on radial and axial leaded and chip styles.

UNITED CHEMI-CON...

Your first choice among the world's leading suppliers of aluminum electrolytic capacitors.

Your first choice for...

A wide range of products

- ☐ Reduced case sizes
- ☐ Low leakage current
- ☐ Extended operating temperature range
- ☐ Extended voltage and capacitance values

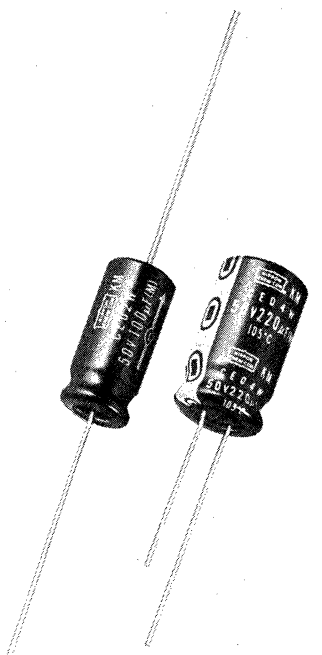
Service

- ☐ Local representation and inventory
  See Directory Section
- ☐ Large distribution network
  See Directory Section
- ☐ Design engineering support

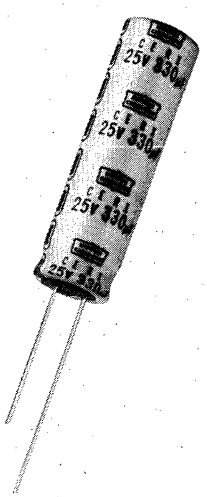
Quality

- ☐ All products are 100% tested
- ☐ All products are date coded
- ☐ All products are lot traceable

SM Series
Very high quality general purpose



KM Series
Low leakage current, extended temperature range, reduced case size



RX Series
Low leakage, high ripple current, ideal for power supply output use

SRA Series
Ultra-miniature case size (4 x 7mm) general purpose

NMHR Series
Long life, reduced case size, high ripple current, ideal for power supply input use

United Chemi-Con Series of Capacitors

United Chemi-Con manufactures capacitors in a wide variety of materials, sizes and termination styles. The table below provides a quick cross reference of the various types and their characteristics. Complete technical data is available. United Chemi-Con...since 1931, known the world over for capacitor leadership.

Series	Capacitance Range in µF	Voltage Range in Volts	Temperature Range	Leakage Current in µA	Standard Capacitance Tolerance	Minimum Case Size (mm)	Lead Configuration
SL	.47 to 3300 .47 to 10,000	6.3 to 450 6.3 to 500	−40 to +85°C	.03 CV	−10 to +50%	5 x 11 5 x 13	Radial Axial
SM	.47 to 10,000 .47 to 10,000	6.3 to 450	−40 to +85°C	.01 CV or .03 CV+15µA	±20%	5 x 11 5 x 12.5	Radial Axial

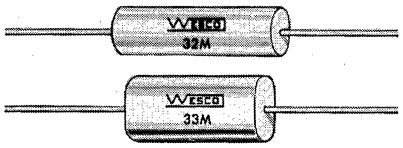
WESCO® MYLAR* FILM-FOIL CAPACITORS



SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE

200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

TEMPERATURE RANGE

−55°C to +85°C with full rated voltage applied. To +125°C with 50% of rated voltage.

INSULATION RESISTANCE

At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 100,000 megohms-microfarads, but need not exceed 100,000 megohms.

DISSIPATION FACTOR

Shall not exceed 0.75% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE

Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz ±20 Hz.

LIFE TEST

Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

CAPACITANCE STABILITY (DRIFT)

Less than 0.50% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 80°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE

Meets requirements of Mil-C-27287,, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST

Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

FEATURES

Wrap and fill construction.

Tubular or oval configuration for optimum space savings.

Extended foil design.

Quality control procedures per Mil-Q-9858.

Will meet or exceed Mil-C-27287.

APPLICATIONS

Computers

Data Processing Equipment

Peripheral Equipment

Aircraft and Missile Systems

Industrial Instrumentation

Navigation and Distance Measuring Equipment

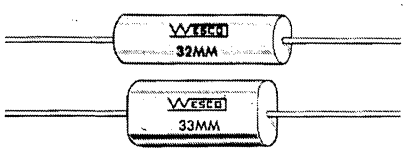
WESCO® METALIZED MYLAR* CAPACITORS



ULTRA MINIATURE
35 VDC AND 50 VDC RATINGS

SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE
200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

TEMPERATURE RANGE
−55°C to +85°C with full rated voltage applied. To +125°C with 50% of rated volatge.

INSULATION RESISTANCE
At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 30,000 megohms-microfarads, but need not exceed 30,000 megohms.

DISSIPATION FACTOR
Shall not exceed 1.0% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE
Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz ±20 Hz.

LIFE TEST
Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

CAPACITANCE STABILITY (DRIFT)
Less than 0.3% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 85°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100. yields the stability expressed in percent.

HUMIDITY RESISTANCE
Meets requirements of Mil-C-27287, Para. 3.12 when tested in accordance with Mil-STD-202, Method 103 B, Condition B.

LEAD PULL AND BEND TEST
Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

FEATURES
Wrap and fill construction
Tubular and oval configuration for optimum space savings
Extended foil design
Miniature size — lightweight
Low dissipation factor
Excellent stability
Quality control procedures per Mil-Q-9858

APPLICATIONS
Data Processing Equipment
Aircraft and Missile Systems
Industrial Instrumentation
Navigation and Distance Measuring Equipment
Communications Equipment
Tachometers
Filters
Peripheral Equipment

STANDARD LEAD SIZES FOR 32MM: #24 AWG TCW: up to and including .203″ Dia.
#22 AWG TCW: From .204″ thru .312″ Dia.
#20 AWG TCW: .313″ Dia. and over

STANDARD LEAD SIZES FOR 33MM: Refer to equivalent rating in Type 32MM

CAPACITY TOLERANCE: STANDARD ±10%/OTHER . . . FROM ±20% TO ±2%. OTHER VALUES AS WELL AS VOLTAGE RATINGS ARE AVAILABLE ON REQUEST.

* DuPont Registered Trademark.

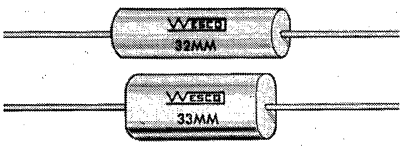
WESCO®

WESCO® METALIZED MYLAR* CAPACITORS



SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE

200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

TEMPERATURE RANGE

−55°C to +85°C with full rated voltage applied. To +125°C with 50% of rated voltage.

INSULATION RESISTANCE

At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 30,000 megohms-microfarads, but need not exceed 30,000 megohms.

DISSIPATION FACTOR

Shall not exceed 1.0% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE

Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST

Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

CAPACITANCE STABILITY (DRIFT)

Less than 0.3% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 85°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE

Meets requirements of Mil-C-27287, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST

Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

FEATURES

Wrap and fill construction
Tubular and oval configuration for optimum space savings
Extended foil design
Miniature size — lightweight
Low dissipation factor
Excellent stability
Quality control procedures per Mil-Q-9858

APPLICATIONS

Data Processing Equipment
Aircraft and Missile Systems
Industrial Instrumentation
Navigation and Distance Measuring Equipment
Communications Equipment
Tachometers
Filters
Peripheral Equipment

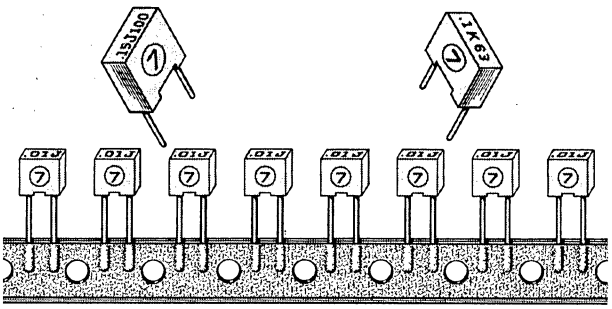
WESCO® METALIZED POLYESTER CAPACITORS "BOX" CAPACITORS



SPECIFICATIONS

TEMPERATURE RANGE
−55°C to +85°C. To +100°C with 50% voltage derating.

DIELECTRIC WITHSTANDING VOLTAGE
160% of rated voltage for 2 seconds at 25°C.

DISSIPATION FACTOR
Shall not exceed 1.0% when measured at 25°C at 1KHz ±20Hz.

CAPACITANCE TOLERANCE
Standard ±20%. ±10% and ±5% available upon request. Measurements will be made at 25°C and 1KHz ±20Hz.

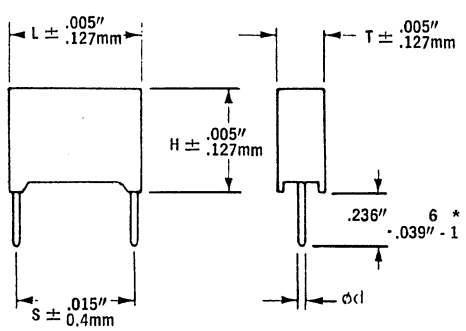
LIFE TEST
Shall withstand 125% of rated voltage at 85°C for 1000 hours.

HUMIDITY RESISTANCE
Meets requirements of MIL-STD-202, Method 103B, condition B.

TERMINALS
Tinned solid copper wire.

MARKING
Capacitance, tolerance, voltage (VDC), WESCO trademark (7).
(Exception: Certain values due to size limitation, will display capacitance, tolerance and (7) only.)
Tolerance Codings: M = ±20%, K = ±10%, J = ±5%.

RESISTANCE TO SOLDERING HEAT
During soldering operation, maximum heat of +260°C may be applied to leads for no longer than 6 seconds.



* Except for type 68MM which is: 0.157" ± .04" 4mm + 1

WESCO® POLYSTYRENE CAPACITORS

SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE
200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

INSULATION RESISTANCE
At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 500,000 megohms-microfarads, but need not exceed 500,000 megohms.

DISSIPATION FACTOR
Shall not exceed .05% when measured at 25°C and 1000 Hz, ± Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE
Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST
Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

TEMPERATURE COEFFICIENT
Capacitance shall change linearly over operating temperature range at rate of −105, ±30 parts per million/°C.

CAPACITANCE STABILITY (DRIFT)
Less than .05% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 85°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE
Meets requirements of Mil-C-27287, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST
Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

TEMPERATURE RANGE
−55°C to +85°C with full rated voltage applied.

METALIZED POLYCARBONATE CAPACITORS

SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE
200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

TEMPERATURE RANGE
−55°C to +85°C with full rated voltage applied. To +125°C with 50% of rated voltage.

INSULATION RESISTANCE
At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 50,000 megohms-microfarads, but need not exceed 50,000 megohms.

DISSIPATION FACTOR
Shall not exceed 0.3% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE
Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST
Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

CAPACITANCE STABILITY (DRIFT)
Less than 0.3% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 85°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE
Meets requirements of Mil-C-27287, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103B, Condition B.

LEAD PULL AND BEND TEST
Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90 ° in the opposite direction with no evidence of breakage.

METALIZED POLYPROPYLENE CAPACITORS

SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE
200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

INSULATION RESISTANCE
At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 100,000 megohms-microfarads, but need not exceed 100,000 megohms.

DISSIPATION FACTOR
Shall not exceed 0.1% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE
Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST
Shall withstand 140% of rated voltage at 105°C for 250 hours. One failure in twelve shall be permitted.

TEMPERATURE COEFFICIENT
Capacitance shall change linearly over operating temperature range of −55°C to +85°C at rate of −290, ±75 parts per million/°C.

CAPACITANCE STABILITY (DRIFT)
Less than .2% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 105°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in precent.

HUMIDITY RESISTANCE
Meets requirements of Mil-C-27287, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST
Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

TEMPERATURE RANGE
−55°C to +105°C with full rated voltage applied.

DIELECTRIC ABSORPTION
Shall not exceed .05% when tested in accordance with Mil-C-19978.

STANDARD LEAD SIZES: #24 AWG: up to and including .203″ Dia.
#22 AWG: from .204″ thru .312″ Dia.
#20 AWG: .313″ Dia. and over

STANDARD LEAD MATERIAL: SOLID TINNED COPPER WIRE.

CAPACITY STANDARD: STANDARD . . . ±5%/OTHER . . . FROM ±20% TO ±1%.

OTHER VALUES AS WELL AS VOLTAGE RATINGS ARE AVAILABLE UPON REQUEST.

LIMITED WARRANTY

Seller warrants the products sold shall conform to specifications and be free from defects in material and workmanship furnished by Seller, which develop under normal and intended use. The **sole liability** of Seller, whether based upon breach of warranty or contract or negligence, shall be limited to repair or replacement, at Seller's election, of all such defective or nonconforming products, upon return f.o.b. to Seller's factory, provided Buyer has given Seller notice in writing of such defect or nonconformity within ninety days after delivery by Seller of such items to Buyer.

Seller assumes no liability for 1) incidental, collateral or consequential damages; 2) applications in combination with any electrical or electronic components other than as intended by Seller; 3) damages of any kind incurred by Buyer from modifications made to the products without written consent of Seller.

The foregoing constitutes the sole and exclusive remedy of Buyer and the exclusive liability of Seller and IS IN LIEU OF ANY AND ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, AS TO MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, DESCRIPTION, QUALITY OR PRODUCTIVENESS.

WESCO® POLYPROPYLENE CAPACITORS

SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE
200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

INSULATION RESISTANCE
At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 250,000 megohms-microfarads, but need not exceed 250,000 megohms.

DISSIPATION FACTOR
Shall not exceed .05% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE
Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST
Shall withstand 140% of rated voltage at 105°C for 250 hours. One failure in twelve shall be permitted.

TEMPERATURE COEFFICIENT
Capacitance shall change linearly over operating temperature range of −55°C to +85°C at rate of −290, ±75 parts per million/°C.

CAPACITANCE STABILITY (DRIFT)
Less than .2% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 105°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE
Meets requirements of Mil-C-27287, Para 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST
Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

TEMPERATURE RANGE
−55°C to +105°C with full rated voltage applied.

FEATURES

32P
- Wrap and fill construction
- Excellent long-term stability
- Superior "Q" for tuned circuits
- High insulation resistance
- Linear temperature coefficient
- Quality control procedures per Mil-Q-9858
- Extended foil design

32MPC
- Wrap and fill construction
- Micro-miniature — lightweight
- Low dissipation factor
- Zero TC ±50 ppm/°C from +25°C to +55°C
- Extended foil design
- Excellent stability
- Quality control procedures per Mil-Q-9858

32PL & 32MPL
- Wrap and fill construction
- Excellent long-term stability
- Superior "Q" for tuned circuits
- High insulation resistance
- Linear temperature coefficient (−55°C to +85°C)
- Quality control procedures per Mil-Q-9858
- Extended foil design

APPLICATIONS

32P, 32PL & 32MPL
- Computers
- Data Processing Equipment
- Aircraft and Missile Systems
- Industrial Instrumentation
- Navigation and Distance Measuring Equipment
- Communications Equipment
- Timing and Retrace Circuits
- Integrating Networks
- High "Q" Low Loss Filters
- Peripheral Equipment

32MPC
- Data Processing Equipment
- Aircraft and Missile Systems
- Industrial Instrumentation
- Navigation and Distance Measuring Equipment
- Communications Equipment
- Tachometers
- Filters
- Peripheral Equipment

EXPLANATION OF CATALOG NUMBER

32 M 1002 K-1

32 Round, Wrap and Fill, with epoxy seals.

M Mylar-Foil, Axial Leads*

1002 In Picofarads — first three digits are significant. Last digit specifies number of zeros, i.e., 1002 = 10,000 pfd. or 0.01 mfd.

K Capacity Tolerance:
K = ±10% H = ±3% F = ±1%
M = ±20% J = ±5% G = ±2%

1 DC Voltage Rating:
05 = 50 VDC 2 = 200 VDC 6 = 600 VDC
1 = 100 VDC 4 = 400 VDC etc.

***** For Radial Leads, add letter "R" at end of part number.

MINIGLOSSARY CAPACITORS

Anode: One of two plates or conductors. In polarized capacitors, the anode should be connected to the positive conductor in the circuit.

Capacitive Reactance: The measure of the opposition of a capacitor to accepting a charge and expressed in ohms. When direct current is applied under stated conditions capacitive reactance becomes a constant but, when alternating current is applied the capacitive reactance varies until an equilibrium is achieved and the capacitor appears to have only direct current present. This condition is commonly used in filter applications or in coupling circuits.

Cathode: One of two plates or conductors. In electrostatic capacitors the cathode is metallic. In electrolytic capacitors the cathode is a liquid, gel or other conductive material which is in intimate contact with a metallic cathodic connection.

Dielectric Constant: The measure of quality of the insulating materials in a capacitor. Dry air has a dielectric constant of one (1). Aluminum oxide used in aluminum electrolytic capacitors has a nominal dielectric constant of ten (10).

Electrolytic: A capacitor with one metallic conductor (generally the anode) and with a liquid or semiconductor cathode. Nonpolarized electrolytic capacitors generally have two equal anodes as well as the liquid cathode. These anodes operate alternately as anode and cathodic connection as alternating current is applied.

Electrostatic: One of two general classes of capacitors in which two or more discrete metallic conductors are present and separated by an insulating dielectric material. Examples include: mica, ceramic, film, and paper types.

Farad: The basic unit of measure in capacitors. A capacitor charged to one volt with a charge of one coulomb (one ampere flowing for one second) has a capacitance of one farad. Capacitors are generally rated at portions of a farad (microfarads or picofarads).

1 farad (F) = 1,000,000 microfarads (μF) 1 microfarad (μF) = 1,000,000 picofarads (pF)

Impedance: All capacitors exhibit impedance. It is a function of capacitor type and internal construction. This can be particularly important in certain applications such as filters for switching power supplies. Capacitors used in these applications often have special multiple tab construction to shorten current paths and to reduce internal resistance.

Leakage Current: Expressed as dcl for electrolytic capacitors, a measure of the intrinsic losses in a charged capacitor. Generally speaking, the lower the dcl, the higher quality the capacitor.

Power Factor: A measure of the overall efficiency of a capacitor. Power factor ratings take all internal losses into consideration in a complex formula. This parameter of certain capacitors is often very important in AC applications such as motor-start and/or motor-run capacitors.

Rated Voltage: The rated working voltage of a capacitor. Generally expressed in DC Volts (Vdcw). This is the voltage at which a capacitor may be safely operated at 25°C continuously within its overall parameters.

Ripple Current: The total amount of alternating and direct current that may be applied to an electrolytic capacitor under stated conditions. In general, the higher the ripple current applied, the shorter the operating life of the capacitor will be. Application of significantly higher than rated ripple currents can shorten the capacitor life dramatically and may even cause catastrophic failure (explosion).

Surge Voltage: The momentary surge voltage which may be applied for a stated length of time without doing permanent damage to the unit.

Temperature: Capacitors are generally rated at 25°C at sea level under specific humidity conditions. Operating temperature ranges are also given, along with derating (reliability) curves for operation at temperatures other than 25°C.

Temperature Coefficient: Expressed as TC in ppm (parts per million) or in percent (%) from the norm of 25°C. This is seldom a straight line and may vary widely for certain types. Most capacitors have positive TC in that the capacitance increases as temperature increases. Some types, however, have negative TC in that the capacitance decreases as temperature increases.

Ceramic Capacitor Codes

ENCAPSULATED SUBMINIATURE AND MINIATURE TOROIDAL INDUCTORS

Features

- Applications: printed circuits and modules
- Environmental: designed to meet MIL-C-15305, Grade 1, Class B (−55°C to +125°C)
- Moisture and shock resistant, immersion proof
- Powdered iron toroidal core, low external magnetic field
- Identification: part number and inductance value printed in contrasting color

General Specifications (All Series)

Maximum operating temperature: 125°C
Rated temperature rise (at 90°C): 35°C
Dielectric withstanding voltage: 700 v rms
Terminal pull: 5 pounds
Altitude rating: 70,000 feet
Overload current: 1.4 times the rated current

SERIES S, M, L MOLDED R.F. CHOKES

Series	Lengths	Diameter	Lead Size	Lead Length
S	.44 max.	.188 max.	#22 AWG	1.3 min.
M	.60 max.	.25 max.	#21 AWG	1.3 min.
L	.90 max.	.31 max.	#21 AWG	1.3 min.

Physical and Environmental Characteristics
Operating temperature −55° to +125°C
terminal strength—meets five pound pull test per MIL-C-15305
All Series meet requirements of MIL-C-15305, Grade 1, Class B

Inductance Tolerance: 0.1 to 22 uH, ±10% on Q-meter / 27 uH to 10,000, ±5% 1 kHz bridge

R.F. CHOKES J. W. MILLER DIVISION, BELL INDUSTRIES / DEPT. EM, 19070 Reyes Ave., Rancho Dominguez, CA 90221 / (213) 537-5200

SUB-MINIATURE RF CHOKES

An extremely versatile series of iron core R.F. chokes designed to meet the industries' demand for high reliability, ultra-miniature components. The coils are ideally suited to network and filter design, delay lines and computer applications. The coils are impregnated with a moisture resistant lacquer and on special order they can be fungus-proofed per JAN-T-152 using varnish per MIL-V-173A. They can also be encapsulated in epoxy resin to conform to Grade 1, Class B of MIL-C-15305. Note: L measured on 260A Q Meter except120 thru 500 mH which are measured on 1 kHz Bridge.

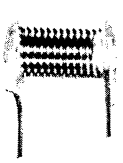
FIXED COILS

The 75F series are of Polypropylene moulded around an accurately positioned winding. Unsurpassed stability and uniformity is obtained.



Frequency range: 50 MHz to 450 MHz
Lead length: 3/16" ±1/32"
Maximum length: .38 inches
Maximum width: .23 inches

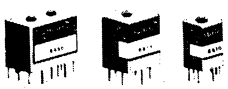
I.F. COMPONENTS SUB MINIATURE



The transformers in this series represents the state of the art, as it relates to a commercial product. In both the 455 kc. and 10.7 Mc. groups there are a complete set of I.F. transformers as well as Ratio Detector and Discriminator transformers.

Dimensions: 8849, 8850, 8851, 8805, 8806, 8807 — 25/32" x 7/16" x 1/2" high • 8852, 8853 & 8854 — 13/32" sq. x 5/8" high • 8810, 8811, 8812 & 8813 — 9/32" sq. x 15/32" high

ADJUSTABLE R.F. COILS 9100 SERIES SHIELDED

These ultra compact adjustable coils offer a good inductance range with relatively small changes in Q. Tuning is accessible from either top or bottom of the assembly. Magnetic shielding is achieved by the use of cup cores while the copper shield offers effective electro static shielding. Printed circuit terminals on base and shield.

Applications between 10 kHz and 200 MHz
Dimensions: .440" Sq. x .550" High.

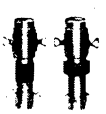
ECONOMY ADJUSTABLE R.F. CHOKES

Through the use of a recently developed Nylon molding process we are able to offer an inexpensive line of adjustable chokes. These items feature a wide inductance range which has been achieved through the use of a threaded ferrite core. They can be adjusted from either the top or bottom. This lends a degree of flexibility to your design. Mounting is achieved by means of a metal clip in a 5/16" round hole or a special keyed hole. Instructions supplied with each coil.



Dimensions: 3/8" x 1 3/8" long.

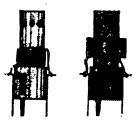
VERTICAL MOUNTED PRINTED CIRCUIT VELVETORK ADJUSTABLE RF COILS



Dimensions (form only) Over Collar 3/8" Dia. x 3/4" long.

The coil form is Polyester impregnated Alpha Cellulose tubing with internally bonded resilient ribs which provide both thread and torque control. Coils may be adjusted from either end of form.

SHIELDED SUBMINIATURE ADJUSTABLE RF COILS

Dimensions: 1/2" sq., x 5/8" high.

These compact adjustable coils offer a minimum two-to-one inductance range with relatively small changes in Q. The tuning adjustment is accessible from either the top or bottom of the coil assembly. Magnetic shielding is achieved through the use of cup cores while the metal shield offers effective electrostatic shielding. Printed circuit terminals on base and shield.

DUAL LINE FILTER CHOKES

Miller Dual Duo-Lateral Line Filter Chokes are wound with two coils on one form, giving the advantage of small physical size in cases where space requirements are stringent and two single coils would occupy too much area. Identical in specifications, except for dimensions, to our single type Duo-Lateral chokes. They are wound on white ceramic forms 2" in diameter by 4 1/2" long.

Cat. No.	Amps.	Ohms	uH	Dimensions

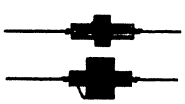
D-7829	20	.05	135	4 1/2" x 4"

SINGLE PI FERRITE CORE RF CHOKES



This series of single pi RF Chokes affords maximum Q with minimum resistance through the use of ferrite core material. The coils are impregnated in a fungus resistant lacquer. Form Dimensions .187" x 5/8".

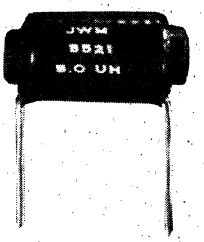
J.W. Miller 5500 & 5600
HIGH CURRENT FILTER CHOKES

Chokes are ideal for all EMI/RFI filtering applications. They are also suitable for energy storage inductors in switching power supplies.

Covered with shrink tubing and varnish impregnated.

Printed Circuit mounting.

5500 SERIES — High saturation flux density ferrite rods.



* Inductance measured @ 1 kHz with 0 Amps D.C. current.
Typical inductance change is less than 5% @ maximum rated current.

Leads: 1" long. Tinned within 1/8" of body.

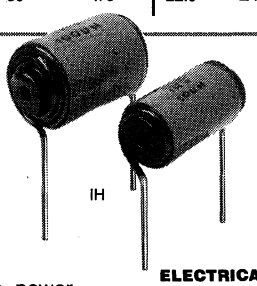
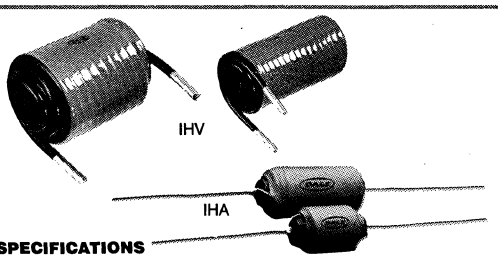
TYPE IH, IHA & IHV SERIES

High Current Filter Chokes





FEATURES

- Axial or radial leads for printed circuit mounting
- Pre-tinned leads
- Designed for noise filtering for switching regulators, power amplifiers, power supplies and SCR or Triac control circuits.

ELECTRICAL SPECIFICATIONS

Model	Ind. @ 1 KHz *±10%	Current (Max.)	DC Resistance (Max.)	Self-Resonant Frequency (Min.)
IH-3	5 μh	3 amps	.015Ω	40 MHz

DALE®

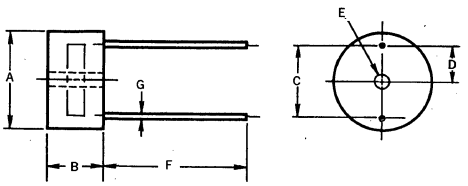
FILTER INDUCTORS, MIL-T-27
Toroidal, Encapsulated or Dipped

FEATURES

- Choice of encapsulated (TE) or dipped (TD) styles
- TE style designed to meet the requirements of MIL-T-27, Type TF5SX20ZZ. TD style combines low cost with excellent performance in commercial applications.



TE SERIES

Model No.	A Max.	B Max.	C	D	E	F Min.	G	Ind. Range
TE-2	.437 [11.10]	.270 [6.86]	.300 [7.62]	—	—	1.0 [25.40]	.020 [.51]	50 μH to 250 mH

CUSTOM INDUCTIVE PRODUCTS

TOROIDS

• Potted with case sizes to fit your specific designs • Open wound using Dale-formulated coatings for extra protection • Hermetically-sealed cans • Pulse Transformers, Inverters, RF Inductors and Transformers with or without terminal boards. Unusual shapes and sizes a specialty.

BOBBINS

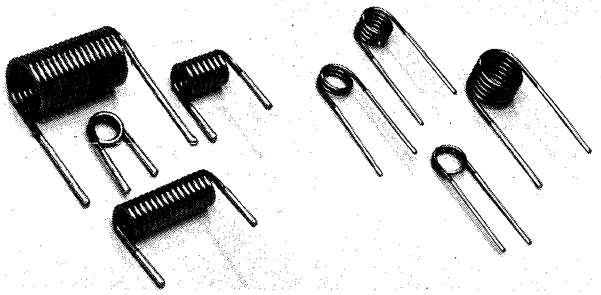
• Statistical control on high volume production items • Low initial tooling cost.

TOUGH COIL JOBS

Whether you need a hundred pieces or a million, we offer: • Complete facilities to design, engineer and produce prototype quantities • Faster turnaround on custom samples and short run production quantities • Close production coordination including cost-saving statistical control on high volume items.

AIR CORE CHOKES, INDUCTORS

Produced to your specifications for a wide range of high frequency applications including: • Television • Radio (2-way, scanners, AM/FM) • Cable TV Systems • Satellite Communication • Microwave • Test Equipment



SPECIFICATIONS

ELECTRICAL

Frequency: To 500 MHz
Current: 1 amp. max.
Temperature: To 130°C

MECHANICAL

Winding: 1 to 32 turns, clockwise or counter-clockwise with variable pitch.
Wire Gauge: #18 to #32.

Leads: Automatically tinned. Various configurations available.
Coil Inside Diameter: .079″ to .354″.
Coil Length: Up to 1.26″.

PT-10, 20 & 50
Pulse Transformers

• TRIGGER-TYPE PULSE TRANSFORMERS designed for low-cost trigger source isolation in half and full wave SCR power control circuits. P.C. and bobbin styles. • PRIMARY INDUCTANCE RANGE: 200 μH to 5,000 μH.

Delevan

COILS & INDUCTIVE COMPONENTS

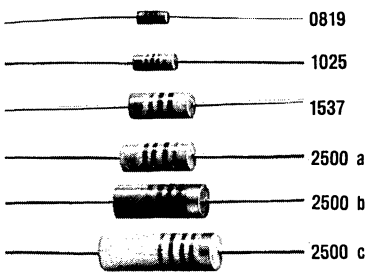
SETTING THE STANDARDS FOR OVER 30 YEARS

For over three decades, Delevan has manufactured a wide variety of inductive devices to Military and Aerospace standards of quality. This brief overview describes the basic lineup of many standard catalog items meeting rigid military or other commercial standards.

In addition to our over 800 catalog designs, Delevan manufactures a wide variety of custom magnetic components to customer specifications. Send us your requirements for a prompt quotation.

For further information call your Delevan Representative or contact the factory direct.

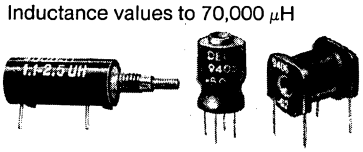
MOLDED RF COILS

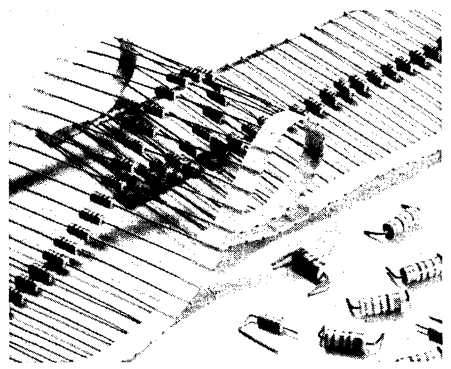


Series	Inductance Range Microhenries	Dia.		Length
0819	.10- 1,000	.078"	x	.200"
1025	.10- 1,000	.095"	x	.250"
1537	.15- 240	.156"	x	.375"
2500	270-10,000	a .190"	x	.440"
		b .215"	x	.560"
		c .240"	x	.740"

VARIABLE RF COILS

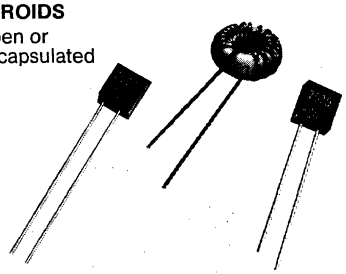
Inductance values to 70,000 μH



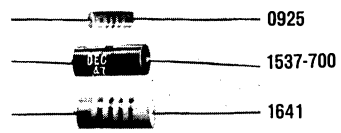


TOROIDS

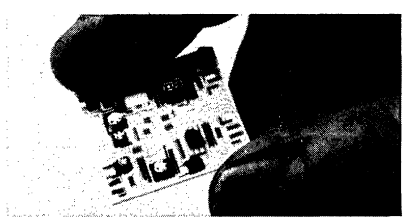
Open or encapsulated



MOLDED SHIELDED RF COILS

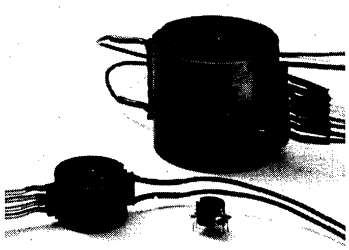


Series	Inductance Range Microhenries	Dia.		Length
0925	.10- 560	.095"	x	.250"
1537-700	.10-10,000	.156"	x	.375"
1641	.10-10,000	.162"	x	.410"



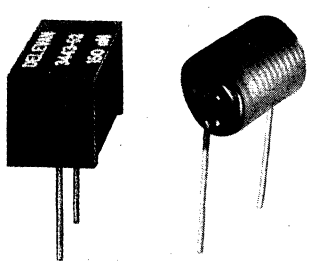
MICRO-i® CHIP INDUCTORS

- Low profile
- Ribbon leads or chip
- Gold plated or Solder coated
- Wire bondable versions
- from .010 μH to 1,000 μH



POT CORES

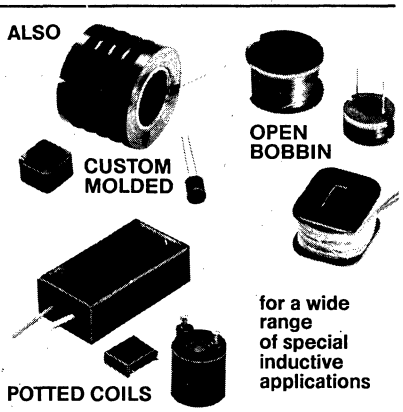
Coils & transformers in a wide range of sizes



POWER CHOKES

- for high current applications
- standard values— 1.0 μH to 15,000 μH

ALSO



for a wide range of special inductive applications

SPECIAL SERVICES

- Reel Taping
- Cut or Formed Leads
- Color Coding or Custom Marking
- Q Meter Repair or Calibration
- Environmental Testing

Write or call for application assistance.

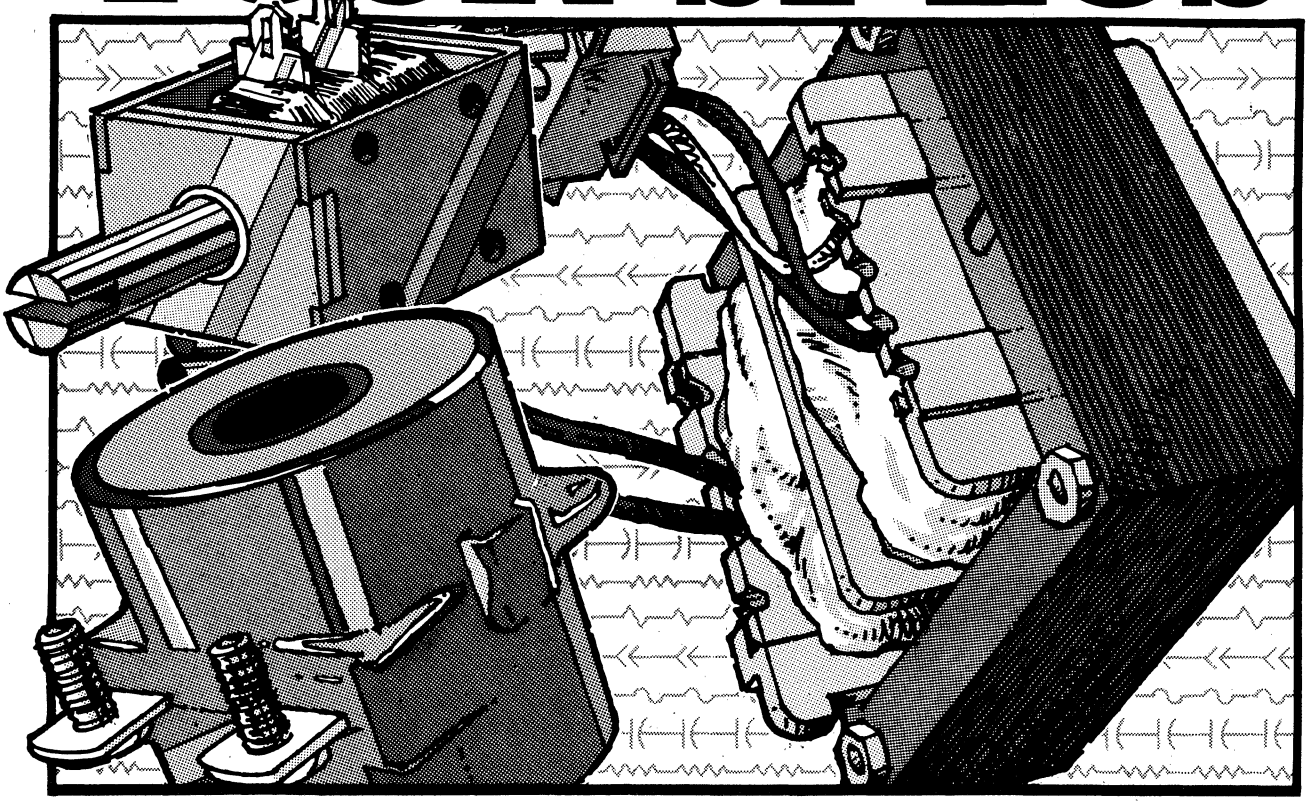
WE WANT YOUR SPECS



If you are designing a new part, modifying an existing one, making changes brought about by industry standards, or just looking for a new supplier . . . . ENDICOTT COIL should be your Source.

For over 30 years, we have successfully met the component specifications of companies marketing a diverse range of products including: Data Processing Equipment, Time Keeping Devices, Relays, Switches, Motors, Clutches, Brakes, Office Equipment, Keyboards, Control Systems and Printing Equipment - just to mention a few.

Whether you have short run or high volume needs, Endicott Coil's modern facility and experienced personnel can deliver your parts, on time and to your specifications.

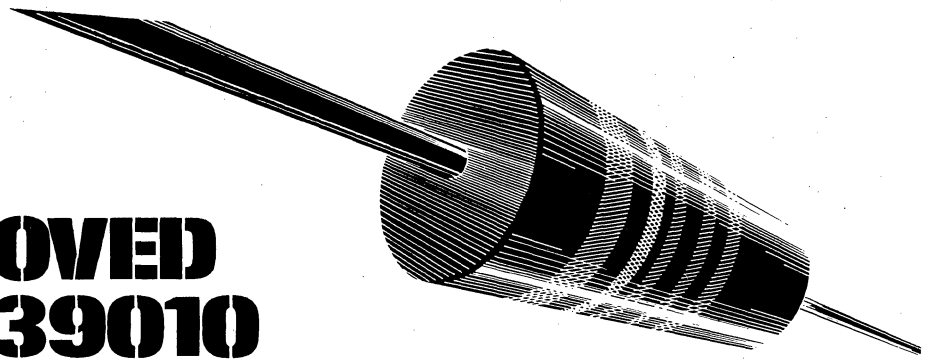
Inductors



APPROVED MIL-C-39010

LATEST REVISION

MIL-C-39010/1 - /2 - /3 FAILURE RATE "R" .01%/1000 HRS.
MIL-C-39010/4 - /5 - /6 - /7 FAILURE "R" .01%/1000 HRS.
MIL-C-39010/8 - /9 - /10 FAILURE RATE "R" .01%/1000 HRS.

Nytronics' history of technical leadership in inductors has a new chapter. The first company to extend the standard line concept to variable inductors has remained ahead in every subsequent step of refinement and miniaturization.

Today, there's a new place for a familiar group of inductors under highest reliability military specifications—MIL-C-39010 (latest revision). The unique "T" lead construction eliminates fine wire consideration that has previously concerned design engineers on critical circuitry.

With sizes ranging from the world's smallest shielded inductor to the most complex variable inductor . . . shielded, unshielded and variable, in hundreds of off-the-shelf values . . . it makes good sense to check first with Nytronics or your local distributor.

Now tested and approved to highest reliability military specifications.

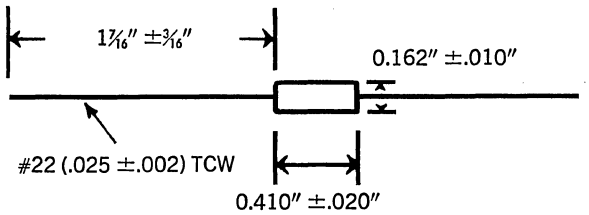
Inductors

MS-INDUCTOR SERIES 75087, 75088, 75089 MOLDED SHIELDED INDUCTOR

GRADE 1 CLASS A

Ultra-Reliable Molded Shielded Miniature Inductor.
Inductance Range: 0.1uH to 100,000uH.

The **MS-INDUCTOR SERIES** are R.F. Inductors specifically designed to meet the demanding requirements of MIL-C-15305 (latest revision). The MS-INDUCTOR Series epoxy molded envelope and shielding offers the design engineer reliability, electrical performance, and minimum coupling in high density packaging.



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% over the entire inductance range.
Dielectric Strength: 1000 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Q: Measured on a Q-Meter.
Maximum Current: Based on temperature rise not to exceed 15°C at 90°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.0076 cubic inches **Weight:** 0.75 grams maximum
Shielding: At 1000 cycles two units assembled side by side exhibit less than 3% coupling.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to +105°C.

Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), Grade 1, Class B. High frequency 10 cps to 2000 cps @ 20G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 100G, 6 MS.

Marking: Color coded per MIL-C-15305 (latest revision).

All values available in Established Reliability, Level R, to MIL-C-39010.

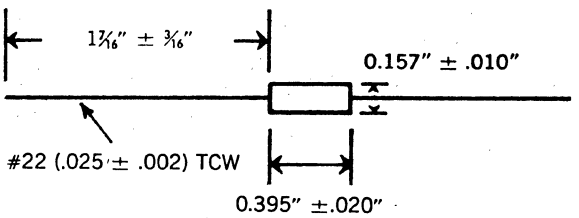
Inductors

MS-INDUCTOR SERIES
90537
MOLDED SHIELDED INDUCTOR
(Manufactured per MS-90537)

Ultra-Reliable Molded Shielded Miniature Inductor.
Inductance Range: 0.1uH to 100,000uH.

The **MS-INDUCTOR SERIES** are R.F. Inductors specifically designed to meet the demanding requirements of MIL-C-15305 (latest revision). The MS-INDUCTOR Series epoxy molded envelope and shielding offers the design engineer reliability, electrical performance, and minimum coupling in high density packaging.



GRADE 1 CLASS B

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% over the entire inductance range.
Dielectric Strength: 700 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Q: Measured on Q-Meter.
Maximum Current: Based on temperature rise not to exceed 35°C at 90°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.0076 cubic inches **Weight:** 0.75 grams maximum
Shielding: At 1000 cycles two units assembled side by side exhibit less than 3% coupling.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C.

Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305D, Grade 1, Class B. High frequency 10 cps to 2000 cps @ 20G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 100G, 6 MS.

Marking: Color coded per MIL-C-15305 (latest revision).

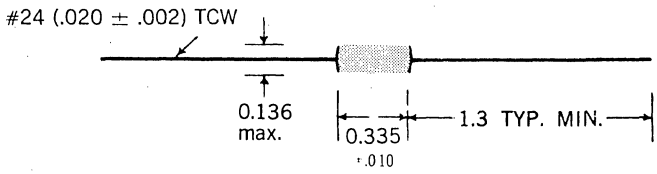
Inductors

SUPER WEE-WEE-DUCTOR

An Ultra-Reliable molded shielded inductor. Subminiature size for high density circuits. Great Inductance-to-size ratio. .10 uH to 10,000 uH. 0.136" diameter x 0.335" length. 61 stock values.

The **SUPER WEE-WEE-DUCTOR,** a shielded miniaturized inductor, provides a greater inductance-to-size ratio in a molded epoxy envelope. Use of unique "T" lead construction on all values from 15 uH to 10,000 uH assures exceptional reliability in ranges where fine wire sizes are used. This MS inductor series is designed to meet the stringent requirements of MIL-C-15305 (latest revision). This provides the design engineer with utmost reliability, electrical performance, and minimum coupling in high density packaging.



GRADE 1 CLASS A

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% (Q-Meter).
Dielectric Strength: 700 volts RMS at sea level.
Self-Resonant Frequency: Measured with full length leads on Q-Meter.
Q: Measured on Q-Meter.
Rating: maximum based on ⅓ watt dissipation.

DENSITY CHARACTERISTICS

Volume: 0.0041 cubic inches.
Weight: 0.50 grams maximum.
Shielding: Less than 3% coupling with two units mounted side by side at 1000 cycles.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to +105°C.
Terminal Strength: Meets five pounds pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).
Moisture, Vibration and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision). High Frequency: 10 cps to 2000 cps @ 20G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes.
Shock: 100G, 6 MS.
Marking: Color coded per MIL-C-15305 (latest revision).

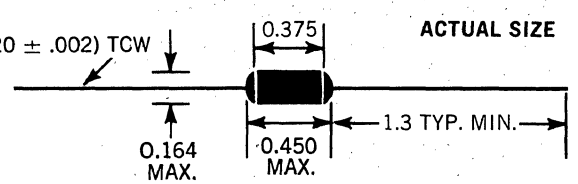
Inductors

WEE-DUCTOR

**Miniature Shielded Inductor with high inductance-to-size ratio.
0.10uH to 180,000uH in 76 values
Designed to meet MIL-C-15305B.**

The **WEE-DUCTOR** was the first miniature shielded inductor that Nytronics standardized for stock delivery. This encapsulated non-flammable shielded unit in a 0.164" diameter by 0.450" long envelope offers the design engineer extremely high inductance for density packaging. The WEE-DUCTOR is designed to meet the environmental requirements of MIL-C-15305 Rev. B. **GRADE 2 CLASS B**



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.1 to 22uH ±10% (Q-Meter); 27uH to 1,000 ±5% (1KC Bridge); 1,200uH to 56,000uH ±10% (1KC Bridge) 68,000uH to 180,000uH ±20% (1KC Bridge) measured at point on leads ¼ inch from body.

Dielectric Strength: 700 volts RMS at sea level.

Self-Resonant Frequency: Minimum f_o to be not less than 80% of published data, and measured with full length leads on Q-Meter.

Q: Measured on Q-Meter.

Maximum Current: Based on temperature rise not to exceed 40°C at 85°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.0087 cubic inches **Weight:** 0.75 grams maximum
Shielding: Less than 3% coupling with two units measured side by side at 1000 cycles.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C.
Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305B.
Marking: Printed with pertinent data.

Note: L & Q are not always tested at the same frequency.

Inductors

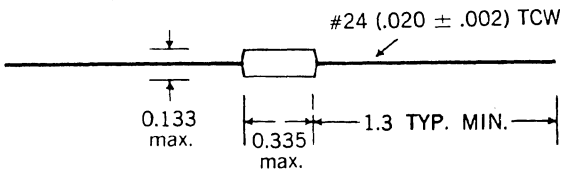
WEE-WEE-DUCTOR SERIES

The smallest shielded inductor for high density circuits 0.10 to 1,000 uh 0.133" diameter x 0.335" length. We have 49 stock values.

GRADE 2 CLASS B

The **WEE-WEE-DUCTOR** offers the Design Engineer a subminiature shielded inductor to solve special problems in density circuit application. This shielded inductor has great inductance-to-size ratio and is designed to meet the stringent requirements of MIL-C-15305 Rev. B.

0.10 to 10,000uH
0.133" diameter x 0.335" length
49 stock values



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% (Q-Meter).

Dielectric Strength: 700 volts RMS at sea level.

Self-Resonant Frequency: Minimum f_o to be not less than 80% of published data, and measured with full length leads on Q-Meter.

Rating: I maximum based on ⅓ watt dissipation.

DENSITY CHARACTERISTICS

Volume: 0.0041 cubic inches.

Weight: 0.50 grams maximum.

Shielding: Less than 3% coupling with two units mounted side by side at 1000 cycles.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to +125°C.

Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).

Marking: Color coded per MIL-C-15305 (latest revision).

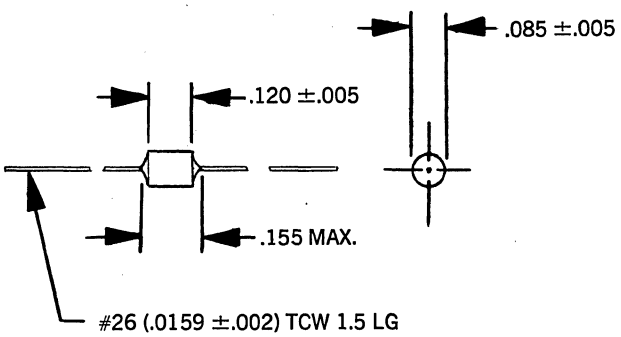
Inductors

PEE-WEE SERIES

The amazing **PEE-WEE DUCTOR** represents a 66% size reduction from the smallest magnetically shielded axial leaded inductor series heretofore available anywhere. Furthermore, this size reduction was obtained with negligible loss of electrical performance by employing several unique concepts in RF coil design.



ALL DIMENSIONS IN INCHES

ELECTRICAL CHARACTERISTICS:

Inductance Tolerance: ± 10% (Std).

L,Q,F, values: Measurements per MIL-C-15305. (latest revision).

Incremental Current: Incremental current in table is for 5% reduction in inductance value.

Dielectric Strength: 300 Volts RMS @ Sea Level.

*SRF minimum not less than 80% of specified values.

DENSITY CHARACTERISTICS:

Volume: .0007 Cubic Inches

Weight: 0.12 Grams

Shielding: 5% maximum coupling for two units side by side.

Marking: EIA color coded

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS:

Terminal pull: 3 lbs. minimum.

Environmental: Grade 2 Class A

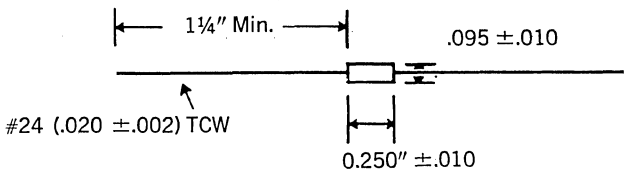
Inductors

DECI-DUCTOR

New Subminiature Inductor 0.10uH to 1000uH Range
0.100″ diameter by 0.250″ length 49 STANDARD VALUES

The **DECI-DUCTOR** offers the design engineer epoxy-molded reliability and uniformity in a subminiature R.F. Inductor. This Nytronics R.F. Inductor line is designed to meet all the environmental specifications of MIL-C-15305 (latest revision).



GRADE 2 CLASS B

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% over entire range.
Dielectric Strength: 700 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Rating: Maximum Current based on 35°C rise in 90°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.002 cubic inches **Weight:** 0.35 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C

Terminal Strength: Meets three pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), 10 cps to 2000 cps @ 15 G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 50G, 11 MS (body mounted).

Marking: Color coded per MIL-C-15305 (latest revision).

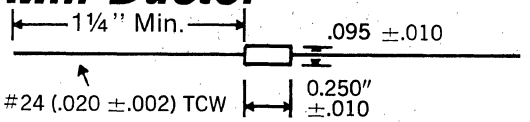
Markings: Color coded per MIL-C-15305 (Latest Rev.)

The MS Inductor Series are RF Inductors specifically designed to meet the demanding requirements of MIL-C-15305 (latest revision). This MS Series is Epoxy Molded enveloped features reliability and uniformity in a Subminiature Inductor.

Mili-Ductor



ELECTRICAL CHARACTERISTICS
Inductance Tolerance: ±10% over entire range.
Dielectric Strength: 1000 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Rating: Maximum current based on; 35°C rise in 90° ambient for phenolic, 15°C rise in 90° ambient for iron, 35°C rise in 70° ambient for ferrite core inductors.

DENSITY CHARACTERISTICS
Volume: 0.002 cubic inches; **Weight:** 0.30 grams.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS
Operating Temperature: —55°C to +125°C phenolic core, —55°C to +105°C iron and ferrite core.
Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).
Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), 10 cps to 2000 cps @ 20G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 100G, 6 MS (body mounted).

* NCG Part No. electricals and tolerances as shown, MS No. electricals and tolerances per actual MS sheet.

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.15 to 33 uH ±10%
36 to 240 uH ±5%
Measured on Q meter per MIL-C-15305 (latest revision).

Dielectric Strength: 1000 volts RMS @ sea level

Rated Current: Based on max. temp. rise of
35°C (ambient 90°C) for
RFC-SS-0.15 to 4.7
15°C (ambient 90°C) for
RFC-SS-5.6 to -240

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: Max. 125°C for
RFC-SS-0.15 to -4.7
Max. 105°C for
RFC-SS-5.6 to -240

Terminal Strength: Meets five pound pull test per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), high frequency 10 cps

Marking: Color banded.

Nytronics Components Group, Inc.
ORANGE STREET, DARLINGTON, S. C. 29532
(803) 393-5421 — TWX 810-665-2182

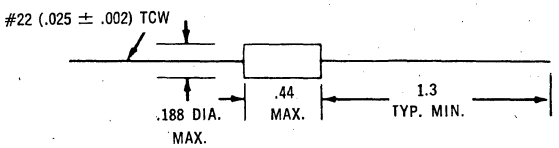
Inductors

RFC-S SERIES

Proven reliability molded inductors specifically designed to meet MIL-C-15305 (latest revision). Inductance 0.1 to 1000uH.

GRADE 1 CLASS B

ACTUAL SIZE



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.1 to 22uH ±10% on Q-Meter
27uH to 100 ±5%
1,000 cps bridge
120uH to 1000uH ±5% on Q-Meter

Dielectric Strength: 700 volts RMS at sea level.

Self-Resonant Frequency: Minimum f_o to be not less than 80% of published data and measured with full length leads on Grid-Dip Meter.

Q: Measured on Q-Meter.

Rating: ⅓ watt dissipation for series S

Note: L & Q are not always tested at the same frequency.

DENSITY CHARACTERISTICS

Volume: 0.012 cu. in.

Weight: 0.90 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to +125°C.

Terminal Strength: Meets five pound pull test per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 Grade 1, Class B. High frequency 10 cps to 2000 cps @ 30G ±10% maximum for 12 logarithmic swings, each of 20 minute duration repeated for each of three mutually perpendicular planes. (body mounted)

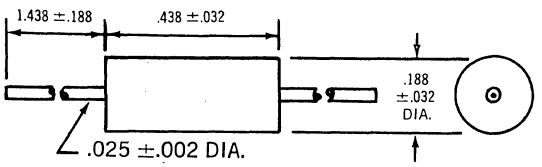
Inductors

MS-INDUCTOR SERIES
75008-75101-90539
MOLDED INDUCTOR



ALL DIMENSIONS IN INCHES

Proven reliability molded inductors designed to meet MIL-C-15305 (latest revision).
Inductance 0.15 to 1000 uh.

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.15 to 0.47 uh ±20%; 0.56-27 uh ±10%; 270-1000 uH ±5%.
Dielectric Strength: 1000 Volts RMS at sea level
Max. Temp. Rise: 35°C

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C.
Terminal Strength: Meets five pound pull test per MIL-C-15305 (latest revision).
Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision). High frequency 10 cps to 2000 cps @ 20G ±10% maximum for 12 logarithmic swings, each of 20 minute duration repeated for each of three mutually perpendicular planes. (body mounted)
Volume: S Type — 0.012 cu. in.
Weight: S Type — 0.90 grams
Marking: Color banded per MIL-C-15305 (latest revision).

Inductors

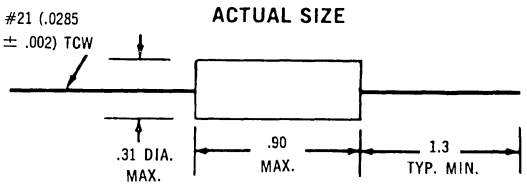
RFC-L SERIES

Proven reliability molded inductors specifically designed to meet MIL-C-15305 (latest revision). Inductance 1.0 to 10,000uH.

GRADE 1 CLASS B



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.1 to 22uH ±10% on Q-Meter
27uH to 10,000 ±5%
1,000 cps bridge

Dielectric Strength: 700 volts RMS at sea level.

Self-Resonant Frequency: Minimum f_0 to be not less than 80% of published data and measured with full length leads on Grid-Dip Meter.

Q: Measured on Q-Meter.

Rating: ½ watt dissipation for L series.

Note: L & Q are not always tested at the same frequency.

DENSITY CHARACTERISTICS

Volume: 0.068 cu. in.

Weight: 4.10 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to +125°C.

Terminal Strength: Meets five pound pull test per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision). High frequency 10 cps to 2000 cps @ 30G ±10% maximum for 12 logarithmic swings, each of 20 minute duration repeated for each of three mutually perpendicular planes. (body mounted)

Inductors

Pee Dee Ductor Series

Marking: EIA color coded

The Pee Dee Ductor is a new, micro-miniature, axial-leaded RF inductor for hybrid circuit applications. It is significantly smaller than any unshielded inductor available anywhere. Designed to meet the requirements of MIL-C-15305 B, this reliable, high performance inductor has a standard inductance tolerance of ±10%.

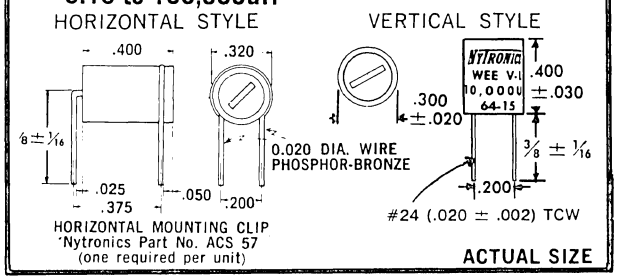
VARIABLE INDUCTORS

WEE V-L

NOW MIL APPROVED MIL-C-15305 (latest revision) — MS21381 & MS21402
Subminiature Shielded Adjustable Inductor
High Q Values
Vertical or Horizontal* Mounting
Unitized Epoxy-Molded Construction
0.400" by 0.300"
0.10 to 100,000uH



The **WEE V-L** is designed to accommodate close inductance adjustments in high-density circuits that demand exceptional stability and high "Q" in the smallest size available.
The **WEE V-L** is qualified MIL-C-15305 (latest revision). Printed board mounting is facilitated by 0.200 grid spacing and unit has shield construction to allow maximum density packaging. Standardized in 73 stock values.

ELECTRICAL CHARACTERISTICS

Adjustable Inductance Range:	±10%† over entire range as measured per MIL-C-15305 (latest revision).
Q and f_o Values:	Minimum not less than 80% of specified value at L nominal.
Dielectric Strength:	840 Volts R.M.S. at sea level.
Working Voltage:	300 Volts D.C.
Maximum Current:	Based on temperature rise not to exceed 15°C at 90°C ambient.
Incremental Current:	Defined as the DC current required to cause a five percent reduction in the nominal inductance value.

DENSITY CHARACTERISTICS

Weight:	1.5 grams maximum
Volume:	.0346 cubic inches
Shielding:	3% coupling maximum when two units are tested side by side.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Use Nytronics Tuning Tool No. B-469 or equal.

Torque:	0.75 to 6.0 inch-oz.
Operating Temperature:	−55°C to +105°C.
Moisture, Vibration, and Shock Resistance:	Meet requirements of MIL-C-15305 (latest revision).
Marking:	Manufacturer data printed.
Terminal Pull:	Three pounds.

*Turntable range on MS2138-1 thru -13 and -74 thru -85 is ±5%.

*For horizontal mounting use Nytronics mounting clip No. ACS-57 or order with prefix H (i.e. H WEE V-L 0.10).

†Tunable range ±5.0% on 0.10uH thru 1.0uH.

**NCG Part No. cannot be used as the MS number.

NOTE: Min. Q on MIL version not less than 80% of Q min. of commercial version.

NOTE: MS 21381 -74 thru -85 are available.

Nytronics Components Group, Inc.

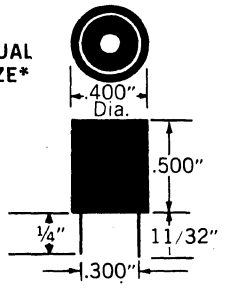
VARIABLE INDUCTORS

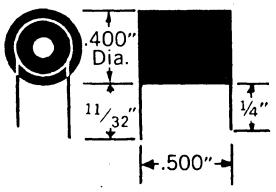
VIV-VIH

Miniature with inductance range of 0.10 to 4700uH in 29 values.
Encapsulated in epoxy resin for reliability.
Designed to meet MIL-C-15305B

ACTUAL SIZE*



ACTUAL SIZE



Terminal Leads #22 (.025 ± .002) VCW

VERTICAL STYLE HORIZONTAL STYLE

The **VARIABLE INDUCTOR** offers high reliability and exceptional stability over extreme temperature variations. This small lightweight unit is furnished in vertical and horizontal styles to facilitate mounting on printed circuit boards. The unit is designed to meet the requirements of MIL-C-15305B.

GRADE 2 CLASS B

ELECTRICAL CHARACTERISTICS

Inductance Range: 0.33 to 4700uH Tunable Range ±20%
0.15 to 0.22uH Tunable Range ±15%
0.1 Tunable Range ±10%
All measurements at 25°C on Q-Meter using miniature alligator clips mounted 1/32" from body.
Q values min. not less than 80% of specified value.

Self-Resonant Frequency: Minimum f_o to be not less than 80% of published data as measured with Grid-Dip Meter.

DENSITY CHARACTERISTICS

Volume: 0.063 cubic inches
Weight: 2.6 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Torque: 0.75 to 5.0 inch-ounces
Use Nytronics Tuning Tool No. B-305 or equal.

Operating Temperature: −55°C to +125°C

Terminal Strength: Meets five pound pull tests.

Core Material: Iron

Marking: Manufactured data printed.

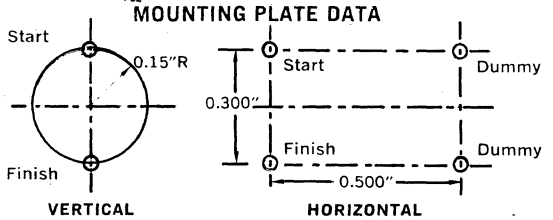
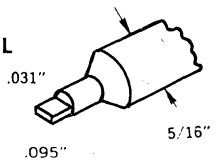
MOUNTING PLATE DATA

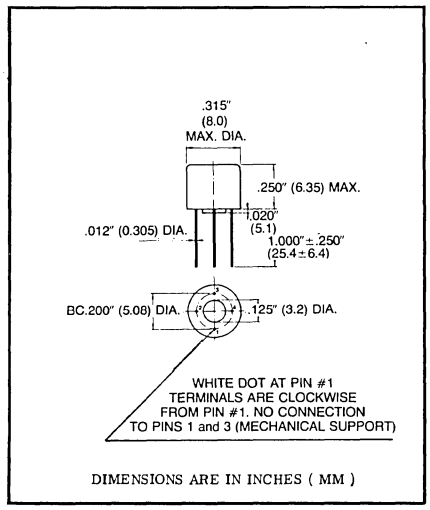


TYPICAL ALIGNING TOOL
B-305



PICO's ultra-miniature HIGH "Q" INDUCTORS

- ± 2% inductance stability vs temperature
- Smallest possible size
- Extreme resistance to thermal shock
- Meets Mil-T-27D (TF5R20ZZ)
- All units are magnetically shielded
- Non-standard inductance values available at 10% higher or lower than nearest standard inductor.



Delivery— stock to one week

"62000" SERIES

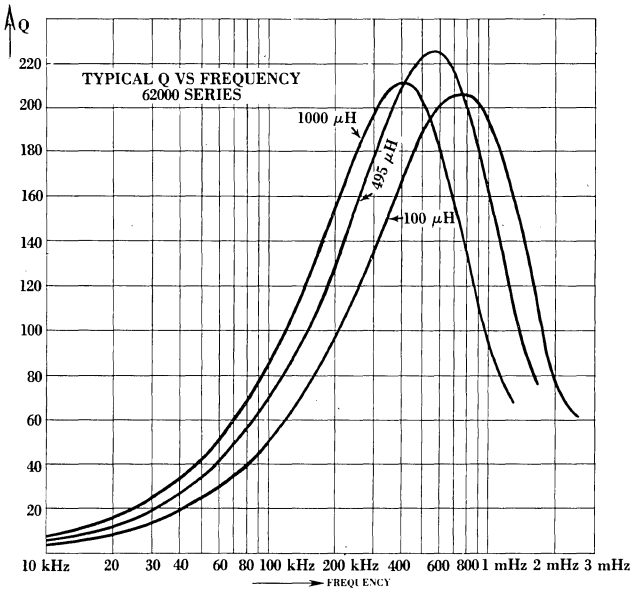
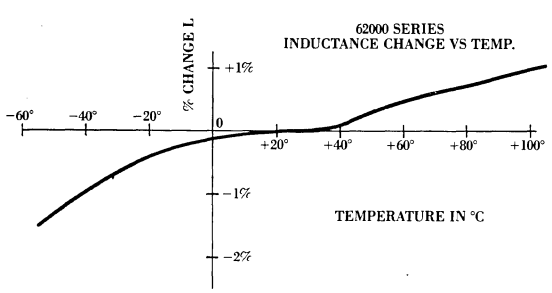
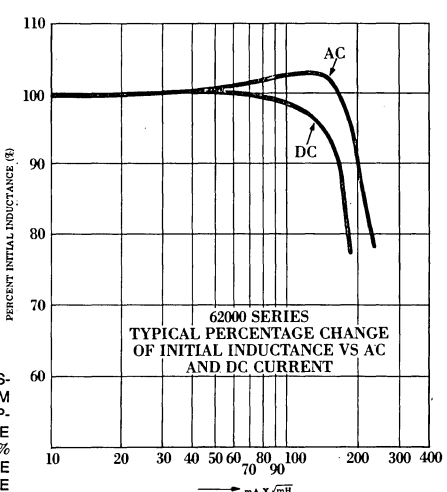
62392	100	1.2	6.8	330	150 at (500 kHz)	14.25



SPECIFICATIONS:

- INDUCTANCE TOLERANCE ±3% AT 0.1V-100KHZ
- INDUCTANCE STABILITY VS TEMPERATURE ±2% -55°C TO 105°C
- MEETS MIL-T-27D TF5R20ZZ
- WEIGHT 1 GRAM
- THERMAL SHOCK 100 CYCLES, METHOD 107D MIL-STD 202E TEST CONDITION A3
- UNIT HAS MAGNETIC SHIELD





ALL INDUCTORS ARE MEASURED AT 0 DC. THE MAXIMUM DC LISTINGS ARE FOR APPROXIMATELY 30°C HEAT RISE AND APPROXIMATELY 2% DROP IN INDUCTANCE. THE CHANGE OF INDUCTANCE WITH AC OR DC CURRENTS IS ILLUSTRATED BY THE CURVES. THE EXCITATION IS PLOTTED IN mA $\times\sqrt{mHy}$. FOR EXAMPLE THE 0.495 mH INDUCTOR (62272) WITH 170 mA DC FLOWING WILL HAVE AN EXCITATION OF mA $\times\sqrt{mHy}$ = 120, AND THE INDUCTANCE WILL DROP FROM 495 uH to 485 uH. IF THE 170 mA WAS AC, THE INDUCTANCE WOULD BE 510 uH.

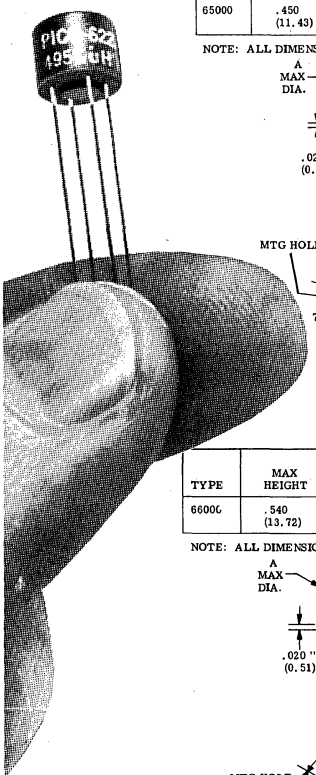
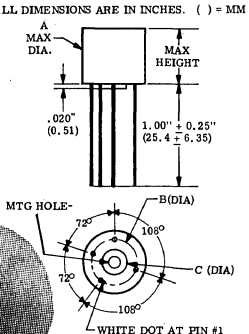
64000	.340 (8.63)	.500 (12.7)	.350 (8.89)	.250 (6.35)
65000	.450 (11.43)	.630 (16.0)	.440 (11.17)	.340 (8.64)

NOTE: ALL DIMENSIONS ARE IN INCHES. ( ) = MM

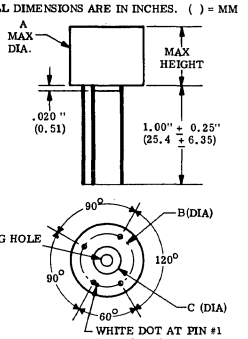




WHITE DOT AT PIN #1 TERMINALS ARE CLOCK-WISE FROM PIN #1. NO CONNECTION TO PIN #1 AND #3 (MECHANICAL SUPPORT)

TYPE	MAX HEIGHT	A MAX DIA	B BOLT CIRCLE	C STAND-OFF
66000	.540 (13.72)	.800 (20.32)	.560 (14.22)	.460 (11.68)

NOTE: ALL DIMENSIONS ARE IN INCHES. ( ) = MM



WHITE DOT AT PIN #1 TERMINALS ARE CLOCK-WISE FROM PIN #1. NO CONNECTION TO PIN #2 AND #4 (MECHANICAL SUPPORT)

ALL INDUCTORS ARE MEASURED AT 0 DC. THE MAXIMUM DC LISTINGS ARE FOR APPROXIMATELY 5% DROP IN INDUCTANCE AND NEGLIGIBLE HEAT RISE. THE CHANGE OF INDUCTANCE WITH AC OR DC CURRENTS IS ILLUSTRATED BY THE CURVES SHOWN FOR EACH INDUCTOR TYPE. THE EXCITATION IS PLOTTED IN mA X $\sqrt{mHy}$. FOR EXAMPLE THE 10 mH INDUCTOR (64314) WITH 79 mA DC FLOWING WILL HAVE AN EXCITATION OF mA X $\sqrt{mH}$ = 79 X $\sqrt{10}$ = 250 AND THE INDUCTANCE WILL DROP FROM 10 mH TO 9mH. IF THE 79 mA WAS AC THE INDUCTANCE WOULD BE 9.65 mH.

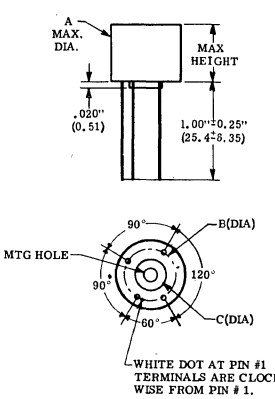
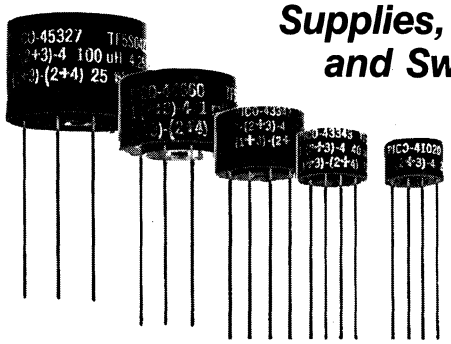
5	.635 (16.12)	.950 (24.13)	.670 (17.0)	.570 (14.48)	.140 (3.55)

NOTE: ALL DIMENSIONS ARE IN INCHES, ( ) = MM



These Inductors are ideal for Noise, Spike and Power Filtering Applications in Power Supplies, DC-DC Converters and Switching Regulators



- Minimum possible size
- Meets MIL-T-27D (TF5S04ZZ)
- Special high frequency core material to insure low losses
- All units have split windings
- Large selection of sizes available
- All units are magnetically shielded

All inductors have split windings—ratings shown in table are for series connection. Parallel connection will have ¼ inductance at twice the DC current and ¼ the DC resistance, ie. parallel connection of PICO-41020 will have 5 millihenry at .12 Amps DC with DC resistance of 13.5 Ohms

SPECIFICATIONS:

- All units meet MIL-T-27D and are type TF5S04ZZ
- Inductance measured at 0.1 VRMS-10 kHz
- Temperature rise at rated D.C. current is less than 30°C
- Maximum ambient is 100°C
- Unit has magnetic shield

PICO's EMI Common Mode Suppression Inductors

- **Minimum possible size**
- **130°C operation (Ambient + Temp. Rise)**
- **Windings Balance ± 1%**
- **Dielectric Strength .... 1500 Volts RMS**
- **All units are magnetically shielded**

These Inductors are well suited for use in Switching Regulators, DC to DC Power Supplies and all types of Electrical Equipment where the elimination of line transmitted Electromagnetic Interference is important. Electrical equipment will generate noise due to switching operations of transistors, SCR's, relays, triacs, etc. By using these Inductors, noise being fed back to the power line is minimized to an acceptable level and this noise will not interfere with other equipment operating on the same power line.

Renco's catalog of products and services is so extensive that it's impossible to reproduce them effectively on a few pages in EEM. Therefore, we urge you to contact us with your requirements. Our technical staff is eager to discuss your needs, and if we don't have a standard, off-the-shelf item to solve your problem, our independent prototype department will have a *CUSTOM* sample in your hands in ten days or less. All samples are absolutely *FREE*, of course. That's been our policy for over twenty-five years.

So, give me a call, Edward Rensing, at (516) 586-5566 and let me help you with your coil wound needs. I think you'll discover no one will service your requirements better!

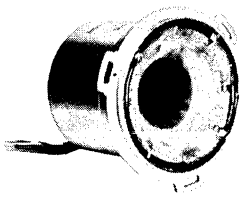
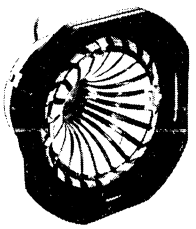
syntronic

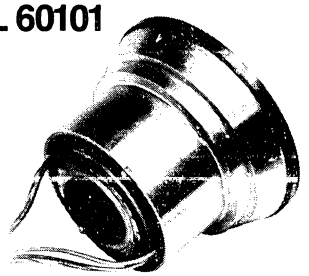
SYNTRONIC INSTRUMENTS, INC.
100 Industrial Road, Addison, IL 60101



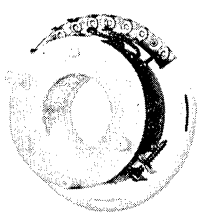
MILITARY/AIRBORNE/SHIP-BOARD YOKES
Compact, lightweight, ruggedized yokes designed to withstand the rigors of environmental stresses. Typical applications include TV raster scans, HUD, HDD, alpha-numeric, cockpit displays as well as military ground support and shipboard displays.



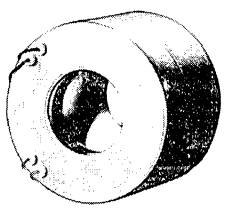
COMMERCIAL YOKES
Extensively tooled for volume production reflecting excellent cost effectiveness. Ideal for all variations of CRT terminals including alphanumeric computer output displays, medical wave-form and video. Can be supplied with built-in geometry correction and beam centering provisions.



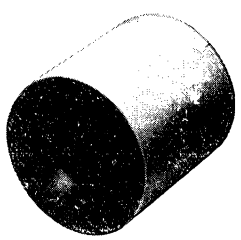
SPECIAL YOKES
Designed to solve unusual problems in unique displays such as phototypesetting, random graphics, vectors, line scan, monochrome or color projection simulators, and applications demanding accurate beam positioning, superior focus, and zero astigmatism.



Y3802 YOKE
CHARACTER WRITING
Stator Ferrite Core. High frequency yoke provides effective way to produce display characters and symbols independent of main yoke. Mounts directly behind Y38 series of yokes. Low inductances as required.



F50/55 FOCUS COILS
Static/Dynamic shielded units designed for electromagnetically focused precision displays where high resolution is required anywhere on the screen. Fits 38 mm (1½") neck diameter CRTs.



FIBER OPTIC
CRT YOKES
Precision yokes developed for phototypesetter applications provide excellent linearity and minimum spot growth center to edge of fiber optic CRT. Ten years engineering experience with phototypesetter applications.

When the electronics industry needed high quality precision components for CRT display systems, Syntronic Instruments was able to provide the technology. As a manufacturer of precision yokes, coils and related components, Syntronic enjoys a substantial share of the deflection component market and has acquired an industry-wide reputation for its quality engineering and ability to manufacture these devices in any quantity.

Quality control with such components is imperative. Syntronic engineers have designed and built much of the test equipment for these precision instruments and consistently lead in the development of new test equipment.

Today's requirements for high resolution, solid-state driven, high-speed displays require continuing effort to advance the design of deflection components. Syntronic Instruments' experienced engineering group provides such present-day technology to every application.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

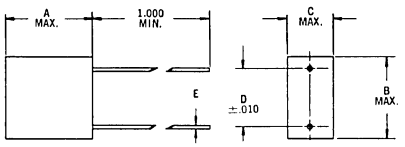
INDUCTORS

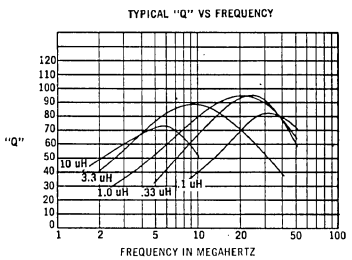
MINI-L
ENCAPSULATED RF INDUCTORS



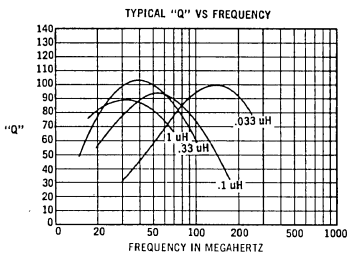
Type	A	B	C	D	E	Wt.
TA-TF	.225	.210	.110	.100	.020	.01 oz.
TB	.300	.280	.160	.200	.025	.02 oz.
TD	.390	.390	.197	.200	.025	.04 oz.

Designed to meet the requirements of MIL-C-15305, Grade 1, Class B (−55°C to +125°C). The rated temperature rise is 35°C above an ambient of 90°C. Overload current should not exceed 1.4 times the rated current. Dielectric withstanding voltage is 700 volts rms. The powdered iron cores used in these items possess excellent temperature stability and result in an inductor with low external magnetic field. This allows mounting in close proximity to each other and to other circuit components without ill effects.

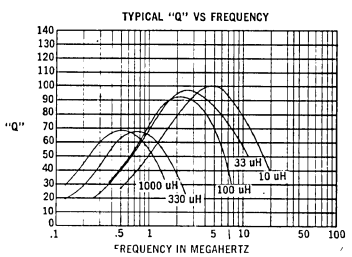
TA



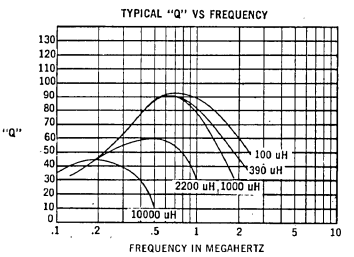
TF



TB



TD



TA SERIES

Frequency Range: 1 to 50 MHz.

Inductance Tolerances: Less than 1.0 uH, ±10%. Greater than or equal to 1.0 uH, ±5%. Closer tolerances available by special request.

Inductance TC: +50 PPM/°C maximum.

Maximum Power Dissipation: 0.2 watt.

Leads: 1 inch minimum AWG 24 tinned copper wire. Weldable gold plated Dumet leads are available.

Method of Measurement: Apparent inductance measured on HP4342A "Q" meter with leads connected ¼ inch from inductor body directly to "Q" meter terminals. Residual "Q" meter inductance of 0.01 uH should be subtracted from reading.

MIL-C-15305, Grade 1, Class B.

TB SERIES

Recommended Frequency Range: 50 KHz to 35 MHz.

Inductance Tolerance: ±5%. Closer tolerances available by special request.

Inductance TC: From +60 PPM/°C maximum to +300 PPM/°C maximum, depending upon inductance value.

Maximum Power Dissipation: .33 watt.

Leads: 1 inch minimum AWG 22 tinned copper wire. Weldable gold plated Dumet leads are available.

Method of Measurement: Apparent inductance measured on HP4342A "Q" meter with leads connected ¼ inch from inductor body directly to "Q" meter terminals. Residual "Q" meter inductance of 0.01 uH should be subtracted from reading.

Part No.	Apparent Inductance (uH)	Minimum "Q"	Test Frequency (MHz)	Minimum SRF (MHz)	Maximum DCR (ohms)	DC Current (mA)

TF SERIES

Frequency Range: 15 to 300 MHz.

Inductance Tolerances: Less than 0.1 uH, ±20%. Greater than or equal to 0.1 uH, ±10%. Closer tolerances available by special request.

Inductance TC: +200 PPM/°C maximum.

Maximum Power Dissipation: 0.2 watt.

Leads: 1 inch minimum AWG 24 tinned copper wire. Weldable gold plated Dumet leads are available.

Method of Measurement: Apparent inductance measured on Boonton 190-A "Q" meter with leads connected ¼ inch from inductor body directly to "Q" meter terminals. Residual "Q" meter inductance of 0.0026 uH should be subtracted from value calculated from C and F readings.

MIL-C-15305, Grade 1, Class B.

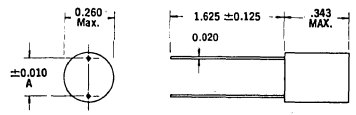
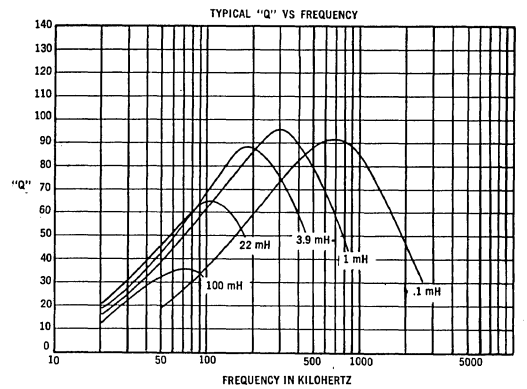
INDUCTORS

MINI-L ENCAPSULATED INDUCTORS
TE/TJ SERIES



Series	A	WT.
TE	.200	.03 oz.
TJ	.100	.03 oz.

Recommended Frequency Range: 25 KHz to 2.5 MHz.
Inductance Tolerances: ±10% @ 1 KHz.
Maximum Power Dissipation: .33 watt.
Leads: 1.625 ±.125 AWG #24 tinned copper leads. Add suffix "D" to Part Number for Weldable Gold Plated Dumet leads.
Method of Measurement: Inductance at 1 KHz measured on General Radio inductance bridge Type 1632A with leads connected directly to bridge. "Q" at test frequency, measured on HP4342A "Q" meter with leads connected directly to meter terminals.
MIL-C-15305, Grade 1, Class B.



Part Number		Inductance Ref. @ 1 KHz (mH)	Minimum "Q"	"Q" Test Frequency (KHz)	Minimum SRF (MHz)	Maximum DCR (ohms)	DC Current (mA)

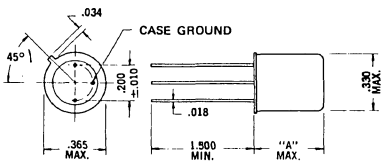
INDUCTORS

MINI-L HERMETICALLY SEALED RF INDUCTORS TG, TH SERIES



Series	A max.	Weight
TG	.390	.06 oz.
TH	.350	.07 oz.

The TG and TH series offer high "Q" inductors in a TO-5 transistor can configuration. High density packaging can be accomplished with little regard to coupling between adjacent circuitry since construction of these units results in a low external magnetic and electrostatic field.

TG SERIES

Recommended Frequency Range: 10 KHz to 500 KHz.
Inductance Tolerance: ±5%.
Inductance Stability: Less than ±2% from −20°C to +130°C.
Method of Test: Inductance is measured on a General Radio inductance bridge, Type 1632A with leads connected directly to bridge. "Q" is measured on HP4342A "Q" meter with leads connected directly to the "Q" meter terminals.
MIL-T-27, Grade 4, Class S.
Temperature Range: −55°C to +130°C.
Insulation Resistance: 10,000 Megohms minimum at 100 volts DC.
Dielectric Withstanding Voltage: 100 volts rms.

Part Number	Inductance (mH)	Inductance Test Frequency (KHz)	"Q" Minimum	"Q" Test Frequency (KHz)	Maximum DCR (ohms)	Minimum SRF (KHz)	DC Current (mA)

TH SERIES

Recommended Frequency Range: 100 KHz to 10 MHz.
Inductance Tolerances: 10 uH through 33 uH, ±10%, 39 uH through 130 uH, ±5%, greater than and including 150 uH, ±3%.
Inductance Stability: Less than or equal to ±2% from −20°C to +85°C.
Method of Test: Inductance and "Q" are measured on HP4342A "Q" meter with leads connected directly to the "Q" meter terminals.
MIL-C-15305, Grade 1, Class C.
Temperature Range: −55°C to +130°C.
Insulation Resistance: 10,000 Megohms minimum at 100 volts DC.
Dielectric Withstanding Voltage: 100 volts rms.

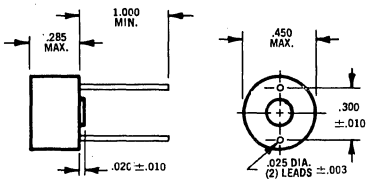
INDUCTORS

MINIATURE TOROIDS

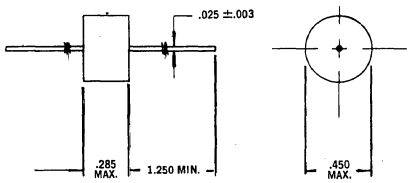
TYPE P/PF
Epoxy Encapsulated
MIL-T-27 Grade 5, Glass S



WT. .08 oz.

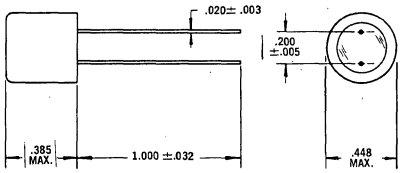
P	PF
NO FOOT	WITH FOOT

TYPICAL TYPE PA
Axial Lead Epoxy Encapsulated



WT. .08 oz.

TYPE M
Metal Cased
MIL-T-27 Grade 4, Class R



WT. .15 oz.

CORE NO. 03
Recommended Frequency: Up to 100 KHz.
Maximum Inductance: 250 mH.
Special Core Stabilization Available: D, W, M, L.

CORE NO. 13
Recommended Frequency: 10 KHz to 200 KHz.
Maximum Inductance: 100 mH.
Special Core Stabilization Available: D, W, M, L.

CORE NO. 29
Recommended Frequency: 50 KHz to 5 MHz.
Maximum Inductance: 15 mH.
Only Core Stabilization Available: ±90 PPM/°C

When ordering add the prefix P, PA, PF, or M to the Part Number for the case type desired.

INDUCTORS

TOROIDAL INDUCTORS

Studs are available on the "M" Series on special request.

Mechanical Tolerance: ±.015 unless otherwise indicated.

WHEN ORDERING, ADD CASE PREFIX (TYPE) TO PART NUMBER.†

EXAMPLE: U 24-1

CASE TYPE — PART NUMBER

† Add "C" to Part Number of molded inductor if clearance hole is desired.

CORE NO. 06

Recommended Frequency: Up to 30 KHz

Maximum Inductance: 7.2 H.

Special Core Stabilization Available: B, D, L, M, W.

WHEN ORDERING, ADD CASE PREFIX (TYPE) TO PART NUMBER.†
EXAMPLE: U 30-1
CASE TYPE — PART NUMBER

† Add "C" to part number of molded inductor if clearance hole is desired.

Selection Guide for TRW High Q Coils and Chokes

Over 40 years of specialization in High Q Inductors are reflected in the superior Q and temperature stability of the molybdenum permalloy dust toroid, ferrites, and laminated structures produced by TRW Inductive Products today. Range of application is from DC to 30 MHz.

This catalog lists many different types of stock inductors, but special custom designs produced to customers' specifications are available on special order. Characteristics such as taps, additional windings, special adjustments such as in a resonant circuit, higher voltage capability, inductance adjusted with DC, special mechanical configurations, and even better temperature stability than our stock items are available to customers' requirements.

WHILE THE TOROIDAL COIL is superior for frequencies above 1 kHz, the laminated structure is superior for lower frequencies. The ML, MO, and MQM uses a hum-reducing lamination structure and, in addition, the ML, and MQM are in hipermalloy shield cases.

The toroidal coils MS, MP, MM, MH, MW, FE, MQE have extremely low hum pickup due to the symmetrical winding on the toroidal core.

ALL STOCK INDUCTORS are measured at 0 DC. The maximum DC listings are for approximately 5% drop in inductance, and negligible heat rise. The typical curves of inductance variation with AC or DC currents, illustrated on the following pages, best show the range of operation for a particular inductor. The excitation is plotted in milliamperes $\times \sqrt{\text{mHy}}$. For example, the 100 mHy MS toroid (MS-100) with 10 ma of DC flowing has an excitation factor of 10 ma $\times \sqrt{100\ \text{mHy}}$ = 100, and the curve shows that approximately 90 mHy will be measured with 10 ma DC.

Since these high Q coils will saturate before any appreciable temperature rises occur, heating is usually not a problem. A general rule would be that four times the DC listings may be applied without any detrimental heating due to copper loss.

FOR VARIABLE INDUCTORS such as HVC, TVC and VIC, the DC values listed apply at the mean to minimum inductance settings only. The maximum inductance cannot be obtained with that amount of DC current flowing.

Temperature stability of all TRW/UTC inductors is excellent. Guaranteed limits and typical curves of inductance variation with temperature are shown for most types.

Engineering, laboratory, and production facilities are available for full engineering discussion, sampling, and large quantity production to meet special requirements.

Intermediate inductance values in an existing stock toroidal series are available, priced as the next higher inductance unit.

HIGH Q INDUCTORS — FIXED

Type No.	Stock Line Inductance Range	Approx. DCR Ohm/Hy	Approximate Peak Q	Approximate @ Freq.	Inductance Tolerance Adjustment	Temp. Stability	MIL Gr.
CH-100 thru CH-200	100 μHy-200 μHy	51,000	85	1500 kHz	±5% @ 1V, 500 kHz	±2%	4

High-Frequency High-Q Inductors

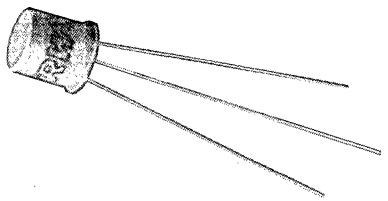
PACKAGING Temperature stable inductors in a TO-5 metal case.

MIL SPECS CM to complete MIL-T-27D Specs. Type number TF4S20YY. CH to complete MIL-C-15305E Specs. Type: LT10K.

APPLICATION CM Series shielded inductors have Qs over 120, and cover a frequency range from 10 to 800 kHz. Peak Q is centered at approximately 150 kHz.

CH Series shielded inductors have Qs over 100, and cover a frequency range from 0.2 to 3.0 MHz. Peak Q is centered at approximately 1.5 MHz.

CURRENT RATINGS CM Series DC rating is for approximately 10% drop in inductance, with negligible heat rise. CH Series DC rating is for a 40°C maximum heat rise, with negligible drop in inductance.



Type No.	Inductance Tolerance at 25°C	Test Frequency, kHz	Test Level, RMS V	Max. L Variation, −55°C to +105°C
CM	±5%	10	1.0	±3%
CH-100 thru CH-200	±5%	500	1.0	±2%
CH-300 thru CH-1000	±5%	250	1.0	±2%

Miniductor™ Series

PACKAGING Hermetically sealed, MS, MM, MH, MP, MW, epoxy molded symmetrical toroids. ML hipermalloy shield cased, hum reducing laminated inductor. MO, epoxy molded hum reducing laminated inductor. All have straight pin terminals for printed circuit applications.

TERMINALS Per MIL-STD-1276.

MIL SPECS To complete MIL-T-27D Specs. MIL Type No. TF5R20ZZ.

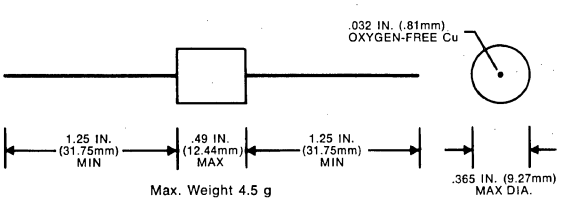
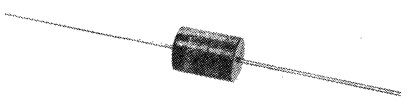
LL Series Power Inductor



Max. Weight 4.5 g



- Mountable through PC board or to posts
- Inductance from 30 to 5000 μH
- Rated current range: 1.6 to 0.25 A
- Low inductance drop at rated current
- Less than 3/8 inch in diameter
- Suitable for reel-mounted assembly
- Manufactured to meet MIL-T-27
- MIL Type No. TF5R04ZZ

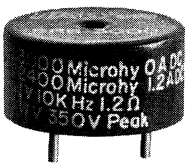
SR Power Inductors



PACKAGING Hermetically sealed, molded case.

MIL SPECS To complete MIL-T-27D specs. Type number TF5S04ZZ.

APPLICATION These inductors have low losses in the 3 to 100 kHz frequency range, making them ideal for switching regulator and AC filter choke applications.

INDUCTANCE Type numbers correspond to inductance values in microhenries, which are measured at 1 V, 10 kHz, 0 DC with an inductance tolerance of +15%, −5%. Values of inductance other than listed in an existing size are available. Part Number would be: SR(A, B or C) — (inductance in microhy at 0 DC).

CURRENT RATINGS Listing I_1 is for approximately 10% drop in inductance with a typical 20°C temperature rise, and Listing I_2 is for approximately 20% drop in inductance with a typical 40°C temperature rise.

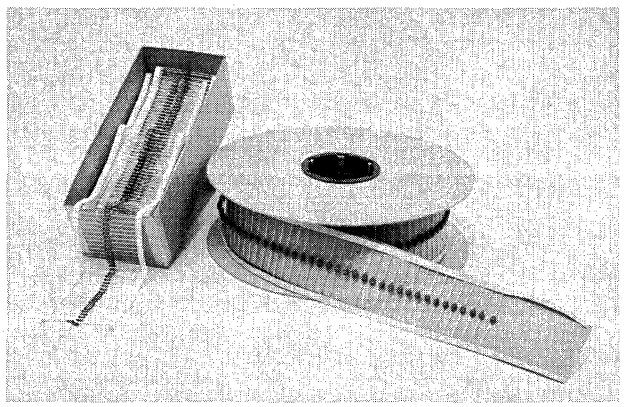
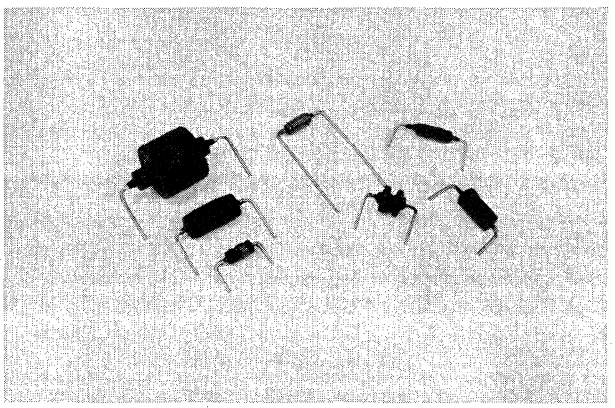
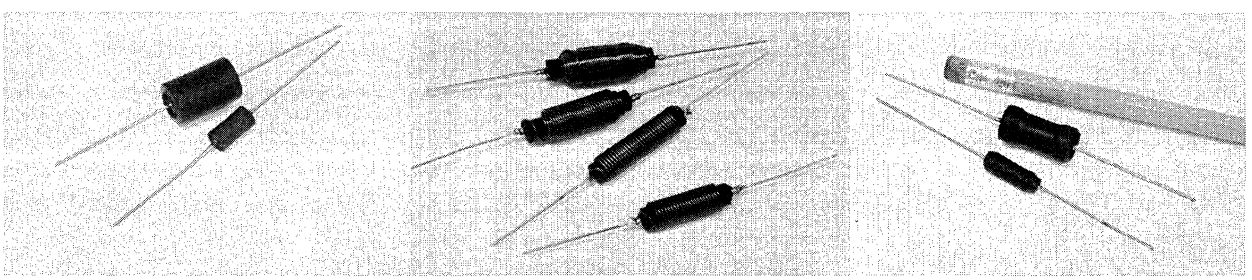
THE WILCO

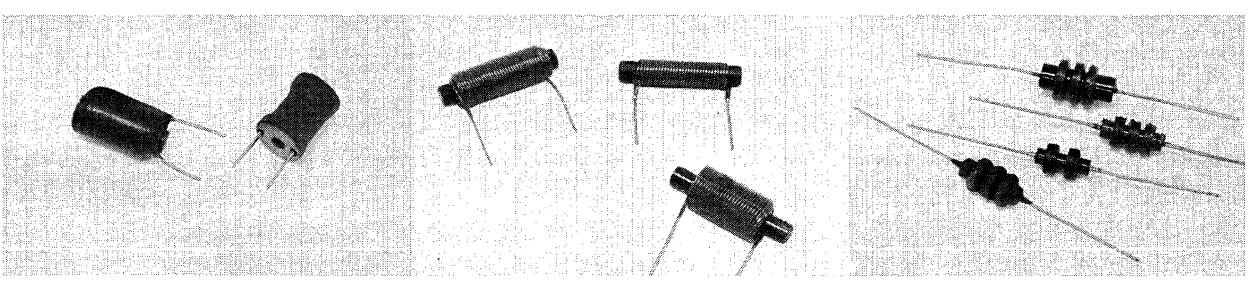
After 30 years of successful electronic component manufacturing, we at Wilco have learned that we can't be everything to everyone. What perhaps we have become best known and respected for is our responsive engineering and prompt shipments. What and when we say we'll deliver, will be delivered!





Special services include reel taping, cut & formed leads, custom prototypes, and engineering sample kits.





Custom inductive products include: high current filter chokes, hash chokes, shielded inductors and 3-section pi type windings.

For additional information on custom requirements at competitive pricing, contact Wilco Corporation.

Intermediate Values Available

All choke coils in this series are Durez covered and EIA color coded. They have an inductance tolerance of ± 10% and leads are No. 20 AWG tinned copper 1½" long. Parts U150 through U501 are wound on .156" dia. phenolic forms with "A" dimensions 7/16". Parts U601 through U102 are wound on the same form with "A" dimensions ½". Parts U252 through U752 use .156" dia. powdered iron forms, "A" dimension ½". Parts U103 through U253 use .187" dia. iron forms, "A" dimension ⅝". Diameters of coils vary from ¼" to ⅝" depending on inductance value.

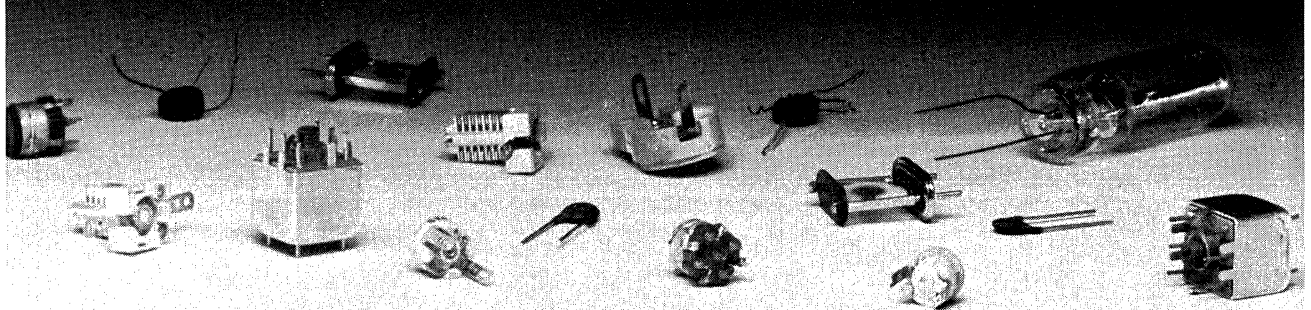
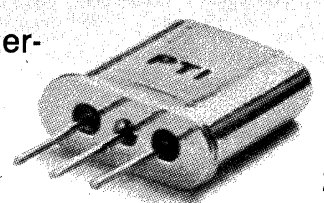
All choke coils in this series are the same size as the unit illustrated. Leads are of No. 20 tinned wire. Tolerances are ± 20% for W10G through W22G: ± 10% from W27G through W101. All units are impregnated with thermosetting varnish and are EIA color coded.

Our more popular, cataloged stock units are available in quantity for immediate delivery.

We gave up a lot to improve crystal filter reliability, size and cost.



A lot of components and interconnections, that is. The basic PTI monolithic filter consists of two electrode pairs deposited on the faces of a quartz wafer to form a two-resonator structure. Acoustical coupling between electrode pairs creates a two-pole response.



Simply by designing two-pole filters in cascade, using modern network theory, we can develop four to ten-pole tandem monolithic crystal filters offering maximum reliability, economy, mode suppression, attenuation and minimum size.

There's nothing else. It's that simple. Piezo Technology is the USA's leading supplier of monolithic and tandem monolithic filters, designed specifically for use in communications equipment requiring filtering from 5 to 300 MHz.

Choose from over 100 standard models from 10.7 to 200 MHz in a wide range of miniature, ultraminiature, upright, flat-pack and tandem configurations. Custom designs from below 5 MHz to 300 MHz are available with guaranteed IM, phase noise, linear phase or controlled group delay specifications.

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

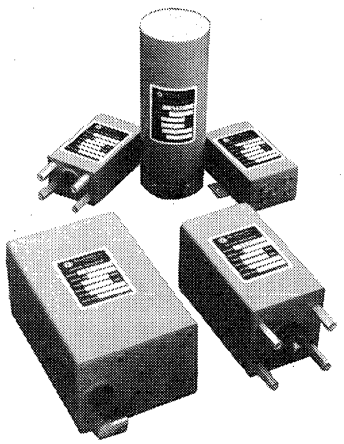
The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

AUSTRON INC.

P.O. BOX 14766, EXIT 248, N. IH35, AUSTIN, TEXAS 78761 • (512) 251-2313



AUSTRON OFFERS A COMPLETE LINE OF HIGH PRECISION OVENIZED CRYSTAL OSCILLATORS

- Up to 5 × 10^{-11}/24 hours aging
- Frequencies from 1 to 120 MHz
- MIL-SPEC, JANTX, Radiation hardened
- Custom engineering

SMALL LIGHT WEIGHT

The Austron Model 1100 Crystal Oscillator combines high stability with low power drain in a small, lightweight, plug-in package. This hermetically sealed crystal oscillator finds application whenever space is at a premium and performance cannot be compromised.

DIGITAL APPLICATIONS

The Austron Model 1105 is a low profile solid-state crystal oscillator designed to provide a highly stable 1 MHz logic output for IC applications. The Model 1105 operates from a 5 volt power supply. The size, weight, and stability performance have been packaged in a configuration for the IC instrument designer.

EXTREMELY LOW POWER

The Austron Model 1115 5 MHz Oscillator was specifically designed for undersea applications where high stability and minimal power drain are of prime importance.

VERSATILITY

The Austron Model 1120 is a compact, rugged crystal oscillator designed for a wide range of applications. This unit is available at many different frequencies, input voltages, and mechanical configurations.

LOW PHASE NOISE

The Austron 1120L features extremely low phase noise performance.

ULTRA HIGH STABILITY

The Austron Model 1150 is a very rugged, high precision crystal oscillator which was specifically developed for use in satellite navigation systems. The Model 1150 has application whenever system requirements demand a precise time base or frequency reference. Technical features include an ultimate aging of 5 × 10^{-11}/day, low phase noise, and a standard frequency of 5 MHz.

HIGHER FREQUENCY

Austron's latest addition to the Austron family of oscillators, the Austron Model 1170 Series VHF Oscillator, includes several units in the range of 35 MHz to 120 MHz.

OUTPUT FREQUENCY:	5 MHz Standard
AGING RATE:	5, 2 OR 1 × 10^{-9}/24 Hrs. after 72 hours continuous operation.
AMBIENT TEMPERATURE STABILITY:	Less than 2.5 × 10^{-8} from −20° to +65°C
MECHANICAL:	Size: 1.25 × 1.75 × 3.25 inches

OUTPUT FREQUENCY:	1 MHz; TTL Logic
AGING RATE:	10, 5, 2 or 1 × 10^{-9}/24 hours after 72 hours operation
AMBIENT TEMPERATURE STABILITY:	Less than 5 × 10^{-9} from 0°C to 55°C
MECHANICAL:	Size 1.25 × 1.75 × 3.25 inches

OUTPUT FREQUENCY:	5 MHz
AGING:	3 × 10^{-9}/24 hrs after 72 hours operation
AMBIENT TEMPERATURE	1 × 10^{-9}/24 hrs after 30 days operation
STABILITY:	Less than 5 × 10^{-9} from −2°C to 25°C NOTE: Higher temperature models available
MECHANICAL:	Size: Cylinder 2" diameter, 5.5" long.

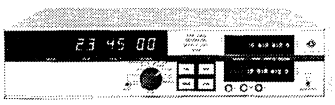
OUTPUT FREQUENCY:	1 MHZ THRU 10 MHZ
AGING RATE:	5, 2 or 1 × 10^{-9}/24 Hrs. after 72 hours continuous operation.
AMBIENT TEMPERATURE STABILITY:	Less than 2 × 10^{-9} from −20° to + 65°
MECHANICAL:	Size: 2.27 × 2.14 × 4 inches

OUTPUT FREQUENCY:	5MHz OR 10 MHz
PHASE NOISE: (1 Hz BW)	135 dB, Ten Hz 155 dB, One Hundred Hz 160 dB, One kHz

OUTPUT FREQUENCY:	5 MHz Standard
AGING RATE:	5 × 10^{-10}/24 hrs after operation. 1 × 10^{-10}/24 hrs after 30 days operation. Ultimate drift is typically 5 × 10^{-11} after 90 days operation.
AMBIENT TEMPERATURE STABILITY:	Less than 2 × 10^{-9} from −55°C to +60°C Less than 5 × 10^{-10} from 0°C to 50°C.
MECHANICAL:	Size: 2.37 × 3.18 × 5.0 inches.

CALL FOR DETAILS

Time/frequency instruments

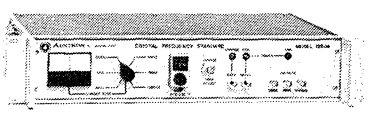


AUSTRON 8154

The Austron Time Code Instrumentation — a complete line of instruments from basic generators and readers to full complement tape search and control units. Available for bench, panel, rack, or portable; all standard IRIG, XR3, and NASA codes are available to give these instruments the flexibility to meet any system requirement.

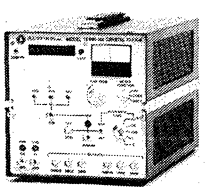
AUSTRON 2100

The Austron Loran-C receivers are microprocessor based automatic acquisition and tracking receivers that utilize the Loran-C groundwave to provide a traceable reference for time epoch determination, frequency management, calibration, and control. These receivers provide time accuracy to one microsecond and frequency accuracy to parts in 10^{-12}.



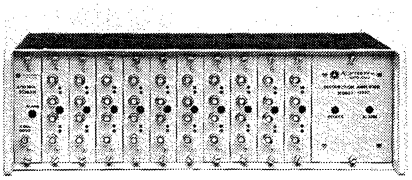
AUSTRON 1250A

The Austron Model 1250A Crystal Frequency Standard generates highly stable output frequencies at 5 MHz, 1 MHz, and 100 kHz. Each of these outputs has excellent waveform and spectral purity. Containing its own internal battery back-up, it also may be used with an external standby power supply such as the Austron Model 1290A Standby Power Supply.



AUSTRON 1210D

The Austron Model 1210D series of Portable Crystal Clocks are compact, self-contained, self-powered time references providing stable time outputs at several pulse and sinusoidal frequencies, as well as a digital time-of-day display.



AUSTRON 1295C

The Austron Model 1295C Distribution Amplifier provides the necessary noise immunity and drive capability to interface a localized frequency standard to other equipment at distances up to 1,000 feet. Four standard frequencies, 10 MHz, 5 MHz, 1 MHz and 0.1 MHz can be accommodated (for other frequencies consult factory). Input frequencies and number of outputs for each frequency are customer specified to provide a more cost effective system. Single frequency units can have up to 40 individual outputs, while units with 2 to 4 frequency inputs will have four or more outputs for each input.

SYSTEMS—complete systems for generation, management, and distribution of precise time and frequency. Austron's engineering has led to such sophistication as the secure communications frequency control sets AN/GSQ-174 and AN/GSQ-183. Time and Frequency Receivers, Disciplined Frequency Standards, Distribution Amplifiers, Time Code Generators and Readers, and all ancillary equipment along with Austron Engineering . . . put it to work, for you!

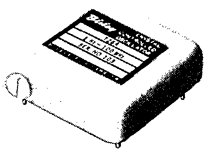
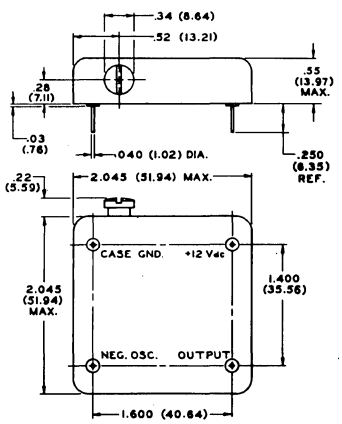
T26A414/441*			+12	±10%	35	

FREQ. ADJUST. RANGE: ±5 X 10^{-6} MIN. AGING RATE: 1 X 10^{-6}/YR.



T26A

CUSTOM OSCILLATORS / BLILEY TYPE T26A SERIES		
FREQUENCY RANGE / OUTPUT WAVEFORM	FREQUENCY STABILITY vs TEMPERATURE RANGE	
1 MHz – 20 MHz SINEWAVE OR 50 kHz – 20 MHz TTL LOGIC	±1 x 10–6	0 to +60°C
	±5 x 10–7	
	±1 x 10–6	–20 to +70°C
	±5 x 10–7	
	±1 x 10–6	–40 to +70°C
	±2 x 10–6	–55 to +70°C
	±1 x 10–7	+20 to +40°C



SUPPLY REQUIREMENTS:
+12 VDC ±10% REG. AGING RATE: 1 X 10^{-6}/YR.

Options available:

- CMOS logic output from 1 Hz – 20 MHz
- Sine Wave & TTL logic output from 20 MHz – 100 MHz
- Other Supply Voltages

Voltage Controlled (VCXO) Crystal Oscillators

BLILEY VOLTAGE CONTROLLED CRYSTAL OSCILLATORS COMBINE INHERENT CRYSTAL STABILITY AND VOLTAGE CONTROLLED FREQUENCY DEVIATION IN A SINGLE SOLID STATE DEVICE. CENTER FREQUENCY RANGE FROM 1–100 MHz WITH PERFORMANCE CHARACTERISTICS TABULATED BELOW:

FREQUENCY DEVIATION	FREQUENCY STABILITY	TEMPERATURE RANGE
± .01%	± .001% ± .002%	0 to 50°C –20 to +70°C
± .05%	± .002% ± .005%	0 to 50°C –20 to +70°C
± .1%	± .004% ± .008%	0 to 50°C –20 to +70°C
± .2%	± .005% ± .01%	0 to 50°C –20 to +70°C

- Standard design parameters are based on operation with –12 Vdc; 25 mA supply. Other voltages may be specified as a custom option.
- Standard output is sine wave, typical 1V rms into 1000 ohms or .25V rms into 50 ohms.
- Mechanical trim is provided for center frequency adjustment.
- Typical modulation voltage is ±5V with a modulating input impedance of 10K ohms and modulation rate from DC to 20 kHz

TYPICAL LINEARITY CHART (C.F. 45 MHz & ± 14 kHz DEVIATION)

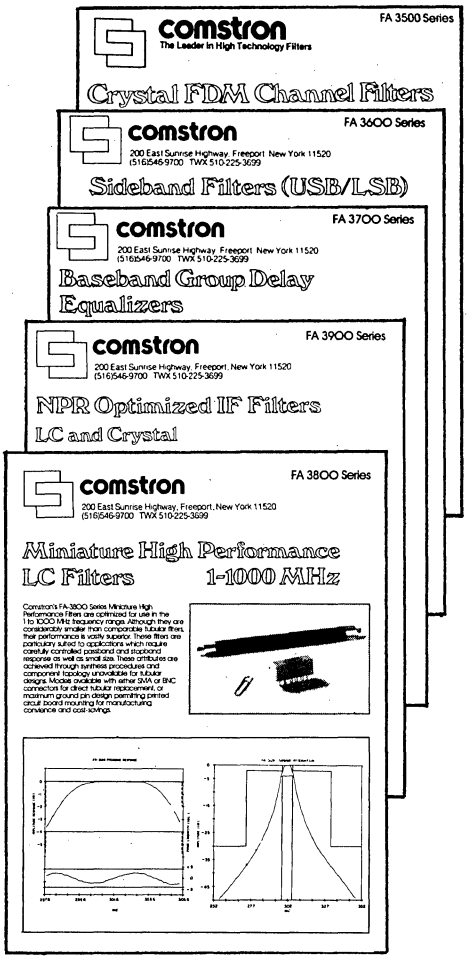
TECHNOLOGY " + " FILTERS

The Extra Edge in Systems Performance DC to 1 GHz

Comstron has developed optimum frequency or time domain filters to produce near theoretical system performance. These technology + filters are available as catalog items or custom tailored to your needs.



Design

Comstron has implemented modern network synthesis and physical realization techniques to the point where highly reliable, compact, LC and crystal filters are available – quickly and economically. Proprietary computer analysis, modeling, and optimization programs efficiently arrive at near-optium solutions to spectral, time domain, and stochastic problems. The Company's Enhanced Synthesis Program (ESP), Filter Optimization Program (FOP) and Parameter Optimization Program (POP) provide design parameters for systems oriented functions. Requirements for group delay equalization, wide band arithmetic symmetry, x/sin x amplitude correction, corrected Nyquist filters, phase compensation, and time domain response designs are routinely and efficiently handled.

Test

The Company's commitment to excellence is evident in its extensive test facilities. Automatic computer based network analyzers cover the frequency range from dc to 1.3 GHz with full plotting and printer output capability. Parameters which are automatically measured include amplitude response, phase response, group delay, and return loss. Time domain testing can also be performed to verify impulse response or response to complex waveforms.
Computer directed environmental testing allows unattended measurements of performance over temperature on a production basis. Comstron's proprietary Automatic Filter Test (AFT) programs permits rapid and accurate generation of acceptance test procedures as well as full documentation and data files when required.

Quality Control

Comstron maintains a Quality Control Department that ensures compliance with MIL-I-45208A and MIL-Q-9858A when applicable. Microscopic inspection, controlled environment, material control and traceability, solder training programs, and strict configuration management all contribute to producing an exceptionally reliable product.
The quality control program is continuously monitored. Over the years since its inception, Comstron has assembled a dedicated, conscientious staff whose pride of workmanship and customer loyalty is the keynote of the Company.

CRYSTAL OSCILLATORS

VCXO's To 1 GHz
TCXO's To 1 GHz

Comstron, the technology leader in oscillators for military, commercial, and deep-space applications, welcomes the opportunity to assist you with your crystal oscillator requirements. Through proprietary computer-generated design, testing and production techniques, Comstron delivers state-of-the-art low noise performance on VCXO's, TCXO's, Oven Controlled Crystal Oscillators and phase locked sources to 1 GHz. The Company's Design for Optimum Performance (DOP) programs provide optimization of performance attributes as well as sensitivity analysis. Our design and high reliability resources can make the difference in your system. Listed are typical standard designs from our Oscillator product library. However, modifications to suit your specific needs are easily accommodated.

	Special Connectors Available		

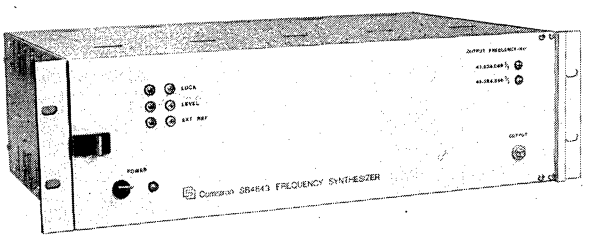
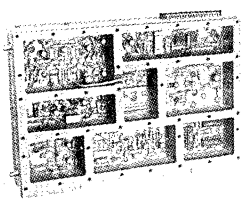
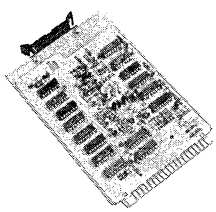
Phase Locked Crystal Oscillators

Comstron's preeminant technology in frequency synthesizers and locked sources can be put to use in your system. Modular building blocks are configurable to cover frequencies from low audio to 1 GHz. When system requirements dictate superior short term stability (phase noise), long term stability and reliability, Comstron's OEM line fills the need.







Ordering Information

How to Specify Part Number:

O for Oscillator;

plus one letter for type.

P = Oven controlled Crystal Oscillator
V = VCXO
T = TCXO

plus one letter for output

S = Sine
E = ECL
C = CMOS
T = TTL

plus four digits for frequency

XXXX in .1 MHz

Example:

OVS-0214

Oscillator VCXO Sine 21.4 MHz

Where requirements differ from listed models, choose the closest model and provide details regarding your specific needs.

See our ads in Sections 2700 & 2900.

OSCILLATORS

For over twenty years, the CONNOR WINFIELD Corporation has been producing high frequency control products for both military and commercial applications. CONNOR WINFIELD has built an excellent reputation as a source of custom designed oscillators. We are also able to provide attractive discounts on large volume orders, but if you are in a hurry, our low volume lead times are consistently short on all standard models.

What follows is only a partial listing of the extensive oscillator capabilities we have available. We invite you to write or call us with your special oscillator requirements; or if you would like to know more about our new models, our engineers and sales staff are available to assist you.

CONNOR WINFIELD spotlights these new models:

- ★ECL-A,B : ECL logic in a DIP metal package—up to 200 MHz (pg. 1)
- ★PL14R1,2,3 : phase lock oscillator in a 14 pin DIP package. (pg. 3)
- ★SW1, SW2 : High frequency sine wave—up to 200MHz in a .2" high DIP package. (pg. 1)
- ★TC10A,B : High frequency TCXO in a 1" × 1" × .62" package (pg. 3)
- ★C13R1,2 : rugged solid state oscillator in a .2" high DIP metal package. (pg. 2)
- ★C14R5L : low current CMOS logic—<1mA (pg. 1)
- ★S15R8 : Low cost, fast delivery of TTL DIP oscillators—stock frequencies only. (pg. 2)

TTL SERIES*

Output load	1 – 10 TTL
Duty Cycle	50/50 ± 10%
Supply Voltage	+5Vdc ± 5%
Supply Current	85ma max.

Available Options:

Gating-Pin 1-Logic 0 enables-Logic 1 disables
Other Temperature Ranges and Frequency Tolerances Available

Low cost on large volume orders

LSTTL SERIES

Output Load 1–10 LSTTL 1–3 TTL
Duty Cycle 50/50 ± 10%
Supply Voltage +5Vdc Supply Current - 50ma max.

CMOS SERIES**

Output Load CMOS
Duty Cycle 50/50 ± 10%
Supply Voltage +5 to +15Vdc Supply Current 3–20ma

100K ECL SERIES

Output 100K ECL
Duty Cycle 50/50 ± 10%
Supply Voltage –4.5Vdc or –5.2 Current 50ma
Please specify No load

SINEWAVE SERIES

DPS1 – Supply Voltage +5Vdc
Output Voltage 1Vrms 10k Load

DPS2 – Supply Voltage +8Vdc to +15Vdc
Output Voltage 1.5Vrms to 3Vrms 10k Load

SW1 – Supply Voltage +5Vdc
Output Voltage 0dBm 50Ω Load

SW2 – Supply Voltage +12Vdc
Output Voltage 10dBm 50Ω Load

Total Harmonic Distortion <5%

Model	Package	Frequency Range	Freq. Toler.	Temperature Range
S14R5	1	20kHz to 20MHz	±.005%	–25°C to +75°C

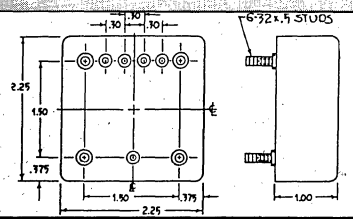
DCXO SERIES



MODEL D5000
Digitally Compensated Crystal Oscillator

The DCXO provides the high stability of an ovenized crystal oscillator while consuming much less power and requiring no warm up time.

The memory in the DCXO is also re-programable should the crystal age or drift out of tolerance over time.

Frequency Range	1MHz to 20MHz	
Output	LSTTL or CMOS	
Frequency Tolerance	A ± 1 × 10 − 6	−55°C to +125°C
	B ± 5 × 10 − 7	−40°C to +85°C
	C ± 2.5 × 10 − 7	0°C to +70°C
Aging Rate	1ppm / year	
Supplies	± 12Vdc +5Vdc	500mW

HOW TO SPECIFY A QUARTZ CRYSTAL

If the parameters for the crystal in question are not already covered by a MIL-SPECIFICATION or by a formal SPECIFICATION CONTROL DRAWING, then Items 1 through 6 are essential.

(1) **MODE OF OPERATION** i.e. fundamental, third, fifth, seventh, ninth or eleventh overtone.
(2) **HOLDER STYLE** i.e. HC-6/u, HC-18/u, HC-35/u, etc, depending on your individual application and the frequency.
(3) **CALIBRATION TOLERANCE AT REFERENCE TEMPERATURE** i.e. ± 20 ppm @ + 25°C, ± 5 ppm @ + 75°C, etc.
(4) **TEMPERATURE STABILITY** the allowable frequency deviation over a specified temperature range, with reference to the actual frequency measured at the calibration temperature. (i.e. ± 15 ppm, ± 2.0 ppm, etc.)
OR TOTAL TOLERANCE the total allowable deviation over a specified temperature range, with reference to the nominal frequency (i.e. calibration tolerance and temperature stability combined). (i.e. ± 50 ppm, ± 30 ppm, etc.)
(5) **OPERATING TEMPERATURE RANGE** the temperature range over which the temperature stability or the total tolerance is to be effective.
(6) **CIRCUIT CONDITION** will be either PARALLEL or SERIES resonance. If PARALLEL resonance, please state the load capacitance.

SPECIFICATION CODING

We use a system whereby we code the major parameters of a crystal specification using a combination of 9 digits. A typical code would be **A251DFE-32** and would be interpreted as follows. **A** = fundamental mode, **25** = HC-25/U holder, **1** = undercut pins per MIL-H-10056, **D** = calibration tolerance of ± 10 ppm @ + 25°C, **F** = temperature stability of ± 20 ppm with reference to the actual frequency measured @ + 25°C, **E** = temperature range of — 15°C to + 65°C over which the temperature stability is effective, **-32** = a circuit condition of parallel resonance and with a load capacitance of 32 pF.

MODE		HOLDER			CALIBRATION TOLERANCE AT REFERENCE TEMPERATURE		TEMPERATURE STABILITY OR TOTAL TOLERANCE		OPERATING TEMPERATURE RANGE (C)		CIRCUIT CONDITION

1.0-175.0 MHz CRYSTALS

STANDARD DESIGNS

CTS Knights offers standard crystals, available in **Resistance Weld, Solder Seal** and **Coldweld** packages. All three are available in the two basic holder sizes (HC-18 and HC-6), with pin or wire lead terminations.

CHART A shows standard part numbers which can be purchased by specifying only part number and frequency. The type of seal is indicated by the part number prefix.

R = Resistance Weld
S = Solder Seal
K = Coldweld

In chart A all part numbers have the R prefix. If you wish **Solder Seal** or **Coldweld,** change the prefix letter. When ordering standard crystals by part number, you will receive the following electrical specifications:

CALIBRATION TOLERANCE:

Solder Seal	±.003% @ 25°C
Resistance Weld	±.002% @ 25°C
Coldweld	±.002% @ 25°C

LOAD CAPACITY: Last letter specifies load:
A = 20 PF
B = 32 PF
C = series resonance

RESISTANCE: Specified on chart A

SHUNT CAPACITY: 7 PF Max.

STABILITY: ±.003% of 25°C frequency from −40 to +70°C

AGING:

Solder Seal —	< 10 PPM/YR
Resistance Weld —	< 5 PPM/YR
Coldweld —	< 3 PPM/YR

To order standard crystals, specify P/N and frequency. EXAMPLE: To order the basic HC-49 package size with wire leads, **Resistance Weld,** at 4.00 MHz, 20 PF load capacity, specify: "R1335-2-BA @ 4.00 MHz."

CUSTOM DESIGNS

Custom crystals include any which cannot be ordered by Specific CTS Knights part number. It does not automatically mean increased cost. Tighter specifications, detailed parameter testing, etc., involve additional cost factors.

Design limits are stated below. Your own specification can be written within these limits. This is intended as a practical window and does not exclude other designs. Query us first on State-of-the-Art needs.

HOLDER: **Resistance Weld, Solder Seal** and **Coldweld** holders are available. See outline drawings section. Note availability of hold-down top wires.

FREQUENCY RANGE: 1 MHz to 175 MHz (see chart A for holder vs frequency).

CALIBRATION: ±.0005 to ±0.1% @ 25°C

TEMP. STABILITY: ±.0002% to ±.01% of 25°C Frequency depending on temperature range.

TEMPERATURE RANGE: Common ranges are:

0 to 70°C
−30 to + 85°C
−55 to +105°C

PULLABILITY: If required (see Fig. 3)

LOAD CAPACITY: When designing your circuit, keep in mind that 20 PF, 32 PF and series resonance are common load capacities. Spec the load of your circuit. Loads between 15 PF and series can be specified without cost impact.

SERIES RESISTANCE (Rs): See performance curve

DRIVE LEVEL: 1-10 MHz 0.1 to 5.0 MW
Above 10 MHz 0.1 to 2.0 MW

SPURIOUS FREQUENCY: 6 db min. separation (2:1 for Resistance) is practical for any crystal frequency. Better attenuation is available in many areas.

To order custom crystals, describe the crystal in full, using the parameter format shown. Consult the factory if necessary.

SPECIALISTS IN FREQUENCY MANAGEMENT

PRECISION CRYSTALS

HIGH STABILITY PRECISION CRYSTALS 1 MHz - 40 MHz

Precision crystals are used in applications where long term aging of better than 2 PPM/YR is required. Two groups are available; those calibrated at room temperature and those calibrated at an elevated temperature, usually between 70° - 100°C, for ovenized oscillator use.

Frequency stability over temperature is tailored to customer's specific need. Frequency deviation over temperature may be held within $\pm 5 \times 10^{-7}$ of the characteristic AT curve.

CRYSTAL TYPE	CTS HOLDER‡	FREQUENCY RANGE	MODE	CALIBRATION TOLERANCE	AGING	DRIVE	Q
For Room Temperature Oscillator use	K3/K3W	8-25 MHz	Fund.	$\pm 10\times10^{-6}$ @ 25°C	1×10^{-8}/day	.1 MW	100K-400K
	K3/K3W	25-40 MHz	3rd	$\pm 10\times10^{-6}$ @ 25°C	1×10^{-8}/day	.1 MW	100K-400K
	K5/K5W	3-10 MHz	Fund.	$\pm 10\times10^{-6}$ @ 25°C	1×10^{-8}/day	.1 MW	100K-400K
	K17/K17W	1- 5 MHz	Fund.	$\pm 10\times10^{-6}$ @ 25°C	1×10^{-8}/day	.1 MW	100K-400K
For Ovenized Oscillator use	K17/K17W	1- 5 MHz	Fund.	$\pm 5\times10^{-6}$ @ Temp.	1×10^{-9}/day	.1 MW	100K-500K
	K17/K17W	4- 7 MHz	3rd	$\pm 5\times10^{-6}$ @ Temp.	1×10^{-9}/day*	.1 MW	800K-1.5KK
	K17/K17W	7-30 MHz	3rd	$\pm 5\times10^{-6}$ @ Temp.	1×10^{-9}/day	.1 MW	800K-1.5KK

* 5×10^{-10}/day available.

‡ TO5 and TO8 holders are available at many frequencies, consult factory for details.

MILITARY CRYSTALS

MILITARY CRYSTALS

CTS KNIGHT'S test lab is government approved for qualification testing to military specification MIL-C-3098G, and includes equipment for environmental testing such as humidity, shock, vibration and aging. Production test equipment conforms to maintenance and periodic re-calibration required by US Government calibration system requirements in MIL-C-45662A.

CTS KNIGHTS is QPL Approved On The Following Military Types:

CR-18A/U (1-5, 10-20 MHz)
CR-19A/U (1-5, 10-20 MHz)
CR-52A/U (19-61 MHz)
CR-54A/U (50-110 MHz)
CR-55A/U
CR-56A/U (50-110 MHz)
CR-58A/U (1-20 MHz)
CR-60A/U
CR-64/U (4.2-20 MHz)
CR-67A/U
CR-72/U
CR-75/U (50-110 MHz)

CR-79/U (4.2-20 MHz)
CR-81/U (17-62 MHz)
CR-82/U (50-110 MHz)
CR-83/U (50-110 MHz)
CR-89/U
CR-97/U
CR-106/U
CR-111/U
CR-114/U
CR-117/U (30-62 MHz)
CR-124/U
CR-128/U
CR-139/U (20 MHz)
CR-140/U
CR-141/U (50-90 MHz)
CR-157/U (1-20 MHz)

MIL-EQUIVALENT CRYSTALS

MIL-C-3098G requires special testing to ensure compliance with the entire specification. Any crystal marked with the "CR" number must receive this testing.

If your required crystal details match those of a mil spec in general parameters, but your commercial application does not demand the exhaustive testing, you can order a mil equivalent crystal. The design will be the same. The crystal **will not** receive the detailed testing. Marking will be standard commercial marking. The "CR" number will not appear on the crystal.

A mil vs commercial cross reference is shown below:

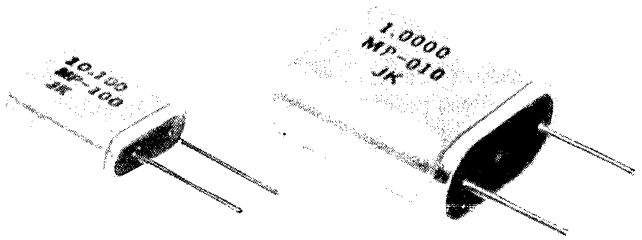
SPECIALISTS IN FREQUENCY MANAGEMENT

MICROPROCESSOR CRYSTALS



CTS Knights microprocessor crystals offer a low cost crystal for microprocessor clock applications. Reliability is assured by the use of a mil-approved quality control process. These are solder seal and resistance weld crystals with 0.5" min. lead length.

Microprocessor crystals are available as "off the shelf" items from CTS authorized distributors.

OUTLINE DRAWINGS CRYSTALS

OUTLINE DRAWINGS

CTS Knights supplies crystals in four package sizes, (groups) of holders. Physical size and configuration distinguish each group. These are:

HC-18 GROUP
H3 (HC-25/U)
H3W (HC-18/U)
R3 (HC-50/U)
R3W (HC-49/U)
K3 (HC-42/U)
K3W (HC-43/U)

HC-32 GROUP

HC-6 GROUP
H17 (HC-6/U)
H17W (HC-33/U)
R17 (HC-48/U)
R17W (HC-51/U)
K17 (HC-36/U)
K17W (HC-47/U)

SPECIAL GROUP
TO5 (HC-35/U)
TO8 (HC-37/U)
R2W (Similar to HC44/U)
HC-40/U

Three sealing methods are used. "H" holders are solder sealed. "R" holders are resistance welded. "K" and "T" holders are coldwelded. These sealing techniques ensure long term isolation from external environments. Solder sealing, resistance welding and coldwelding are designed to meet the military leak rate specification. Pin-type leads are normally used in sockets; wire-type leads are common for circuit board use. Resistance and coldweld are intrinsically cleaner packages and thus have better reliability.

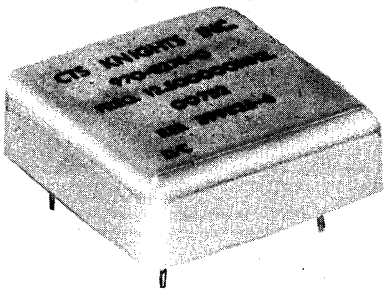
TCXO-TCVCXO CRYSTAL OSCILLATORS

TEMPERATURE COMPENSATED CRYSTAL OSCILLATORS (TCXO's)
VOLTAGE CONTROLLED - TEMPERATURE COMPENSATED CRYSTAL OSCILLATORS (TCVCXO's)

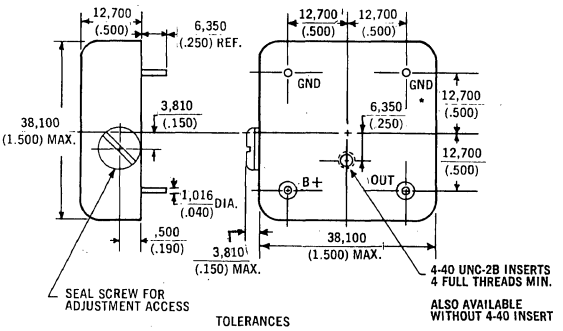
Low power consumption, high stability over wide temperature extremes, and small physical size characterize CTS Knights' TCXO and TCVCXO crystal oscillators. Add excellent environmental characteristics including immunity to humidity, vibration and shock, satisfying the requirements of the instruments and communications industries.

High reliability and stringent long term qualities common in military applications are available in a variety of designs. Note the options and modifications, the flexibility of design which offers the user choices to fulfill specific needs.

JKXO-12 (TCXO)
JKVXO-12 (TCVCXO)



FEATURES:
Low profile
Solder seal
Vibration 15G's, 10-2000 Hz

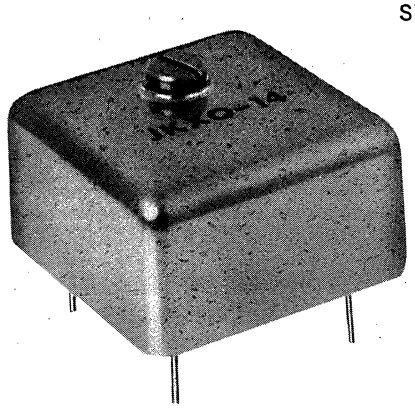


* VCO INPUT ON TCVCXO MODELS

FIG. 21

JKXO-14 (TCXO)

FEATURES:
Top access hex drive trim adjustment
Sine or TTL output



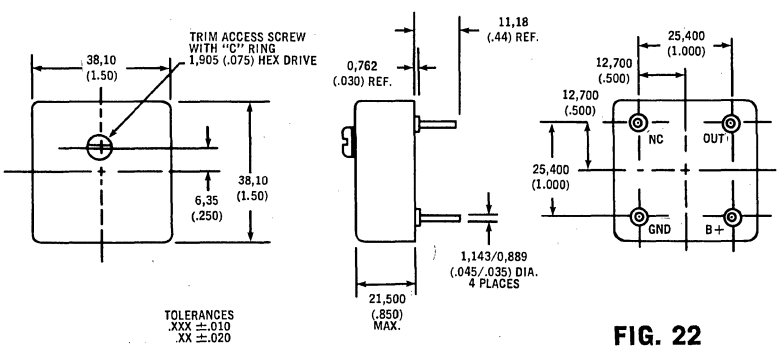


FIG. 22

JKXO-16 (TCXO)
JKVXO-16 (TCVCXO)

FEATURES:
Solder seal
Wide frequency range
Specialized outputs available

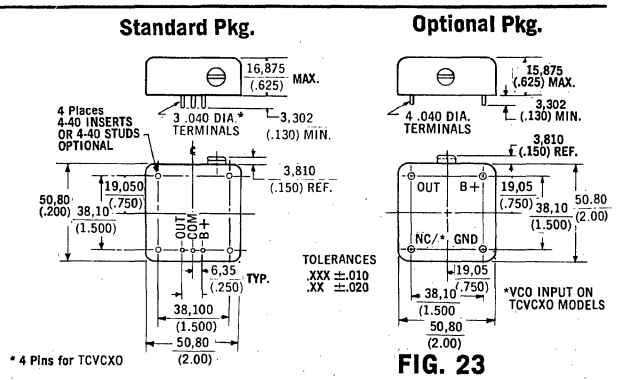

FIG. 23

CTS KNIGHTS

SPECIALISTS IN FREQUENCY MANAGEMENT

TCXO-TCVCXO CRYSTAL OSCILLATORS

JKVXO-22

FEATURES:

Available as VCXO or TCVCXO. Temperature stability and deviation are customized per application. 5 volt supply, Mod voltage range 0 to +5 VDC.

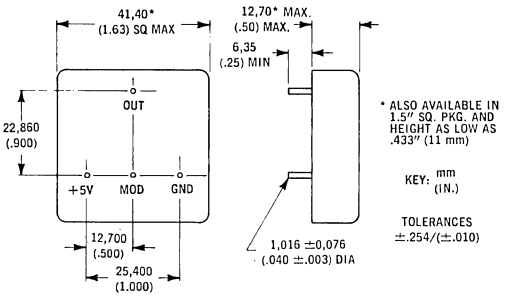

FIG. 24

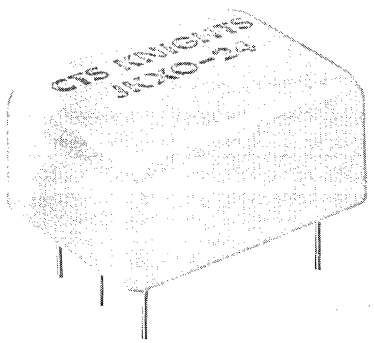
JKXO-24 (TCXO)



FEATURES:

Compact size with hermetic seal. Frequency adjustment is via an externally applied voltage or a 10K pot. Also available with internal mechanical adjust trimmer with seal screw.

CRYSTAL OSCILLATORS

HIGH STABILITY OVENIZED CRYSTAL OSCILLATORS

CTS Knights ovenized oscillators are available in thermostatically controlled models as well as proportional control models. A variety of design options are available to the user, including very high stability, low power, small size and sine wave or square wave (TTS or CMOS) output. Contact CTS Knights for your special requirements.

JKSC-127 FAST WARM-UP SC CUT OCXO

The JKSC-127 offers ultra fast warm-up with excellent long term, short term and phase noise characteristics. The design utilizes a 10 MHz Coldweld Sealed SC cut overtone crystal along with a uniquely designed proportionally controlled double oven which minimizes stabilized power consumption. The JKSC-127 is available fully militarized with an MTBF of greater than 100,000 hours in ground mobile and airborne environments.

GENERAL SPECIFICATIONS

FREQUENCY: 10.0 MHz or 10.230 MHz

INPUT VOLTAGE: Oven +28 VDC ±5%
Oscillator +15 VDC ±5%

INPUT CURRENT:

Oven @ turn-on	1.2 Amps Maximum
Oven @ 25°C	125 mA Typical
Oven @ −55°C	240 mA Typical
Oscillator	20 mA Maximum

FREQUENCY STABILITY VS. TEMPERATURE: $\pm 2 \times 10^{-9}$ from −55°C to +71°C

FREQUENCY STABILITY VS. TIME:
$\pm 5 \times 10^{-12}$ RMS/SEC
$\pm 5 \times 10^{-10}$/DAY **AT SHIPMENT**
$\pm 3 \times 10^{-8}$/YEAR

FREQUENCY STABILITY VS. VOLTAGE: $\pm 5 \times 10^{-10}$ for ±5% Change

WARM-UP: Referenced to 30 minutes

@ −55°C	$< 5 \times 10^{-9}$ in 7 minutes
@ −32°C	$< 5 \times 10^{-9}$ in 5 minutes
@ +25°C	$< 5 \times 10^{-9}$ in 3 minutes

RETRACE: 48 hours off Ta = +25°C < 5×10^{-9} in 15 minutes referenced to the turn off frequency.

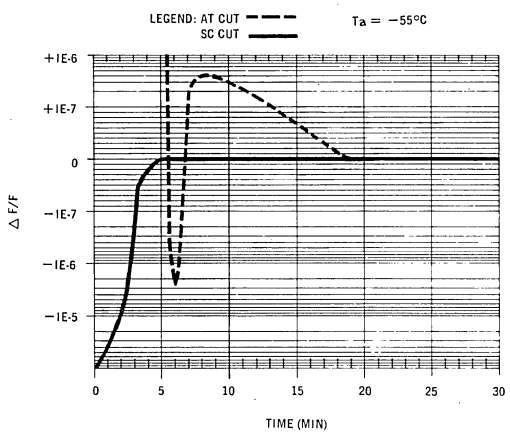
PHASE NOISE (1 HzBW):

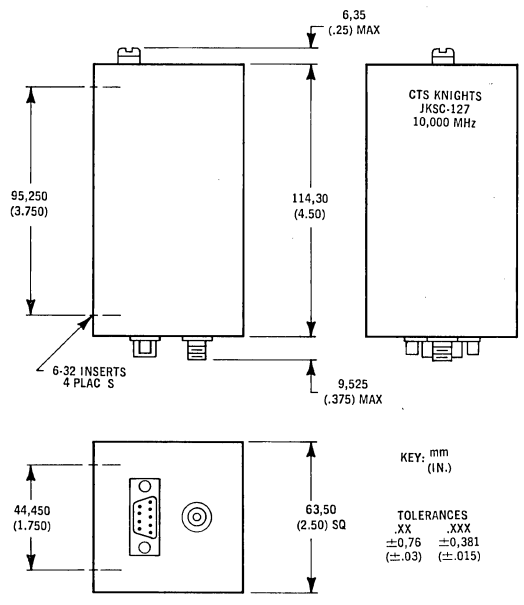
@ 10 Hz offset	−120 dbc
@ 100 Hz offset	−140 dbc
@ 1 KHz offset	−150 dbc
@ 100 KHz offset	−150 dbc

RF OUTPUT: +5 dbm Minimum into 50 Ohms

HARMONICS: −25 dbc

FREQUENCY ADJUSTMENT:
Coarse (Mechanical) $\pm 5 \times 10^{-7}$ Minimum
Fine (Electrical) $\pm 5 \times 10^{-8}$ Minimum for ±5 VDC





MODIFICATIONS OF THE JKSC-127 AVAILABLE — CONSULT FACTORY

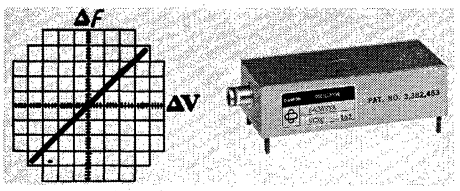
DAMON *THE FORM FACTOR SPECIALISTS*

VCXOs — 1 KHz to 500 MHz

Damon VCXOs provide high stability over a broad range of center frequencies. An optional square wave or pulse output signal compatible with I. C. logic circuits is available.

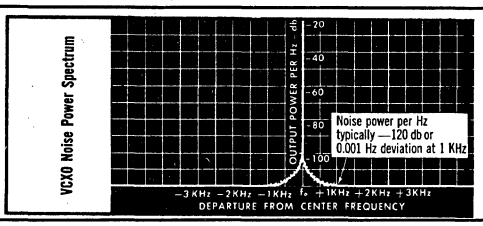


VCXO CHARACTERISTICS:

Center Frequency .. 1 KHz to 500 MHz
Deviation ..... .01% to 0.5% of Center Frequency
Linearity 1% to 5% of Peak Deviation
Frequency Stability .... Determined by Peak Deviation and Operating Temp.
Modulation Rates ..... DC to 2 MHz

Low Noise VCXOs

Damon low noise miniaturized VCXOs are all solid state quartz crystal stable oscillators whose frequencies can be varied linearly by an external DC or AC modulating signal. Only a source of power and control signal are required . . . no auxiliary compensating circuitry.

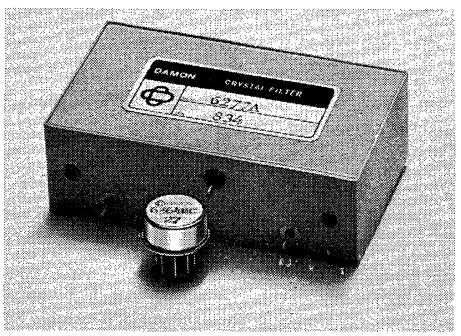


TYPICAL CHARACTERISTICS:

Center Frequency 10.000 MHz ±1 KHz
Deviation ..... ±10 KHz
Linearity ..... ±1%
Modulation Rate ..... Flat to 4 KHz
Output Power ..... >1 MW

Gaussian Crystal Filters

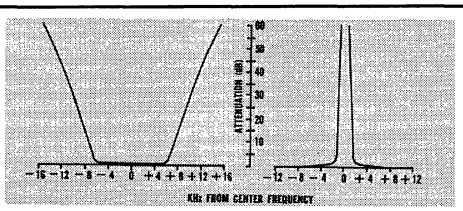
Gaussian Crystal Filters of either conventional or monolithic design. Useful in FM communications or radar systems where flat time delay is required. In a coherent pulsed radar, it can minimize return-pulse overshoot. Eliminates ringing problems in swept spectrum analysis. Available in 2 to 8 pole designs.



Center Frequency
Conventional ..... 10 KHz - 35 MHz
Monolithic ..... 3 - 30 MHz
3 dB Bandwidth ..... 100 Hz - 30 KHz
Shape Factor, 30 dB to 3 dB 3:1 to 7:1
Ringing, Pulse or Impulse 25 - 50 dB down
Phase Linearity ..... ±2%
No. of Poles
Conventional ..... 2 - 8
Monolithic ..... 2 - 4
Volume
Conventional ..... 1 - 6 cu. in.
Monolithic ..... 0.016 - 0.4 cu. in.

Band-Pass/Reject Crystal Filters

A wide variety of conventional crystal filters are produced at Damon. Standards designs such as Butterworth, Chebyshev, Gaussian, Bessel, and Legendre, as well as custom tailored designs are available.

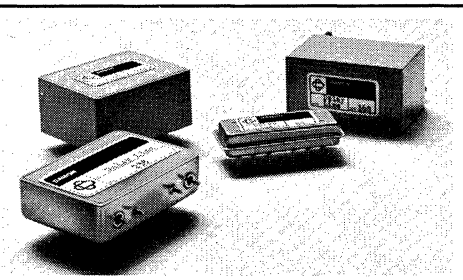


RANGE OF PARAMETERS:

Center Frequency .... 10 KHz - 75 MHz
Bandwidth ..... .01% - 3% of C.F.
Shape Factor ..... Down to 1.2:1
Differential Phase Shift ..... ±2°
Group Delay Uniformity ..... ±5%

Surface-Wave Delay Lines

With signal transfer **across** the surface instead of through the body (a state-of-the-art development), the new Surface-Wave concept results in substantially smaller packages, lower cost in production quantities and superior performance over a 20 MHz to 300 MHz range.

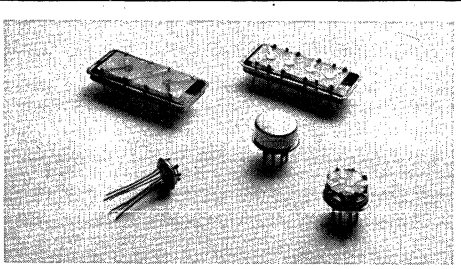


RANGE OF PARAMETERS:

Frequency Range .. 20 MHz - 300 MHz
Time Delay Range 0.5 - 20 Microsecs.
Bandwidth at −3 dB ..... 3% - 30% of Center Frequency
Insertion Loss ..... 10 - 20 dB
Spurious Responses 25 - 30 dB below Desired Response
Environment ..... Full Military Temp., Shock, Vibration Available
Typical Size ..... < 1 cu. in.

Monolithic Crystal Filters

Damon Monolithic Filters utilize a single quartz plate for multiple resonators and the coupling medium between them. Advantages over conventional crystal filters include smaller size, superior stability, and lower cost. Available in a wide variety of computer-assisted designs from Chebyshev to Gaussian characteristics and from 2 to 8 poles.



MONOLITHIC CHARACTERISTICS:

Center Frequency ..... 2.5 - 30 MHz
3 dB Bandwidth ..... 0.3 - 30 KHz
No. of Coupled Resonators ..... 2 - 6
Insertion Loss ..... 1 - 6 dB
Ripple ..... 0.5 dB Max.
Terminations .. 50 Ohms to 20 Kohms
Size ..... TO-5, TO-8, or Flat-Pack

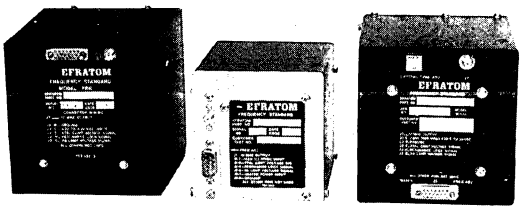
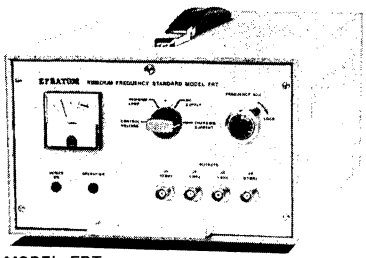
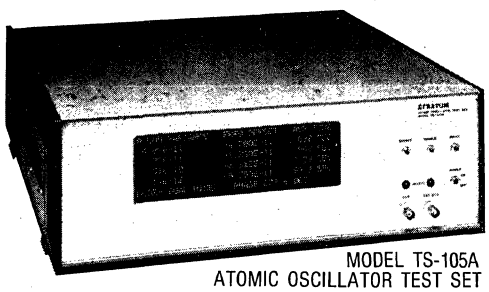
RUBIDIUM OSCILLATORS



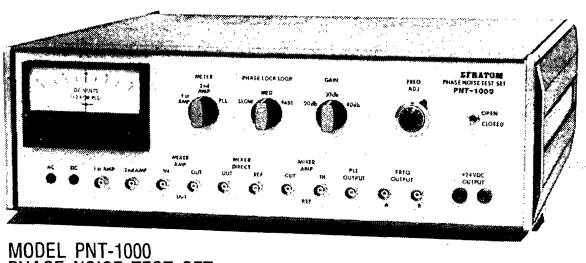
FRK M-1000 M-100



MODEL FRT
RUBIDIUM FREQUENCY STANDARD



MODEL TS-105A
ATOMIC OSCILLATOR TEST SET



MODEL PNT-1000
PHASE NOISE TEST SET

EFRATOM is the recognized world leader in precision time and frequency systems for military/aerospace and commercial applications. Utilizing state-of-the-art atomic oscillator technology, EFRATOM has conceived and developed a family of time and frequency references that find valuable application in navigation, communications and laboratory environments. The ever increasing demands for precision time base hardware to perform in the harsh environments of space, military theatres and mobile communication platforms, have provided the impetus for the development of EFRATOM's range of atomic oscillators and time base generators.

EFRATOM's Model M-1000 is the world's smallest atomic oscillator measuring just 3.25in x 3.25in x 4.5in (83mm x 83mm x 114mm), yet this instrument provides long term stability performance of better than 1 x 10^{-11}/month. Developed specifically for military use, the Model M-100 and M-1000 rubidium oscillators offer unparalleled performance in the toughest of airborne and ground environment including radiation, EMI, and high G conditions.

Complimentary to its range of precision oscillators EFRATOM offers the Model FRT ultra-stable atomic frequency standard for laboratory and field calibration of time and frequency references. More recently, EFRATOM introduced its' Atomic Oscillator Test Set Model TS-105A which provides for fast and accurate determination of frequency stability (Allan Variance), frequency offset and phase measurement of atomic and high performance crystal oscillators.

EFRATOM's scientists are currently working in conjunction with NBS in the development of a Compact Passive Hydrogen Maser for commercial production. They are also actively engaged in research and development of a future generation of laboratory and mobile time and frequency standards.

GENERAL

Electronic Research Company Model ER8001 is a Precision Ovenized Crystal Oscillator utilizing a 5MHz third overtone crystal manufactured by E.R.C. Model ER8002 uses the same crystal except the output frequency is multiplied to 10MHz. These oscillators are ideal for applications where a precision time base is to be multiplied or synthesized requiring a low phase noise source.

SPECIFICATIONS

Output Frequency: Model ER8001, 5MHz; Model ER8002, 10MHz
Output Level: 1Vrms Minimum into a 50 ohm load
Waveform: Sine-Wave
Harmonic Distortion: 40dB below rated output
Frequency Adjustment: ±2.5PPM Min. course mechanical; ±2.0 x 10^{-7} Min. fine mechanical; ±1.0PPM Min. electrical option 3 only; By D.C. Voltage (−10 to +10V)
Input Voltage: +12VDC ±10%, Current at Turn-on 340MA Max. Note input terminals No. 2 & 4 may be connected together externally.
Frequency Stability vs. Input: ±3 x 10^{-9} for a ±10% change in input
Frequency Stability vs. Load: ±1 x 10^{-9} for a ±10% change in load
Frequency Stability vs. Temperature: ±5 x 10^{-9} from −20°C to +65°C ambient
Warm-up Time: 1 x 10^{-7} in 15 Min.; ±1 x 10^{-8} in 20 Min.
Aging Rate: 1 x 10^{-9}/24 hours, after 72 hours on time
Short Term: 3 x 10^{-11} RMS for one second averaging time
Retrace: ±1 x 10^{-8} after 60 Min. warm-up following a 24 hour off time
Input Power: At turn-on 340MA — After warm-up operating at +25°C 135MA, After warm-up operating at −20°C 225MA
Frequency Stability vs. Orientation: 1.5 x 10^{-9} worst case
Size: Model ER8001 and Model ER8003 2″ x 2″ x 4″ H
Model ER8005 2.25″ x 2.25″ x 4.25″ H

Options: Many options are available to interface with your requirements

Electronic Research Company Series 8000 precision ovenized crystal oscillators are the ultimate choice where proven reliability and frequency stability is required. These oscillators are ideal for applications where a precision time base is to be multiplied or synthesized requiring a low phase noise source. All Electronic Research Company's oscillators utilize quartz crystals manufactured by ERC for maximum control on all parameters to insure performance specifications. If your application requires superior oscillator performance call us or write for our complimentary catalogue.

QUARTZ CRYSTALS/TCXO/VCXO/OVENIZED OSCILLATORS

FREQUENCY CONTROL PRODUCTS

MODEL ER6001

GENERAL

Temperature Compensated Crystal Oscillator, Model ER-6001 is used in applications requiring low power and minimum seated height for printed circuit board mounting. Improved long term aging is achieved by using a 10MHz cold-weld crystal manufactured by E.R.C. A wide variety of options are available for applications requiring different specifications.

SPECIFICATIONS

Output Frequency: 10.00 MHz
Output Level: TTL, 10 Loads
Output Waveform: Square Wave
Duty Cycle: 50% ±10%
Rise Time-Fall Time: 15 ns Maximum
"0" Level: .5V Maximum
"1" Level: 3V Minimum
Input Voltage: +5VDC ±10%
Input Current: 18mA @ +5.5V
Frequency Stability vs. Input Voltage: $\pm 1 \times 10^{-7}$
Frequency Stability vs. Load: $\pm 1 \times 10^{-7}$
Frequency Stability vs. Temperature: $\pm 1 \times 10^{-6}$ from 0°C to +60°C Ambient
Aging: Long Term 1×10^{-6}/Year
Short Term 1×10^{-8}/24 Hours
Frequency Adjustment: Sufficient for 10 years of aging

OPTIONS AVAILABLE

Output Waveform: Sine-Wave
Input Voltage: ±12VDC, +12VDC, +15VDC, +27VDC
Frequency Stability vs. Temperature:

Ambient Temperature	Frequency Stability
0°C to +55°C	± 3PPM
0°C to +70°C	± 1PPM
0°C to +70°C	±.5PPM
−30°C to +75°C	± 1PPM
−55°C to +105°C	± 1PPM

Frequency Range: 1Hz to 150MHz
Technical specifications are subject to change without notice.

2	OUTPUT
3	+Vcc
4	−Vcc, RF GND

MODEL ER6002

GENERAL

Model ER6002 is a Temperature Compensated Crystal Oscillator which is available at any frequency from 1Hz to 15MHz. By using a precision cold-weld crystal manufactured by ERC, improved long-term aging is realized. Applications are where reliable performance is required over a wide temperature range.

SPECIFICATIONS

Output Frequency: Data applicable for frequencies from 3.2MHz to 15MHz
Output Level: Square wave, TTL compatible
Duty Cycle: 50% ±10%
Amplitude: Logic "0" 0.5V Max., Logic "1" 2.5V Min.
Rise-Time/Fall-Time: 15NS Maximum, Typical 10NS @ 6MHz
Load: 10 TTL Loads
Input Voltage: +15VDC ±5%, +5VDC ±5%
Current: +15VDC Supply 10MA, +5VDC Supply 20MA
Adjustment: Sufficient for 10 years of aging
Stability as a Function of Temperature: ±1PPM over a ambient temperature range −40°C to +70°C
Stability as a Function of Input: ±0.5PPM for ±5% voltage change
Stability as a Function of Time: 1PPM per year

ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −40° to +70°C
Storage Temperature: −55°C to +125°C
Altitude: To 70,000 feet
Shock: MIL-STD-202E, Method 213, Test Condition G
Vibration: MIL-STD-202F, Method 211, Test Condition A
Terminal Strength: MIL-STD-202F, Method 211, Test Condition A

OPTIONS AVAILABLE

Output Waveform: Sine-Wave
Input Voltage: ±15VDC, +12VDC, +27VDC, +5VDC
Frequency Range: 1Hz to 15MHz
Temperature: −55°C to +105°C
Technical specifications are subject to change without notice.

MODEL ER6004

SPECIFICATIONS

Temperature Stability: ±1.0PPM 0°C to +55°C
Frequency: 5MHz or 10MHz are standard. Any frequency 50Hz to 20MHz available.
Output Level: TTL Standard, CMOS and Sine optional
Supply Voltage: +5VDC ±5% at 15mA typical
Aging Rate: 1PPM per year typical
Stability vs. Supply: ±0.2PPM typical
Rise/Fall Time: Less than 20 μsec.
Frequency Adjustment: ±5PPM Min.

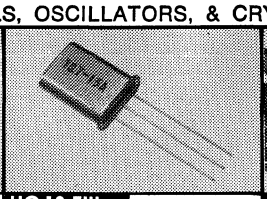
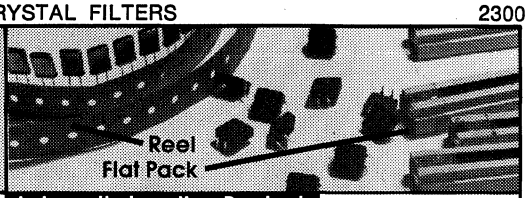
FOX ELECTRONICS

Clock Oscillator



HC-18 Filter



Automatic Insertion Products

Quartz Crystals

Fox offers the broadest line of crystal products in the industry: from standard products to volume automatic insertion to miniature crystals.

We carry a large stock of standard and special frequencies and feature fast delivery for large or small quantity orders. Our Distributors in your area also carry stock.

Fox also offers standard and custom holders in solder seal, resistance weld and cold weld. Send your drawings/specifications or call our Customer Service Department for assistance.

We are committed to give our customers a quality product at a competitive price, backed by excellent service.

WITH FOX, YOU GET THE BEST IN QUARTZ.

Automatic Insertion

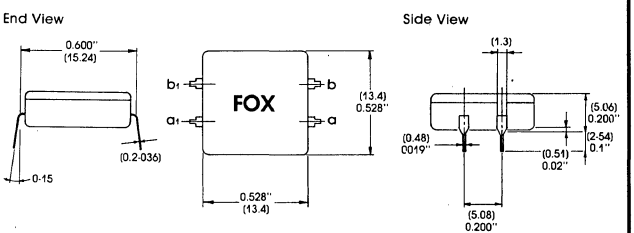
Flat Pack

The FX-1 series line of low cost crystals feature a molded plastic package with dual in-line pin spacing for automatic insertion. The FX-1 utilizes a special crystal technology in crystal packaging while maintaining the FOX quality.

The standard plastic tube houses 25 crystals ready for insertion.

Frequency range ± 3.5 MHz to 15 MHz
Frequency tolerance ± 700ppm @ 25°C
Standard load capacitance 16pf
Operating temperature range – 10 to +60@C

Package Dimensions



Tape and Reel

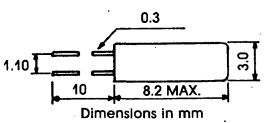
The Fox Tape and Reel crystals are the industry's First line of automatically insertable HC18 crystals for large volume applications.

Available in standard 12 inch reels with .200" pin spacing and up to 1500 crystals per reel of frequencies from 1MHz to 175MHz.

Miniatures

The Fox line of miniature crystals provides the designer with the ultimate in size, performance and economic trade offs. Featured are tuning fork and "AT" cut crystals packaged in a tubular cold weld metal design that features low power, long term stability, tight tolerances and low resistance.

Dimensions



Electrical Specifications

	Part No.	Frequency
Low Frequency tuning forks	NC 38S —	16 KHz-163 KHz
Frequency stability		± 30 PPM
Watch crystal	NC 38 —	32.768 KHz
Frequency stability		± 20 PPM
High Frequency "AT" Cut	FX-3	4.19 MHz-18.0 MHz
Frequency stability		± 30 PPM

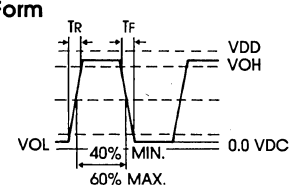
Dip Crystal

Crystal Clock Oscillators

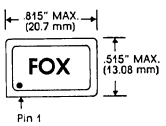
Fox Oscillators feature a high quality metal welded package that offers a hermetic seal to provide excellent resistance to extremes of heat/humidity. With pin 7 case ground, the metal package also includes shielding to minimize RF radiation, helping to meet FCC emit EMI specifications. The Fox Oscillators can be soldered in standard wave line operations without damage. High insulated stand-offs permit good de-fluxing.

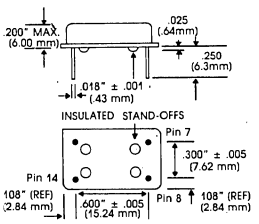
The Fox Oscillators include state of the art thick film hybrid devices for generating TTL, CMOS and special output characteristics.

Output Wave Form



Package Dimensions





(TTL) F1100 Series

Fox TTL Oscillators use standard +5V dc input and drives up to 10 TTL loads. Fox offers product line of stabilities, tailored for your specific needs and designed to be cost effective.

The F1100 series is interchangeable with Motorola K1100 AM and similar models.

Electrical Specifications

Freq. Range:	250 KHz -80 MHz
Freq. Stability:	±0.001- 1.00% over optg. temp. & voltage
Optg. Temp. Range:	0 to +70°C
Input Voltage:	+5 VDC ± 0.5 V
TTL Output:	
Symmetry:	60/40 to 40/60 @ 1.4 VDC Level
Rise & Fall Times:	15 ns Max. for 250 kHz to 25 MHz, 7 ns Max. for 25 MHz to 60 MHz
"O" Level:	+0.4 Volts
"I" Level:	+2.4 Volts
Output Load:	1 to 10 TTL gates

Standard Product Line

Model	Stability	Frequency	Remarks
F1100	± .01%	.250-80 MHz	TTL Clock
F1114	± .05%	.250-80 MHz	TTL Clock
F1115	± .10%	.250-80 MHz	TTL Clock
F1116	±1.0 %	.250-80 MHz	Economy Clock
F1142	± .001%	.250-80 MHz	Precision Clock
F1144	± .0025%	.250-80 MHz	Precision Clock
F1145	± .005%	.250-80 MHz	Precision Clock
F1158	± .01%	.250-80 MHz	Extended Temp.

Standard TTL Frequencies (Available from stock)

Freq. (MHz)	Freq. (MHz)
1.0000	10.0000
1.8432	12.0000
2.0000	16.0000
2.4576	18.4320
4.0000	19.6608
5.0000	20.0000
5.0688	22.1184
6.0000	24.0000
6.1440	32.0000
8.0000	40.0000

(CMOS) F1152 Series

Fox CMOS Oscillators generate a compatible output at any frequency specified from 25KHz to 12 MHz. The extremely low power consumption makes it perfect for driving CMOS MPU's or where battery backup is required. As with all CMOS circuits, power consumption and frequency range are dependent upon the selected input voltage.

The CMOS compatible output uses +5Vdc to +15Vdc.

Specifications

Frequency Range: 25 KHz -12.000 MHz

Frequency Stability: +0.01% (Inclusive of calibration tolerance at 25°C, operating temperature range, input voltage change, load change, aging, shock, and vibration.)

Temperature Range: Operating: 0°C to 70°C
Storage: −55°C to +125°C

Input Voltage: +5V to +15V dc

Input Current:	+5V	+10V	+15V
25kHz—3.199 MHz	2.5 mA	6 mA	14 mA
3.200—6.499 MHz	2 mA	6 mA	14 mA
6.500—8.999 MHz		9 mA	17 mA
9.000—12.000 MHz			18 mA

Output:

Symmetry:	40/60% to 60/40% (CL = 15 pF @ VO = ½ Vdd)		
"1" Source Current:	120 mA		
"0" Sink Current:	360 mA		
	+5V	+10V	+15V
VOH (Logic "1") min.	4.5	9.0	13.5
VOL (Logic "0") max.	.5	1.0	1.5
RISE & FALL TIMES (10% to 90% VOD CL = 15 pF)	100 ns	55 ns	35 ns

Mil Equivalent F-550 Series

Fox offers a commercial equivalent to mil. 0-55310. If your oscillator needs match those of a mil spec in general parameters, but your application does not demand the exhaustive testing and administration, you can order a mil equivalent Fox oscillator. The Fox mil equivalent oscillator is designed to meet the mil spec. Marking will be standard commercial marking.

Clock Oscillators

SOME **FCP** SPECIALS

Microprocessor Crystals. Over 50 standard models for the frequencies from 1 to 48 MHz cover the most widely used microprocessors, clocks and ICs. All available in Coldweld HC-18 cans, some also in HC-33.

Crystals for Filters and Oscillators. Matched sets and high stability.

High Qs. Better than 1×10^6 in some ranges, also spurious mode suppressions from 20 to 65dB.

Special Environments. High shock and radiation hardened.

Small Packages. 10 MHz in TO-5 (HC-35/U) can, .700 to 1.5 MHz in .215" high HC-18 coldweld.

Clock Oscillators. Feature crystal stability, printed circuit board on dual in-line mounting and outputs directly compatible with DTL or TTL loads. Full line—Military and Industrial Clock Oscillators.

For more than 25 years **FCP** has been a major supplier of crystals for MIL Spec, general industrial and special applications. A wide variety of packages are available in coldweld and solder seal. Strong on engineering as well as production, Frequency Control Products can often be of assistance to the circuit designer.

FREQUENCY CONTROL PRODUCTS, INC.

Oscillators / CRYSTAL and FORK

FCP is unique among oscillator suppliers in that it has complete in-house capability for the production of all types of oscillator packages, TCXOs, PCOXOs and XOs. We make our own crystals and tuning forks. We have a large foundation of standard models to draw on and can respond speedily with custom units to fit precise specifications. NOTE! FOR CLOCK OSCILLATORS, SEE OUR AD UNDER CRYSTALS.

XOs—Crystal and Fork Oscillators, not Temperature Compensated

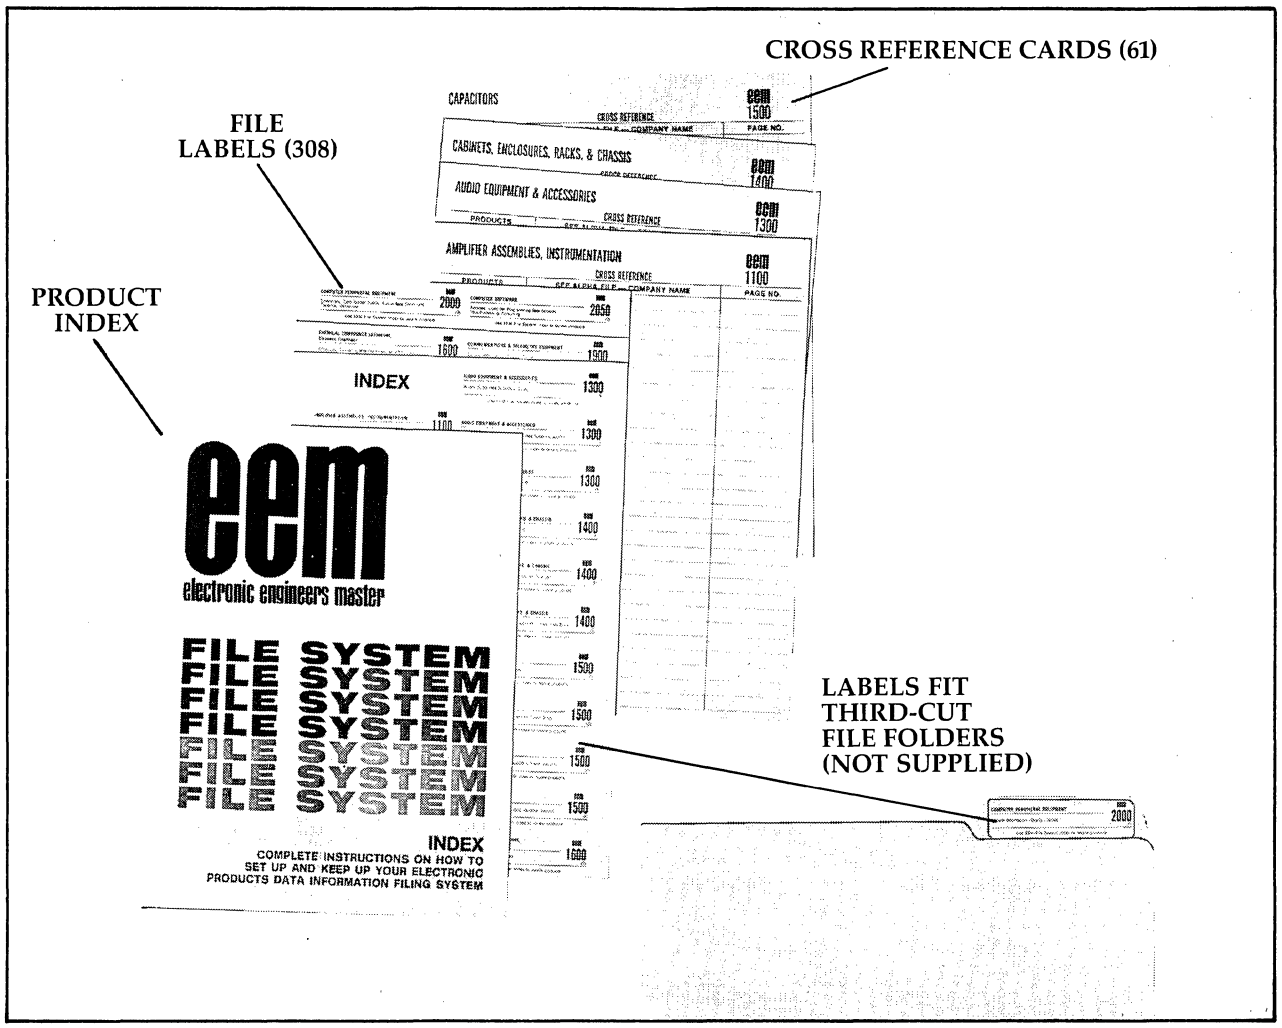
that pertain to your needs.



WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

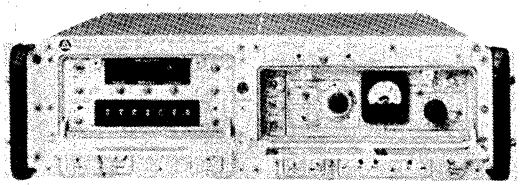
Frequency Electronics' capability is from the basic quartz crystal to complete time and frequency systems.

Timekeeper for Outer Space... Ask anyone who knows anything about this nation's deep space probe and satellite programs to mention any 10. Our instruments or equipment are aboard at least 8.

Cesium Beam Primary Frequency Standards.

Models FE-5450A (TD-1335/V)
FE-5440A (TD-1251/U)

High Reliability, Militarized Cesium Beam Frequency Standards for aerospace, shipboard, laboratory and mobile applications.



Frequency Distribution Systems

Models FE-798A/FE-799A

A militarized, high reliability RF distribution system for satellite ground stations and shipboard, mobile, and laboratory applications.

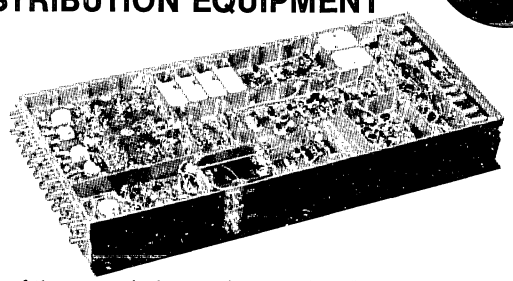
SATELLITE FREQUENCY GENERATION AND DISTRIBUTION EQUIPMENT



State-of-the-art techniques pioneered by FEI for frequency synthesis, processing, and distribution of low noise reference signals have been applied to the development of high reliability hardware for satellite applications. FEI systems consisting of precision oscillators and distribution equipment configured as redundant assemblies are presently being used on a wide variety of space programs resulting in performance capabilities previously unrealizable. The equipment incorporates FEI's high reliability hybrid techniques and results in light weight and low power consumption; considerations of primary importance in satellite applications.

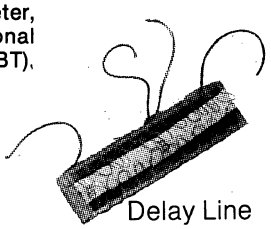
Filters and Networks

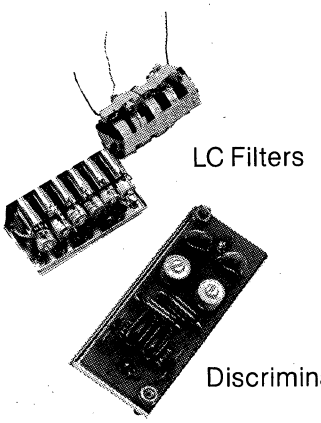
LC Filters • Crystal Filters Delay Lines • Discriminators from FSN FREQUENCY SELECTIVE NETWORKS, INC.

FSN is a filter and network house. We are strong in engineering. We are able and willing to work with system designers to apply state-of-the-art filter technology to optimize not just the filter but the application of filters to help our customers optimize their systems.

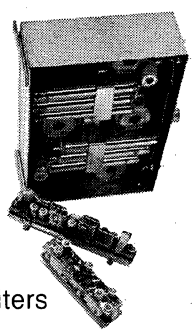
Use us as your filter specialist. We are knowledgeable in and have experience with all classes of filters, whether crystal or LC. We can select the proper type for best performance while optimizing the cost-vs-performance trade-off. We design and manufacture **all** the families such as: Butterworth, Chebyshev, Legendre, Cauer (elliptical), General Parameter, Gaussian, Bessel, Transitional Butterworth-Thompson (TBT), Bode, Lerner and others.

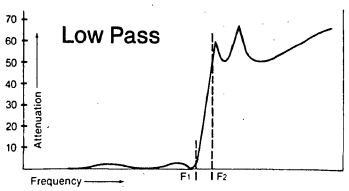
We also design and manufacture such other networks as delay lines, attenuators, phase and delay equalizers, discriminators, matching networks, etc.



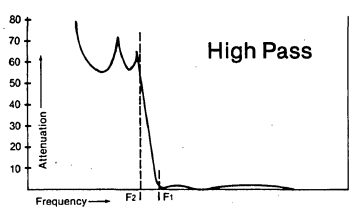


Representative Network Packages

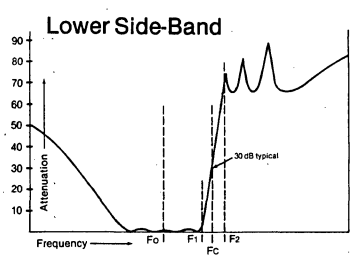




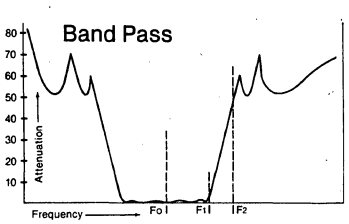
Shape Factor = $\frac{F_2}{F_1}$ As Low as 1.03



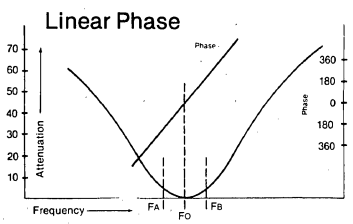
Shape Factor = $\frac{F_1}{F_2}$ As Low as 1.03



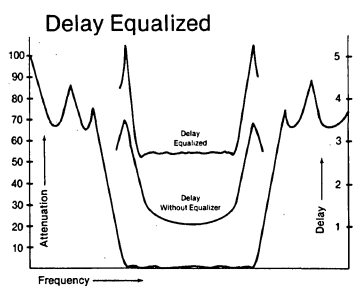
Shape Factor = $\frac{F_2 - F_o}{F_1 - F_o}$ As Low as 1.05



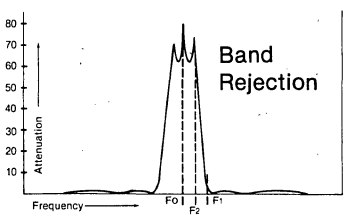
Shape Factor = $\frac{F_2 - F_o}{F_1 - F_o}$ As Low as 1.05



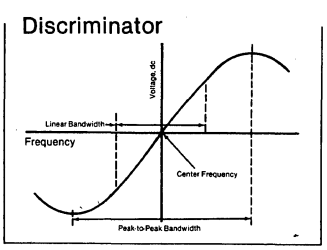
Phase Linearity better than 1°



Shape Factors better than 1.10
Delay Variation better than 2%



Shape Factor = $\frac{F_1 - F_o}{F_2 - F_o}$ As Low as 1.20



Wide and Narrow Band Linearity ± 1%

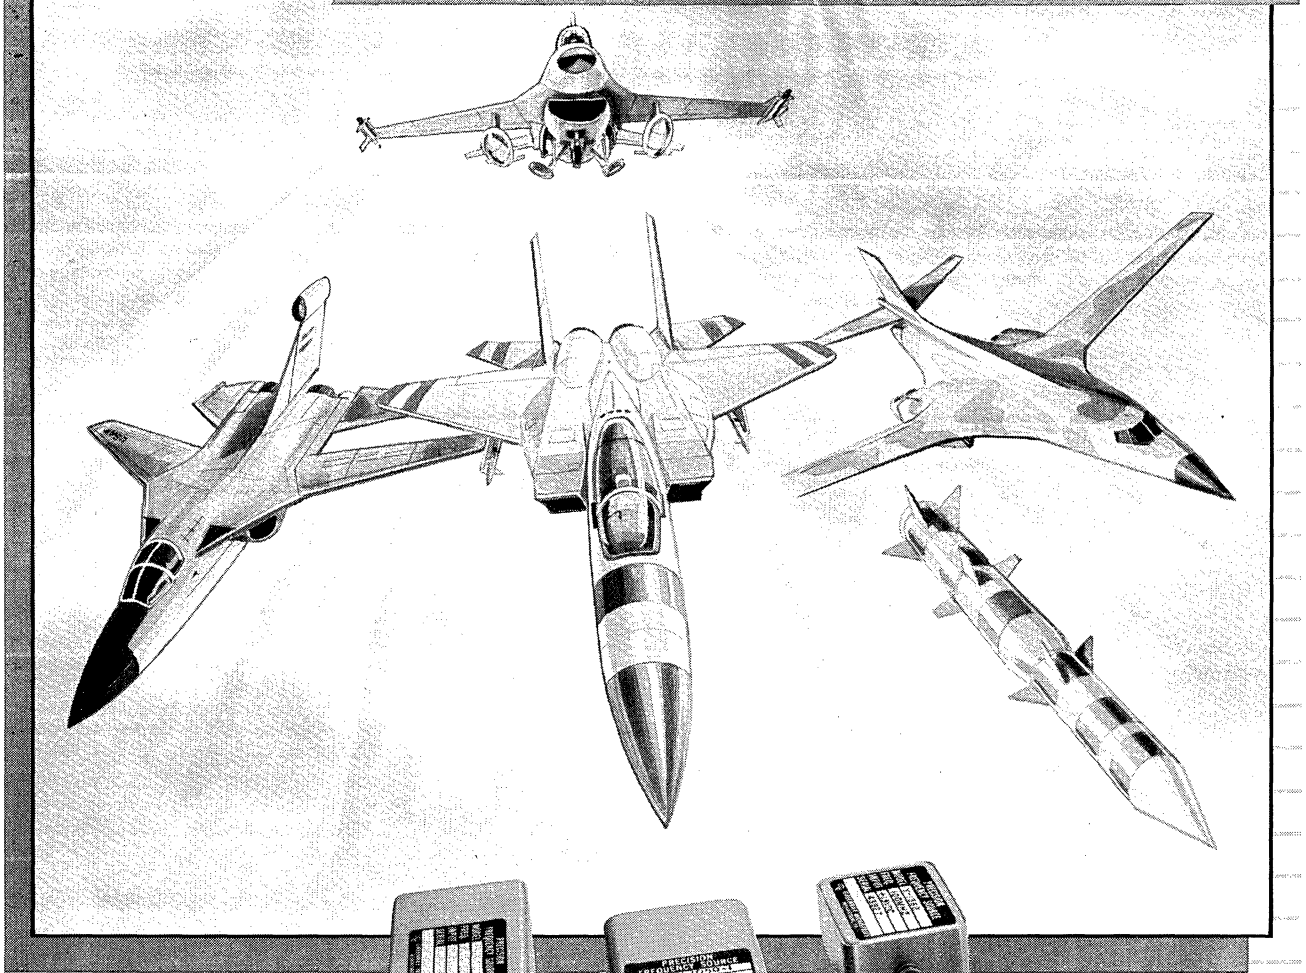
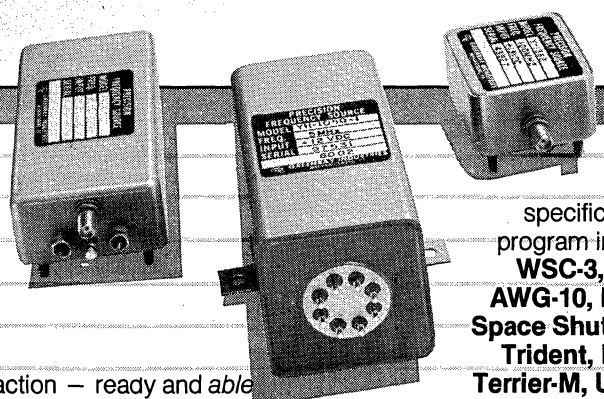
GREENRAY OSCILLATORS

RESPONSIVE TO YOUR NEEDS FOR OVER 20 YEARS





HIGH TECHNOLOGY OSCILLATORS

- **Crystal Oscillators**
- **Voltage Controlled Oscillators**
- **Frequency Standards**
- **Temperature Compensated Oscillators**
- **.01 Hz to 2000 Hz**

At Greenray we're ready for action – ready and *able* to solve all of your oscillator problems...and we'll go to any length to prove it. Whatever your program – military, industrial or commercial – our Application and Engineering Design Teams will develop and build custom oscillators to meet *your* specialized needs... we've been doing just that for over 20 years.

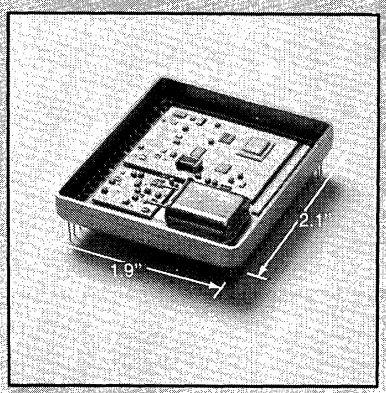
But there's more to Greenray than custom designs; we also have the broadest line of standard, high quality oscillators with guaranteed specifications and significant major program involvement, eg., **GRC-144, WSC-3, ALQ-99, ALQ-119, F-111, AWG-10, Patriot, Pershing, Apollo, Space Shuttle, Sparrow, Cutty-Sark, Trident, Landsat D, AYK-14, B-1B, Terrier-M, USM-464, TRC-97, MK-86, F-15, F-16.**

Plus, our comprehensive quality program per MIL-I-45208A and MIL-STD-45662 yields reliable performance. And we assist you both before and after delivery.

We're here to meet your specific needs...call or write for our new catalog or send us your requirements and request a quotation. 840 W. Church Rd., Mechanicsburg, Pa. 17055 Telephone 717-766-0223

GREENRAY Industries, Inc.

Hughes Custom Hybrid Oscillators



Digitally Compensated Crystal Oscillators

For portable or remote equipment requiring low power and high stability, the Hughes Digitally Compensated Crystal Oscillator (DCXO) provides the following advantages over conventional ovenized oscillators:

- lower power (less than 250 mW)
- faster warm-up time (less than 250m sec.)
- smaller size (1 cubic inch)
- remote synchronization capability

In addition, the compensation data is stored in an Electrically Erasable Programmable Read-Only-Memory (EEPROM) which allows the DCXO to be recompensated or programmed a number of times.

Features

Frequencies available: 1 to 30 MHz
Frequency stability:
±0.20 ppm, −45 to +85°C
±0.08 ppm, 0 to + 70°C
Low power dissipation: 250 mW
Power supply: +5 and −5V$_{DC}$
Small package: 1 cubic inch
Low aging rate
Thin-film hybrid construction
MIL STD 883B screening available

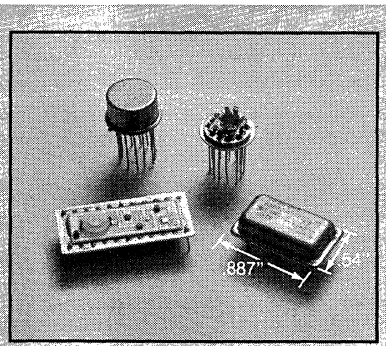
Custom Design Options

Output logic options: TTL, CMOS, ECL
Package Options: Various
Supply voltage: Single 5 volt supply
Other voltage levels
Digital Frequency Adjustment for aging correction or for system synchronization.
Temperate range: −55 to +125°C
Stability: Optimized for specified temperature range

For other design variations contact Hughes Solid State Products.

Electrical Specification

PARAMETER	CONDITIONS	MIN	TYPICAL	MAX	UNITS
Temperature Stability HXO-356-001	−45 to 85°C		0.16	0.20	ppm
HXO-356-002	0 to + 70°C		0.05	0.08	ppm
Short-Term Stability	1 sec average		.01		ppm
Long-Term Stability	1 year average		1.00		ppm
Frequency Shift due to voltage variation	both supplies +/−10%		.10		ppm
Frequency Shift due to load variation	1-10 LSTTL loads		.10		ppm
Waveform Symmetry		45	.50	.55	%
Rise/Fall Time			.10	.20	nsec
Fanout		1		.10	LSTTL loads
Warm-up Time			1.00		msec
Power Consumption			2.50		mW



Hybrid Oscillators

Hughes Hybrid Oscillators are available in a variety of packaging options including: TO-8, DIP, Flatpack and leadless chip carriers. MIL STD 883B screening is available on all hybrid oscillators.

OUTPUT	TTL	CMOS	ECL
Frequency Range:	1Hz to 100MHz	0.1Hz to 10MHz	1MHz to 100MHz

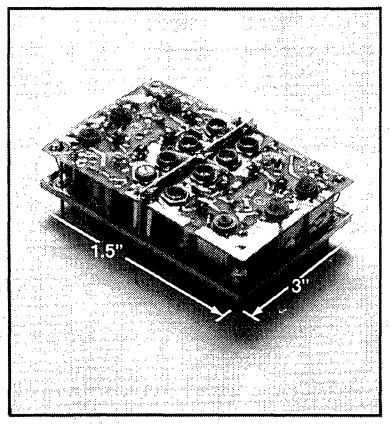
Hughes Custom Oscillators & Filters



Crystal Filters

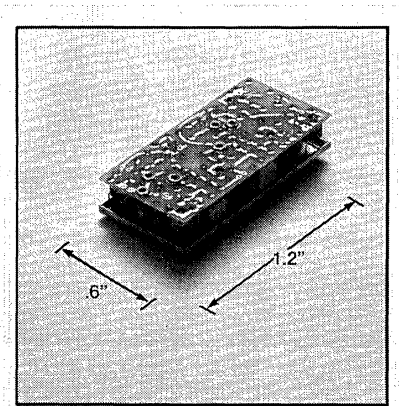
Hughes has over 20 years of experience with all standard types of bandpass filters, including Butterworth, Chebychev, Elliptical, Gaussian and Bessel types, as well as band reject filters and crystal discriminators.

Characteristics

Hughes filters are designed using advanced computer-aided network synthesis and analysis techniques resulting in filters with sharp selectivity, controlled group delay or phase response, non-ringing pulse response and low insertion loss over broad temperature ranges. Hughes has also developed proprietary designs which permit tight control of phase and group delay characteristics or time domain response characteristics such as peak overshoot and ringing in response to pulsed RF signals. Hughes Frequency Control Devices meet the most stringent military standards, when required.

Applications

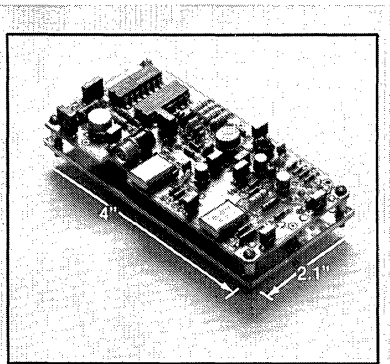
Hughes Frequency Control Devices are in use in satellites, radar systems, missiles, military and commercial communications and avionics systems.



TCXOs

Hughes Temperature Compensated Crystal Oscillators (TCXOs) are designed using computer-aided techniques. Performance is insured with automated component test and selection and fully automated testing of the finished product.

OUTPUT	SINE	TTL	CMOS	ECL
Frequency Range:	100Hz to 60MHz	1Hz to 100MHz	0.1 Hz to 10MHz	1 MHz to 100MHz
Temperature Range:		−55 to +125°C		
Short Term Stability:		$\pm 1ppl0^{8}$/sec		
Long Term Stability:		$\pm 1ppl0^{6}$/year		
Frequency Stability:		$\pm 5ppl0^{7}$/(−40 to +85°C)		
		$\pm 1ppl0^{6}$(−55 to +85°C)		
		$\pm 5ppl0^{6}$(−55 to +125°C)		
Supply Voltage:		Any supply voltage 5-27 VDC available		
Size:		As small as 1"xl"x0.5"		
		Smaller hybrid versions available		



VCXOs

Hughes Voltage Controlled Crystal Oscillators (VCXOs) are noted for their exceptionally low frequency drift characteristics. Frequency deviations of up to ±0.3% of the nominal oscillator frequency are available.

OUTPUT	SINE/TTL
Frequency Range:	100 Hz to 100 MHz
Temperature Range:	0 to +70°C
Deviation:	± .3%
Linearity:	± 1% of max deviation
Modulation Frequency:	DC to 0.2 MHz
Spurious:	−80 dbc
Supply voltage:	10-27VDC available
Size:	As small as 2"x 2"x .5"
	Smaller hybrid versions available

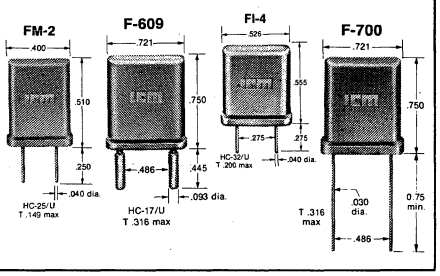
International CUSTOM CRYSTALS



LOW FREQUENCY CRYSTALS 70 KHz - 999.9 KHz

Frequency Range/Mode of Vibration
70-200 KHz Length Shear Fund.
200-599 KHz Edge Shear Fund.
600-999 KHz Shear Fund. AT Cut

Shunt Capacitance (Co) 7 pf Max.

Resistance (Measured at Series Resonance)
70-200 KHz 10,000 to 7,000 Ohms Max.
200-500 KHz 7,000 to 1,100 Ohms Max.
500-999 KHz 1,100 to 550 Ohms Max.

Drive Level
70-499 KHz 2 Milliwatts Max.
500-999 KHz 10 Milliwatts Max.

Holders
F-605, F-609, F-700 specify lead length. F-13 fq. below 150 KHz in F-13 holder only. Note: Solder Seal or Cold Weld Sealing Method. Crystals can be supplied for oven or nonoven use.

FREQUENCY	General Purpose	Commercial Standard
	Calibration Tolerance	Calibration Tolerance
70-99.9 KHz	within ± .02%	*within ± .01%
100-499.9 KHz	within ± .02%	within ± .01%
500-599.9 KHz	within ± .02%	within ± .01%
600-849.9 KHz	within ± .02%	**within ± .0025%
850-999.9 KHz	within ± .02%	within ± .0025%

*Below 600 KHz within ± .01% ** Above 600 KHz within ± .0025%

MEDIUM FREQUENCY CRYSTALS 1 MHz - 30 MHz

Frequency Range/Mode of Vibration
1-30.0 MHz Shear Fundamental AT Cut

Resistance (Measured at Series Resonance)
1.0-1.49 MHz 490 Ohms Max.
1.5-1.99 MHz 375 Ohms Max.
2.0-2.99 MHz 270 Ohms Max.
3.0-3.99 MHz 150 Ohms Max.
4.0-5.09 MHz 75 to 33 Ohms Max.
5.1-30.0 MHz 22 to 16 Ohms Max.

Drive Level
1.0- 9.99 MHz 10 Milliwatts Max.
10.0-22.00 MHz 5 Milliwatts Max.
22.0-30.00 MHz 1 Milliwatt Max.

Shunt Capacitance (Co) 9 pf Max.

Holders
F-605, F-605-SL available 2.0 MHz and above only. F-609, F-700 specify lead length. FI-4 available 4.0 MHz and above only. FM-1, FM-2 supplied standard above 6.0 MHz. 4.0 to 6.0 MHz can be supplied at additional cost. HA available 2.0 MHz and above only. Ground leads can be supplied at additional cost. Note: Solder Seal or Cold Weld Sealing Method. Crystals can be supplied for oven or nonoven use.

FREQUENCY	General Purpose	Commercial Standard		High Accuracy	
	Calibration Tolerance	Calibration Tolerance		Calibration Tolerance	
		CS	CS-1	HA	HA-5*
1.0-1.49 MHz Fund.	within ±.01%	within ±.0025%	within ±.001%	NA	NA

* HA-5 will maintain within .0005% of 25°C measured frequency, from −10°C to +60°C

WHEN ORDERING — Specify the Following for Each Crystal
A. Crystal frequency
B. Type — GP, CS, or HA
C. Calibration tolerance —..0025% or .001% as specified for (CS) and (CS-1). Not required for GP as this type is supplied only in .01%
D. Calibration temperature — Calibration temperature to be specified by customer.
E. Holder (see above)
F. Circuit load and correlation data — Customer to give oscillator load and correlation data. Do not specify equipment types for GP crystals.

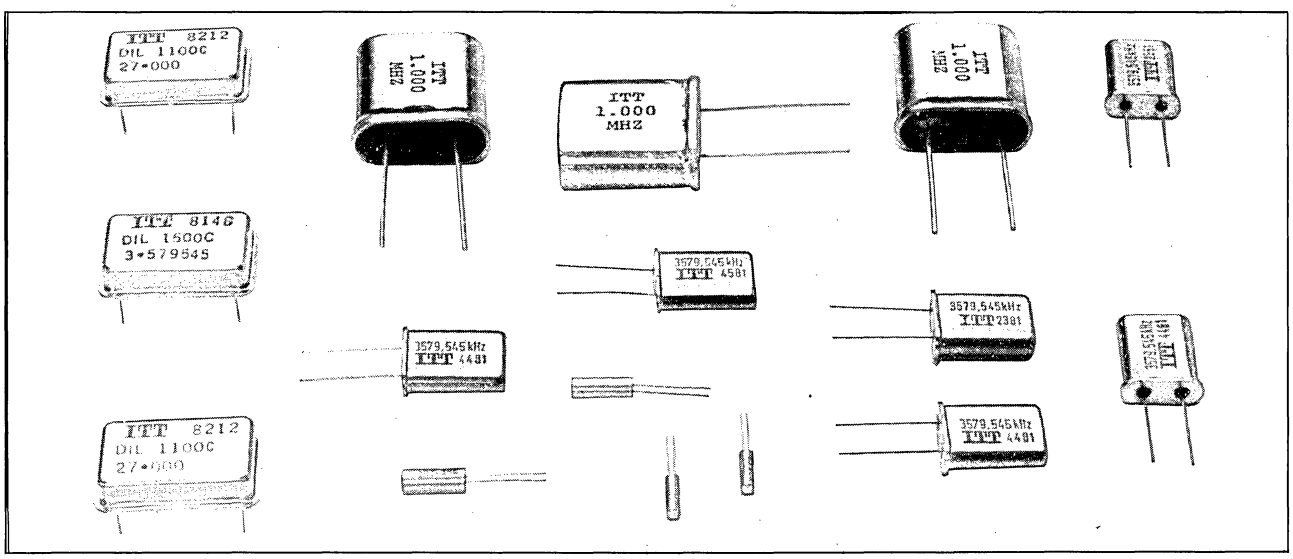
ITT Components

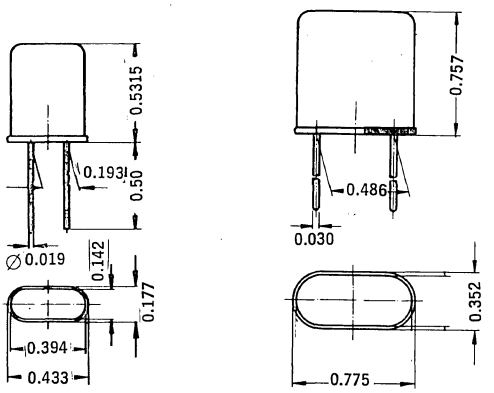
A Unit of International Telephone and Telegraph Corporation

Crystals and Oscillators



Quartz Crystal Units

- Microprocessor clock type crystals covering a frequency spectrum from 1MHz to 200MHz.
- HC18 and HC33 type holders, resistance welded or solder cold weld or solder sealed.
- Frequency tolerance from .002% to .35%.

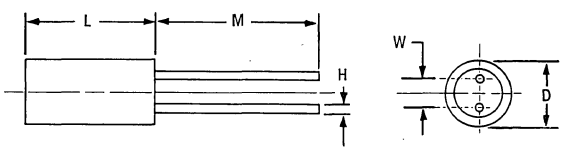


HC-18/U HC-33/U

ITT TF3 AND TF6

Tuning Fork Crystals

Used for microprocessors and micro computer real-time clock applications.



Type	L	M	H	W	D
TF3	.327 Max. (8.30 Max.)	.354 (9.00)	.012 ±.002 (0.30 ±0.05)	.043 ±.002 (1.10 ±0.05)	.118 ± .008 (3.00 ±0.08)
TF6	.260 ±.002 (6.70 ±0.05)	.295 (7.50)	.010 ±.001 (0.25 ±0.03)	.023 ±.004 (0.70 ±0.10)	.081 ±.002 (2.05 ±0.05)

Dimensions are in inches (millimeters)

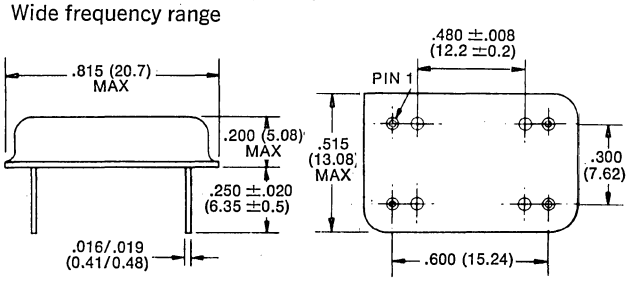
Quartz Crystal Oscillators

The ITT DIL oscillator series are miniature, low-profile, dual-in-line quartz crystal oscillators in a hermetic package. They are designed primarily, to meet the needs of the fast growing minicomputer and microprocessor markets, but are suitable for many other applications where a reliable, accurate clock input is required.

Frequency tolerances ranging from 1000ppm to 25ppm are available.

FEATURES

TTL compatible
Dual-in-Line pin spacing
Low profile — 5.8mm maximum seated height including insulating stand-offs
Hermetic welded metal package
Wide frequency range



Pin Connections
1 NC
7 Ground
8 Output
14 +5V

FREQUENCY RANGE: 250KHz — 90MHz

Family		Frequency	Tolerance
DIL 1000C		1000ppm	0.1%
DIL 1500C		500ppm	0.05%
DIL 1100C	SH1100	100ppm	0.01%
DIL 1050C	SH1050	50ppm	0.005%
DIL 1025C		25ppm	0.0025%

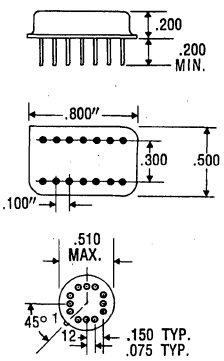
LEACH HYBRID FREQUENCY PRODUCTS

MILITARY • AEROSPACE • CUSTOM

ALL PRODUCTS MANUFACTURED IN THE U.S.A.

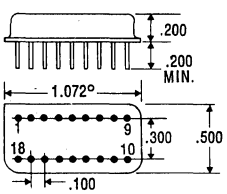
HYBRID OSCILLATORS
MIL-O-55310 PROCESSING



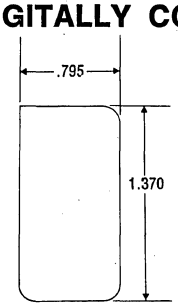
Output Waveform:	C-MOS, TTL/LSTTL, ECL, Sine Wave
Frequency Range:	.1 Hz-300 MHz
Packaging:	14 Pin D.I.P., Flat Packs, Leadless Carriers, TO5 and TO8
Typical Tolerance:	±10 ppm at R.T., ±50 ppm of R.T. from −55°C to +125°C
Typical Symmetry:	50/50% 1-30 MHz, 60/40% 31-300 MHz
Typical Processing:	883B, 38510, Burn In, Lot Traceable
Typical Testing:	Programmable Auto-Test Over Full Temperature Range With Data. All Units Serialized.
Environmental:	Gross/Fine Leak Detection, Centrifuge, Shock, Vibration, Acceleration and Radiation Exposure Available.

CRYSTAL CONTROLLED DUAL BAUD RATE GENERATOR
C5035 SERIES

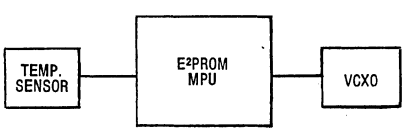
This Device Can Transmit and Receive Simultaneously on 2 Standard Baud Rates Which Are Manually or Soft Ware Selectable From 50 to 19,200 Baud. Fully Processed to MIL-O-55310, 38510 and 883B With Burn In Available. Packaged in 18 Pin D.I.P. or Flat Pack.



DCXO
DIGITALLY COMPENSATED XTAL OSCILLATOR

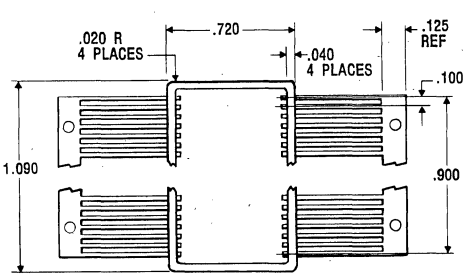


1 Hz to 60 MHz
±.3 ppm 0 to +70°C
±.5 ppm −40°C to +85°C
±1 ppm −55° to +125°C
±1 ppm/Year Aging
5 Volts ±10%
C-MOS, TTL, LSTTL
Flat Packs, Leadless Carriers and D.I.P. Packages



PRECISION TIMERS
CRYSTAL CONTROLLED GATE ARRAY TIMERS

Custom Gate Array Technology
Full MIL Temperature Range
±.01% to ±1% Accuracy
Crystal Controlled
Programmable Outputs
Hermetically Sealed
Flat Packs, Leadless Carriers and D.I.P. Packages



DIP CRYSTAL OSCILLATORS

The MF Guarantee

MF Electronics warrants each of its oscillators to be free from defects for one year from date of purchase.
Any oscillator found to be defective during this period may be returned to the factory, postage paid, for repair or, at our option, replacement without charge.
MF Electronics limits its liability to the repair and/or replacement of the returned MF oscillator.

MF ELECTRONICS CORP.
10 Renewal Place, New Rochelle, N.Y. • 10801 • (914) 576-6570

The Broadest line in the industry.

- Units use overtone crystals from 20 MHz to 65 MHz, very stable electrically and more reliable mechanically.
- All units guaranteed for one year to operate within specifications.
- Units specified at temperatures exceeding 0 to 70°C are individually recorded 100% for frequency vs temperature-insuring compliance.

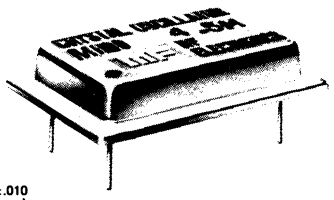
HYBRID TTL GUARANTEED CRYSTAL CLOCK OSCILLATORS • 250 KHz-50 MHz SERIES M1100

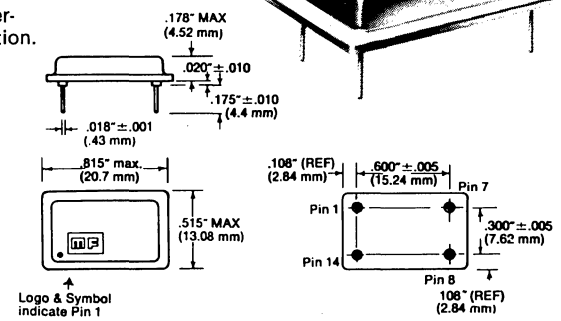
Frequency: Any specified frequency from **250 KHz** to **50MHz**
Frequency Stability: Including calibration at 25°C, operating temperature, change of input voltage, change of load, shock and vibration.

Series	Stability
M1100	± .01%
M1114	± .05%
M1115	± .10%
M1116	± 1.0 %
M1144	± .0025% (25 ppm)
M1145	± .0050% (50 ppm)
M1148	± .05% (economy)

Temperature: Operating 0 to 70°C
Storage −55 to +125°C
Input voltage: +5 ±.5 VDC
Input current: 60 ma., maximum, under all conditions
TTL output: All units, 0 to 70°C

Symmetry	60/40 @ 1.4 VDC
Rise and Fall time	6 ns. maximum from 0.5 to 2.4V
"O" Level	+0.5V, maximum
"I" Level	24V minimum
Loads	10 TTL Loads, standard or Shottky





HOW TO ORDER:
For Part Number... Add frequency to the Series M1100 thru M1145

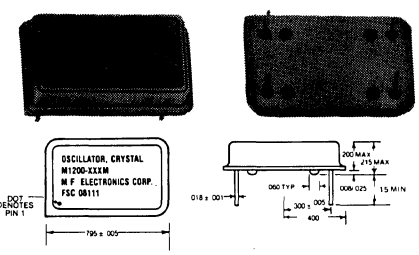
For example:
Series M1100, 01% 10 MHz frequency
M1100-10M

CRYSTAL CLOCK OSCILLATORS FOR MOS MICROPROCESSORS SERIES M1160, M1159

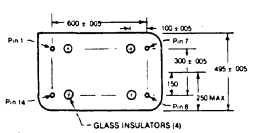
Same dimensions as M1100 Series above

- 4 MHz drives Z80A and Z8000, Mostek MK 3880-4, Sharp LH0080A, AMD AMz8000, NEC 780C-1
- 2 times TTL frequency on M1159-4 M
- MOS output drives 200 pf.
- Other frequencies available from 2 MHz thru 10 MHz

RESISTANCE-WELD CRYSTAL CLOCK OSCILLATORS • 250 KHz to 50 MHz IN ALL METAL CASE



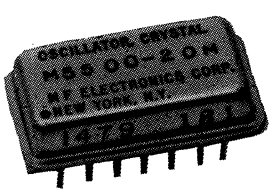
Series	Stability
M1200	± .01%
M1244	± .0025% (25 ppm)
M1245	± .0050% (50 ppm)

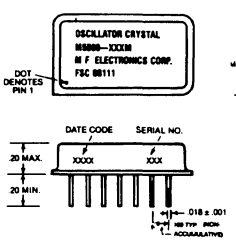


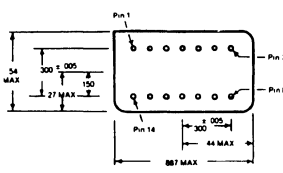
- All metal welded package with standoff insulator
- Area on PC board is one true TTL space—0.500" × 0.800" max.
- Seated height less than 0.215, including insulator
- Frequency from 250 KHz to 50 MHz
- TTL Compatible
- Stability options from .01% to .0025%
- Units at 4 MHz and higher are simple and reliable using the exclusive MF Clock-chip ™

Metal Package—Unit is hermetically sealed by resistance weld, with glass-to-metal seal connector which may be soldered or plugged into socket.

HIGH REL MILITARY CRYSTAL OSCILLATORS • IN HERMETICALLY SEALED CASE SERIES M5500 • 250 KHz-50 MHz







- Hermetically sealed resistance welded package
- Crystal specifically manufactured for oscillator with angle of cut controlled within ± 1 minute
- 168 hour Class B burn-in
- Simplified design with proprietary IC
- Capacitors to MIL-C-55681
- Extensive environment testing

ELECTRONICS CORP.
10 Renewal Place, New Rochelle, N.Y. • 10801 • (914) 576-6570

M-tron-more than just a responsible source for quality quartz crystals and oscillators!

In addition to providing you with products produced under superb quality control—with in-house test instrumentation including state-of-the-art TC equipment—we can offer you additional advantages: (1) provide engineering assistance with specifications to circuit applications . . . (2) make excellent delivery . . . (3) serve you anywhere in the world.

For OEMs we utilize computer design for efficient turnaround on prototypes. And, we can custom-produce clocks and AT-Cut Crystals to your specifications.

CRYSTAL OSCILLATORS

We utilize high-quality crystals to provide highly stable TTL and CMOS compatible logic signal sources in true hermetic, all-metal resistance welded modules. Custom-design capability.

	TTL	CMOS
Frequency range	250 Hz to 60 MHz	600 Hz to 12 MHz
Frequency stability	± .01%	± .01%
Temperature range	0 to 70°C	0 to 70°C
Input voltage	+5V ± 0.5 VDC	+4V to +12 VDC

Z80/Z8000 compatible and dual phase also available.

0.815 x 0.515 x 0.20 (20.7 x 13 x 5 mm), Lead length 0.25" (6.3 mm).

MICROPROCESSOR CRYSTALS

Frequencies listed are standard and available from stock in holders shown. Any frequency from 1 MHz to 100 MHz may be provided. Std. stability specifications are ± .0025% @ 25°C and ± .0035% of the 25°C reading from −20°C to +70°C.

OEM CRYSTALS

M-tron has the high quality, high volume production capability to produce for annual customer requirements. This can result in cost savings to you. Also, you are assured of delivery consistent with your production requirements. Initial deliveries can begin 6 to 8 weeks after receipt of your order.

Standard units, in quantities up to 200 units, are delivered from stock. Samples for new product applications can be delivered in just 4-5 weeks.

Frequency	1 MHz-170 MHz
Accuracy	±20 PPM @ 25°C
Stability	±25 PPM−20°C to +70°C
Load capacity	18pf
Resistance:	500−@ 1 MHz
	25−@ 15 MHz
	120−@ 170 MHz
Holder type	As specified in preceding

SCANNER/CB/WALKIE TALKIE CRYSTALS

M-tron is one of the country's largest suppliers of these crystals. We have 13,000 different types of units in stock.

MILITARY CRYSTALS

M-tron has maintained its military qualification and offers many QPL listed products. Write the factory for lists.

M-TRON ADVANTAGES

COMPUTER DESIGN, with programs for both crystals and oscillators, assures consistent, reliable designs. QUALITY CONTROL insures that we meet your specific requirements. ENGINEERING ASSISTANCE—Our engineering department is ready to assist in specifications of circuit analysis. WORLD-WIDE DISTRIBUTION adds up to on-time delivery—everywhere!

McCOY CRYSTALS

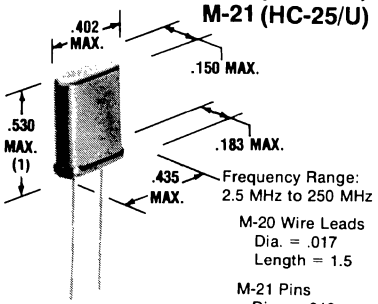
McCoy Electronics designs and manufactures the broadest frequency product devices offered to the market place. All items are custom, and are supported by the following critically important in-house operations: Photo fabrication facility, PC board manufacture, coil product, fabricated enclosure, thick film hybrid manufacture, complete environmental testing, including: Shock, Vibration (Sline and Random), X-ray, Humidity, Salt Spray, PIND, Gross and Fine Leaks, Precision Aging, and Acceleration.

Pride in product performance and quality has assured a prominent image for McCoy Electronics in today's market. For tomorrow, diligent effort in state-of-the-art technology, process optimization, and work ethic, comprise the solid foundation for which we will grow.

Products illustrated represent examples of our capability through past efforts, and are by no means a limit of our overall line. You are invited to discuss new applications with our design Engineering and Marketing staff.

SOLDER SEAL CRYSTALS

HOLDER SERIES M-20 (HC-18/U) M-21 (HC-25/U)



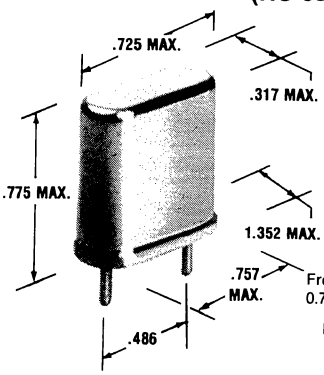
Frequency Range: 2.5 MHz to 250 MHz

M-20 Wire Leads Dia. = .017 Length = 1.5

M-21 Pins Dia. = .040 Length = .238

(1) Also available with short cans
"A" Height = .460 (5 MHz to 250 MHz)
"B" Height = .425 (5 MHz to 250 MHz)
"C" Height = .360 (10 MHz to 250 MHz)
"D" Height = .312 (10 MHz to 250 MHz)
"E" Height = .250 (15 MHz to 250 MHz)
"F" Height = .400 (10 MHz to 250 MHz)

HOLDER SERIES M-1 (HC-6/U) M-4 (HC-33/U)



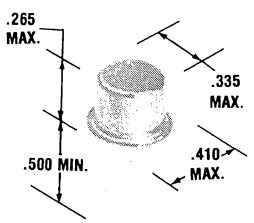
Frequency Range: 0.7 MHz to 250 MHz

M-1 Pins Dia. = .050 Length = .248

M-4 Wire Leads Dia. = .030 Length = 1.5

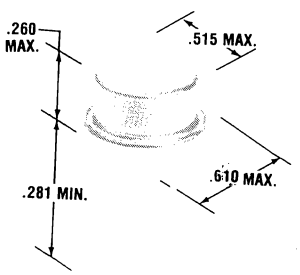
COLD WELD CRYSTALS

HOLDER SERIES W-6 (HC-35/U)



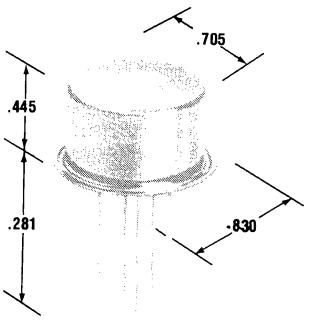
Frequency Range: 10 MHz to 250 MHz
Wire Lead Dia. = .018

HOLDER SERIES W-7 (HC-37/U)



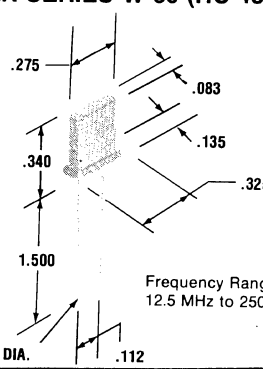
Frequency Range: 3 MHz to 250 MHz
Wire Lead Dia. = .018
Note: Pin version also available

HOLDER SERIES W-8



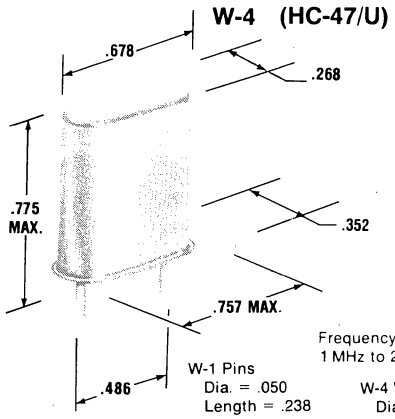
Frequency Range: 0.8 MHz to 250 MHz
Wire Lead Dia. = .018
Note: Pin version also available

HOLDER SERIES W-60 (HC-45/U)



Frequency Range: 12.5 MHz to 250 MHz

HOLDER SERIES W-1 (HC-36/U) W-4 (HC-47/U)



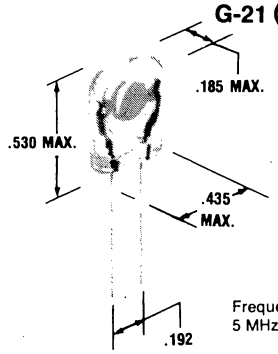
Frequency Range: 1 MHz to 250 MHz

W-1 Pins Dia. = .050 Length = .238

W-4 Wire Leads Dia. = .030 Length = 1.5

PRECISION GLASS CRYSTALS

HOLDER SERIES G-20 (HC-26/U) G-21 (HC-29/U)

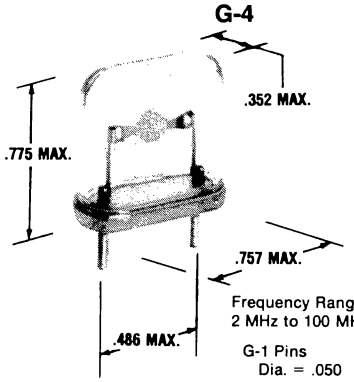


Frequency Range: 5 MHz to 100 MHz

G-20 Wire Leads Dia. = .017 Length = 1.5

G-21 Pins Dia. = .040 Length = .238

HOLDER SERIES G-1 (HC-27/U) G-4



Frequency Range: 2 MHz to 100 MHz

G-1 Pins Dia. = .050 Length = .238

G-4 Wire Leads Dia. = .030 Length = 1.5

McCOY CRYSTAL OSCILLATORS

McCoy's line of custom designed Crystal Controlled Oscillators is unexcelled in the industry. From clocks, TCXO's, VCXO's, TCVCXO's thru oven controlled units, we have a unit to meet your requirements. A complete in-house thick film facility coupled with the industries best crystal facility gives you miniaturization capabilities and quality controls unavailable elsewhere. Our QPL approvals on MIL-0-55310 allows the use of military approved unit where the requirement exists.

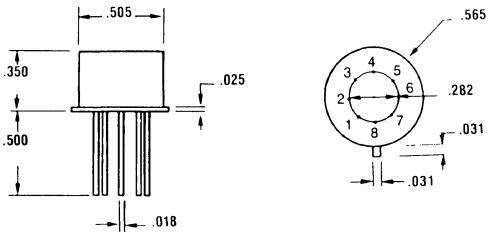
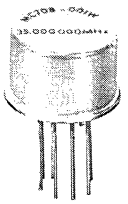
MODEL MC708

Standard Oscillator





Frequency Range: 250 KHz to 50 MHz

Stability (Options):	Temperature Range:
±50 PPM	0°C to +70°C
±50 PPM	−40°C to +85°C
±50 PPM	−55°C to +105°C

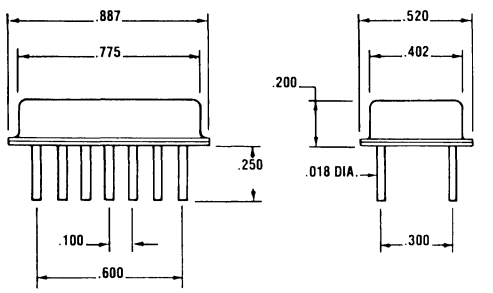
Input: +5V DC ±10%

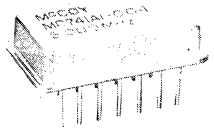
Output: TTL: Fan out 10 TTL Loads (156 KHz to 25 MHz)
TTL: Fan out 6 TTL Loads (25 MHz to 50 MHz)

Pin Connections
1,3,& 7 N/C Internally
2 & 6 Connected Internally
4. Common
5. R.F. Output
8. Oscillator B+

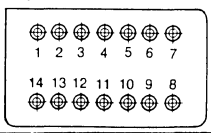
MODEL MC741A1

Standard Oscillator





Pin Connections
1,2,3,4,5,6,9,10,11,12, & 13 N/C Internally
7. Common
8. R.F. Output
14. Oscillator B+



Frequency Range: 250.0 KHz to 50 MHz

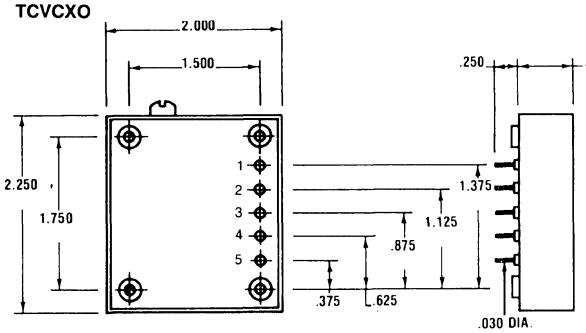
Stability (Options):	Temperature Range:
±50 PPM	0°C to +70°C
±50 PPM	−40°C to +85°C
±50 PPM	−55°C to +105°C
± 70 PPM	−55° C to +125° C

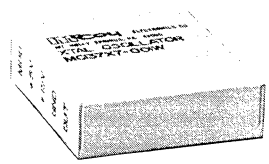
Input: +5V DC ±10%

Output:
TTL: Fan out to 10 TTL Loads (250 KHz to 25 MHz)
TTL: Fan out to 6 TTL Loads (25 MHz to 50 MHz)

MODEL MC137X7

TCVCXO





Pin Connections
1. Modulation Input
2. Logic B+
3. Oscillator B+
4. Common and Case
5. R.F. Output

Frequency Range: 180 KHz to 25 MHz

Stability	Temperature Range	Deviation
±1 PPM	−10°C to +70°C	±.001%
±5 PPM	−30°C to +70°C	±.0025%
±10 PPM	−40°C to +75°C	±.005%

Linearity: 5%

Output: TTL Compatible

Modulation Input Impedance: 10k Minimum

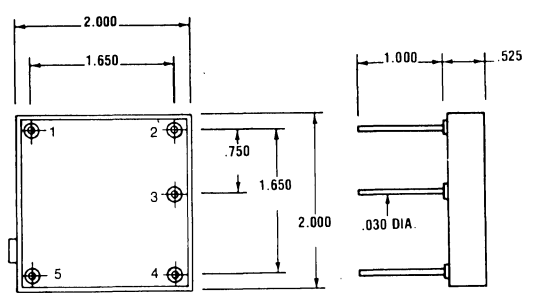
Control Voltage: ±2 Volts to ±10 Volts

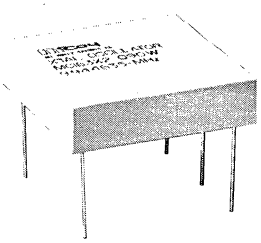
Negative Slope:

Input Voltage: +12 to +24V DC

MODEL MC163X2

TCXO





Frequency Range: 180 Hz to 150 MHz (depending upon output)

Stability Tr: ±0.5 PPM −20°C to +60°C
±1.0 PPM −55°C to +70°C
±5.0 PPM −55°C to +105°C
(Shown are typical specifications - this is a cost determining requirement and only actual needs should be specified)

Input Voltage Range: +12 VDC to +24V DC ±3% and +5V DC ±5% (TTL/DTL units only)

External Trim: 5 PPM Minimum

Aging: 1 PPM/Year Maximum

Output:

Sine Wave	
Freq Range 3-150 MHz Output 1-10 MW ohms Harmonics/ Sub-Harmonics −20 dB Minimum	
TTL/DTL	**CMOS**
187.5 KHz-25 MHz TTL/DTL Compatible	180 Hz-10 MHz CMOS Compatible

Frequency Range: 50 to 100 MHz

Input Voltage: ±12 to 24 DC ±3% and −5.2 VDC ±5%

Output: ECL Compatible

Sinewave
Pin Connections
1. Oscillator B+
2. N.C.
3. R.F. Output

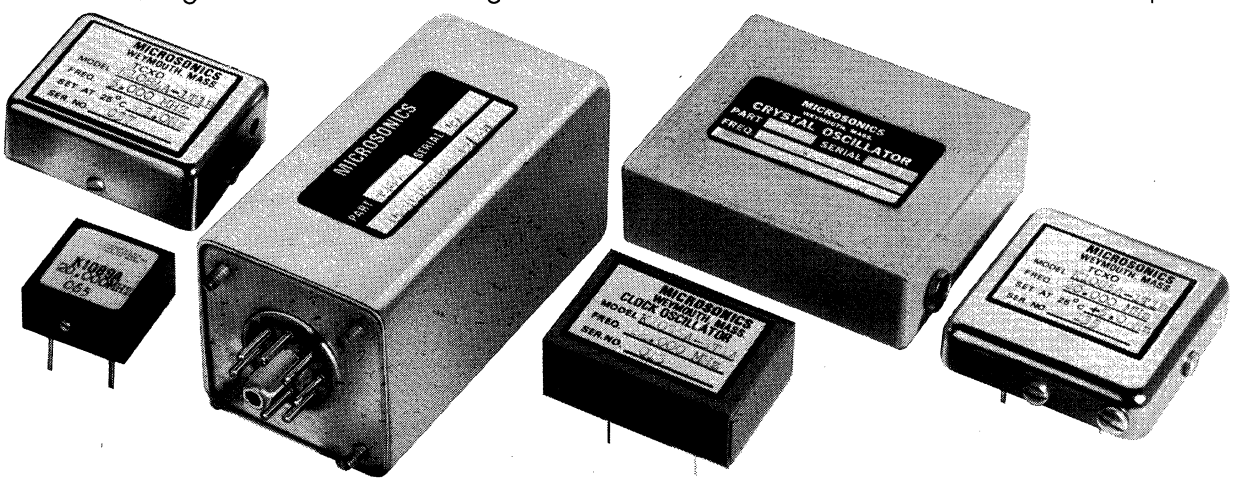
McCOY ELECTRONICS COMPANY
a subsidiary of OAK Technology Inc.

SPECIFY MICROSONICS

Go with a company that does it all.

In-house crystal manufacturing, producing up to 41 MHz fundamental frequencies. Computer optimized designs. Automatic testing and modern manufacturing facilities.

Engineering assistance and liaison. Special packaging. Customized and state-of-the-art devices. Quality assurance to MIL-I-45208A or MIL-Q-9858A if required.



CRYSTAL OSCILLATORS

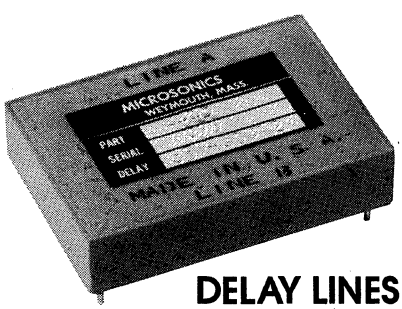
Ovenized (OC), clock (XO), temperature compensated (TCXO), and temperature compensated voltage controlled (TC/VCXO), crystal oscillators with sine wave, TTL, CMOS, and ECL compatibility. Many standard options available to insure fast delivery of quality oscillators to meet your large or small quantity needs. Plus, our ability to customize military and commercial designs provides you with the flexibility necessary to satisfy all your requirements.

FILTERS

Solving problems in the space, military, commercial and CATV fields. Filters available with center frequencies from 10 KHz to 200 MHz. Featuring wide bandwidths, phase matching, tracking and equalization. Call us for bandpass, band reject, comb, phase tracking and compensated Filters or Discriminators. Designs are available in L.C., or Crystal technologies.

We're available...

Microsonics' Sales and Engineering staff is available to assist you in your Delay Line, Filter and Oscillator requirements, covering the spectrum from high volume commercial production to high reliability space and military. We have the personnel, equipment and commitment to provide our customers with the products they need. Write or call now for bulletins and Engineering or Sales assistance.



DELAY LINES

We have nearly 25 years experience in delay lines, providing the military and television broadcast equipment markets with quality, high technology delay lines. Delay lines with delays of .5 to 5000 usec with center frequencies from 5 MHz to 200 MHz depending on application. Designs are available utilizing bulkwave in quartz or Zero Temperature Coefficient glass. We can help you solve your delay line problems.

MONITOR PRODUCTS

FIFTY SIX YEARS IN FREQUENCY CONTROL

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

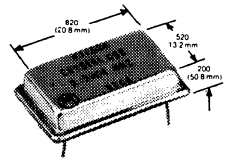
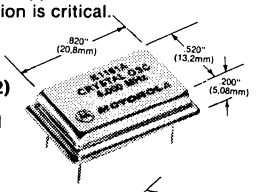
Crystal Clock Oscillators



(1)

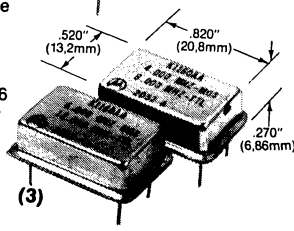
SPECIFICATION MODEL:	K1152A (1)	K1161A (2) K1163 (2)	K1160AA (3) DRIVES Z80A, Z80B, Z8000-TYPE MICROPROCESSORS
Frequency Range	.825 kHz-10 MHz	K1161A: 2.5 MHz-10 MHz K1163A: 10 MHz-15 MHz	2.5-6 MHz (MOS) TTL at 2X MOS
Frequency Stability: (Inclusive of calibration tolerance at 25°C. operating temperature, input voltage change, load change, aging, shock, and vibration.)	±.01%	±.01%	+0%, −0.020%
Temperature Range Operating: Storage:	0°C to +70°C −55°C to +125°C	0°C to +70°C −55°C to +125°C	0°C to +70°C −55°C to +125°C
Input Voltage: Input Current/Power:	+5 to 15V dc 3-11 mA (typical)	+5V dc ±0.5V dc 66 mA max.; 70 mA	+5V dc, ±0.5V dc 357 mW max.
Output: Square Wave: Levels: Symmetry: Output Load:	CMOS compatible "0"=Vss+.05V dc typ "1"=Vdd−.05V dc typ 60/40% @ 50% "1" 15pf	TTL compatible See description (2) "0"=0.5V dc max. "1"=2.4V dc min. 15 pf	Dual; MOS & TTL MOS: "0"=0.4V max. "1"=Vcc−0.4V min, Vcc max. TTL: "0"=−0.3V min, 0.5V max. "1"=2.5V min. MOS: 150 pf TTL: 15 pf
Environmental Shock	1,000 G's for 0.35 ms. 1/2 sine wave. 3 shocks each plane.		
Vibration:	10-55 Hz. 0.060" double amplitude; 55 Hz-2 kHz, 35 G's 12 hours duration		

The K1152A Low Power CMOS Crystal Clock Oscillators—Perfect for driving CMOS Microprocessors or in applications where low power consumption is critical.



(2)

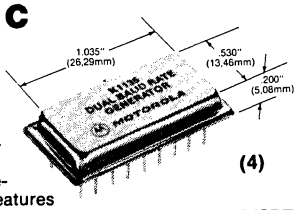
K1161A and K1163A are TTL compatible. The K1161A provides dual complementary outputs, while the K1163A has a second output at half the clock frequency.



(3)

K1160AA provides 2.5 to 6 MHz MOS output to drive Zilog or equivalent μPs, and TTL output at twice the processor frequency for systems timing.

Baud Rate Generator K1135A, B, C



(4)

The K1135 is a complete functional baud rate generator which provides the stable reference frequencies needed by serial interface devices such as UARTs, Modems, Teletype, cassettes, etc. Features • Choice of 2 x 16 output frequencies • Direct UART/USRT compatibility • Full duplex communications • Pin compatible with SMC 5036 • Zero error available at 19,200 baud.

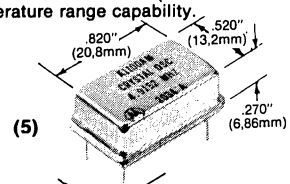
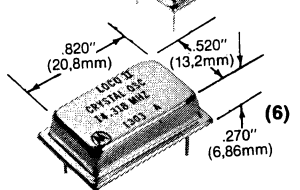
*When duty cycle is not exactly 50%, it is 50% ± 10%.

TTL Compatible Crystal Clock Oscillators

250 kHz to 70 MHz. All-metal welded package provides resistance to temperature/humidity extremes. Case ground minimizes E.M.I. Model K1100AM has ±0.01% all-inclusive stability—other models offer differing stabilities to suit application or budget requirements. K1158AM (1 to 30 MHz) offers extended temperature range capability.



(5)



(6)

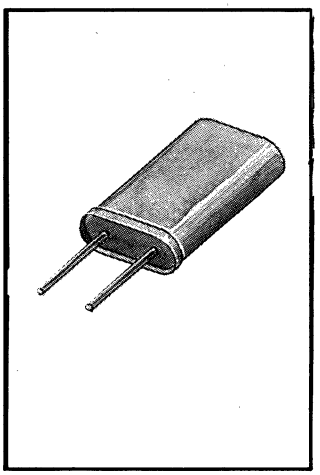
crystals, crystal oscillators, crystal filters & ceramic resonators

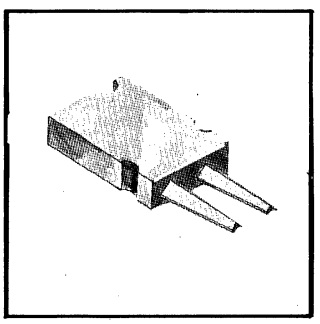
MURATA ERIE NORTH AMERICA, INC.



Crystals

Murata Erie North America, Inc. manufactures crystal cuts capable of handling the entire frequency spectrum from 1 KHz to 150 MHz. Specifications for crystals vary widely with regard to the equipment in which they are being used. Murata Erie manufactures to Military CR types and is qualified on the QPL list for most frequencies. It also manufactures crystals specifically to the customer's own specifications. Murata Erie welcomes the opportunity to quote on any type of crystal in solder seal, cold weld, and resistance weld holders.

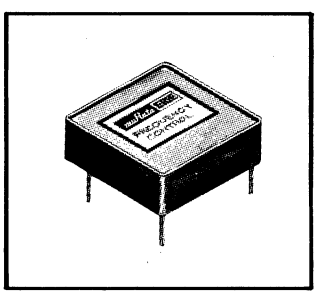
- Frequency Range: 1 KHz to 150 MHz
- Holders: HC-6, HC-13, HC-18, HC-25, HC-32, HC-35 (TO-5), HC-36, HC-39, HC-43, HC-44
- Seal: Cold Weld, Solder, Resistance Weld
- Microprocessor Types: 1 MHz to 100 MHz



Ceramic Resonators

Murata Erie's ceramic resonators derive their frequency selective capability from mechanical vibration resulting from a piezoelectric effect in the ceramic material. They are particularly useful in applications where extremely tight frequency tolerances are not required such as clock oscillators and audio tone generators. They are extremely reliable and low cost.

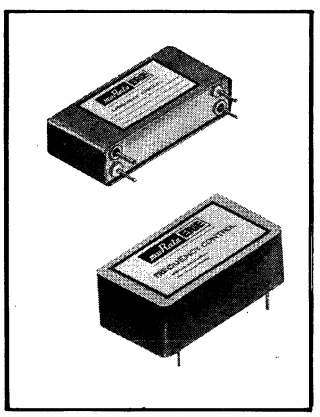
TYPE	CSA TYPE	CSB TYPE
Frequency Range	2.5 to 30 MHz	190 to 800 KHz
Vibration Mode	Thickness Vibration Fundamental	Area Vibration Fundamental
Frequency Tolerance	±0.3%	±0.3%
Temperature Stability (−20°C to +180°C)	±0.3%	±0.3%
Time Stability (10 years)	+0.5%	+0.5%
Equivalent Resistance	20 ohms max.	20 ohms max.



Crystal Oscillators

Murata Erie North America, Inc. manufactures a complete line of oscillators ranging from digital DIP clock oscillators to high stability, high reliability frequency sources. As a majority of our oscillators are custom designed, we welcome your inquiries and specifications. Write for our complete catalog.

- Frequency Range: 200 Hz to 600 MHz
- Size: .5″ x .8″ x .25″ to 2″ x 4″ x 1″
- Types: Clock (TTL, ECL, C/MOS or SINE). Integral Oven, Temperature Compensated, Voltage Controlled (VCO)
- Stability: From ±100ppm to ±3pp 10^9



Crystal Filters

Murata Erie North America, Inc. offers a complete line of sophisticated, discrete crystal filters ranging in frequency from 1 KHz to 100 MHz. In addition, we specialize in handling custom design specifications to fit your demanding applications. These high reliability units are rugged and compact, and can be designed to meet the environmental requirements of Mil-F-18327 in most cases.

We invite your questions and encourage you to contact Murata Erie for your special design requirements.

- Center Frequency: 1 KHz to 100 MHz
- Bandwidth: .005% to 10% of F_o
- Shape Factor: As low as 1.25 to 1
- Ripple: Generally less than 1 dB
- Insertion Loss: Usually less than 3.0 dB
- Ultimate Attenuation: Up to 100 dB max
- Maximum Operating Temperature: −55°C to +105°C

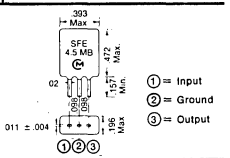
4.5 MHz Ceramic Filters for TV Sound

Specifications — SFE4.5MB

Nominal Center Frequency: 4.5 MHz. **3 dB Band Width:** ±60 KHz Min. **20 dB Band Width:** 530 KHz Max. **Insertion Loss:** 8.0 dB Max. **Spurious Response:** 20 dB Min. (within ±1 MHz). **Impedance:** 1000 ohms. **Temperature Range:** −20°C~+80°C. **Withstanding Voltage:** 50 VDC.



① = Input
② = Ground

CRYSTALS

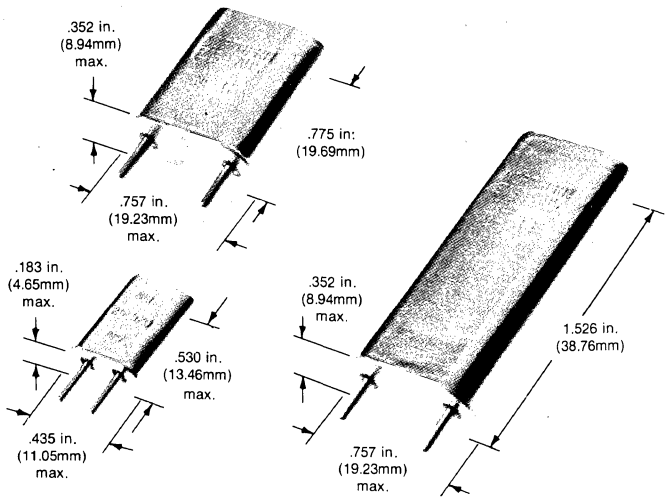
LOW & HIGH FREQUENCY CRYSTALS

Low Frequency Crystals
800 Hz — 900 KHz
High Frequency Crystals
1.0 MHz — 60 MHz

Full spectrum coverage from 1 KHz to 60 MHz in all popular metal MIL spec enclosures, including solder seal, resistance weld, and cold weld packaging. Controlled parameters for filter applications available in both glass and metal enclosures.

MICROPROCESSOR CRYSTALS

NEL offers complete in depth stocks of all popular microprocessor crystals in frequency range 1.0 MHz to 48 MHz. The popular microprocessors have been characterized to insure crystals supplied meet specifications. When ordering, please specify MPU device being used. All crystals are hermetically sealed in metal HC - 33/HC - 18 packages to insure product integrity.



AVAILABLE WITH P.C. HOLDDOWN PIN

OSCILLATORS

TTL

Frequency Range:
HS-100 - 3.5 MHz to 30 MHz
HS-200 - 225 KHz to 4.0 MHz
HS-500 - 25 MHz to 60 MHz

Frequency Tolerance:
± .01% Overall 0-70°C

CMOS

Frequency Range:
HS-300 - 3.5 MHz to 8.0 MHz
HS-400 - 600 Hz to 3.5 MHz

Frequency Tolerance:
±.01% Overall 0-70°C

Z80/8000

Frequency Range:
HS-180 - 3.5 MHz to 6.0 MHz
HS-280 - 500 KHz to 3.5 MHz

Frequency Tolerance:
(0 - 70°C)
+0.0%, - .02% at 2.5 MHz, 4.0 MHz, 6.0 MHz
+.02%, - 0.0% at 500 KHz
±.01% All other frequencies

DUAL OUTPUT (MOS/TTL)

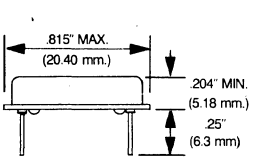
The HS-1820, HS-2820, and HS-2840 series of crystal clock oscillators, utilizing hybrid technology and DIP hermetic packaging, are now available to fill the need of the digital systems or microcomputer designer for a dual output clock that is both TTL and MOS compatible. They are particularly suited for Z80, Z80 A/B, and Z8000 microprocessors in system designs. Standard products are available.

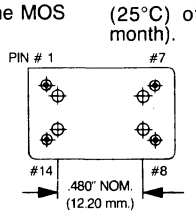
Resistance weld, all-metal, hermetically sealed package. DIP compatible.

HS-1820 — frequency range of 3.5 MHz to 12 MHz MOS/TTL, with the same frequency at each output.

HS-2820 — frequency range of .5 MHz to 3.5 MHz MOS/TTL, with the same frequency at each output.

HS-2840 — frequency range of 4 MHz to 12 MHz TTL and .5 MHz to 6 MHz MOS with the TTL output frequency at 2n times the MOS output frequency (n = 1, 2, or 3).





REAL TIME CLOCK

The HS-306 low power clock oscillator, utilizing hybrid technology and DIP hermetic packaging, is intended to fill the need of the digital systems designer that requires both low power consumption for battery back-up and precise frequency control. The output frequency of 32.768 KHz is CMOS compatible with a tolerance at room temperature (25°C) of ±10ppm (±25 seconds per month).

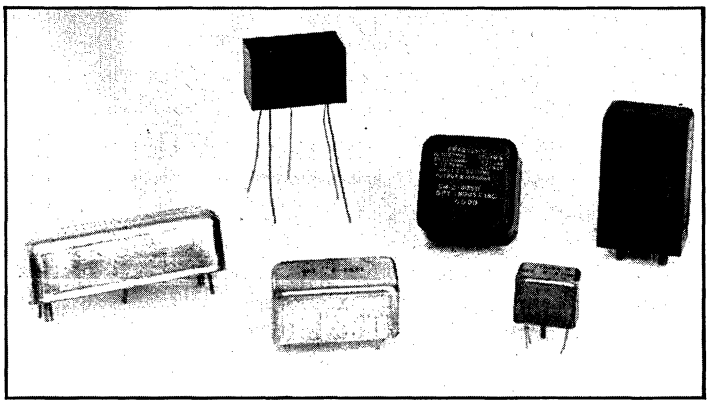
MIDLAND ROSS

CUSTOM FILTERS ENGINEERING AND MANUFACTURING

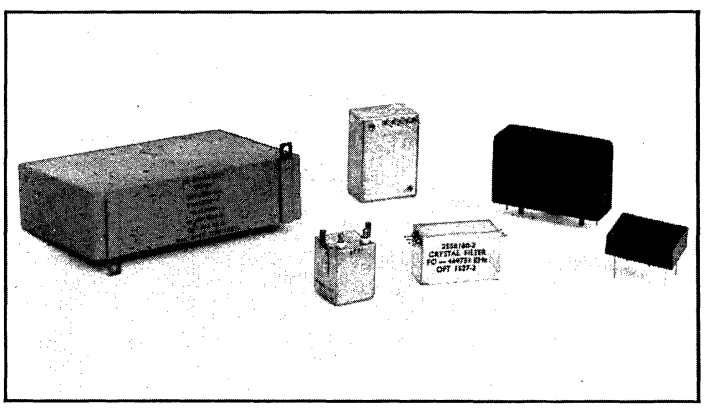
MONOLITHIC CRYSTAL FILTERS

Ranging from 4.0 MHz to 30 MHz with relative bandwidth from .04% to .3% of center frequency. Component stabilization procedures permit guaranteeing maximum stability with operating life. Areas of specialization include delay correction, phase matching and time domain synthesis.



DISCRETE CRYSTAL FILTERS

Ranging from 1 KHz to 70 MHz with relative bandwidths from .005% frequency and upwards.

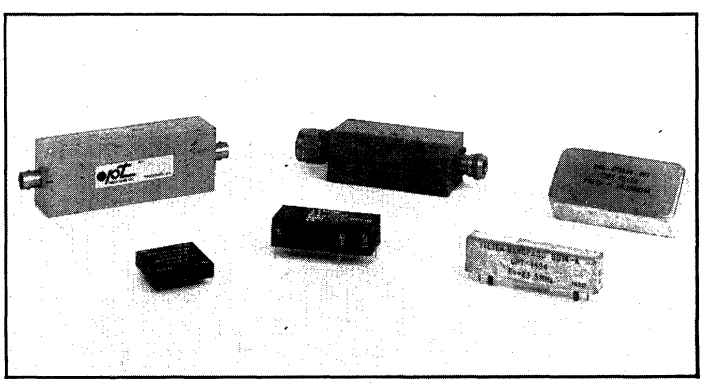


OPT has all engineering drawings and manufacturing rights from the following companies:

BULOVA FILTER CO.
BURNELL & CO.
FILTECH
NYTRONICS
OMNITEC
ORTHO FILTER

LC FILTERS AND NETWORKS

Low pass, band pass, high pass, band reject, amplitude and delay correcting, impedance matching ranging from DC to 400 MHz with relative bandwidths higher than .2% of center frequency where design permits. Computer synthesis, analysis and optimization, along with broad application experience, continued company sponsored research and development are reflected by our strong participation in many advanced military programs as well as high quality communication systems.



MILITARY COMPLIANCE TO MIL-F-18327

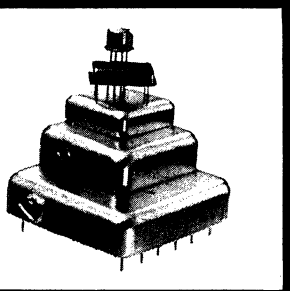
CRYSTAL CLOCK OSCILLATORS



TCXO's

- Crystal controlled thick film hybrid oscillators (XO's).
- Baud rate generators and microprocessor drivers.
- Screening per MIL-0-55310 and MIL-STD-883B is available.
- QPL'd to MIL-O-55310/09/16
- Temperature compensated crystal oscillators (TCXO's).
- Custom designed oscillators to meet your specifications.
- Standard frequencies are available from stock.

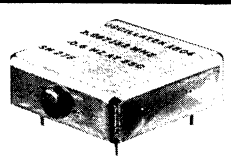
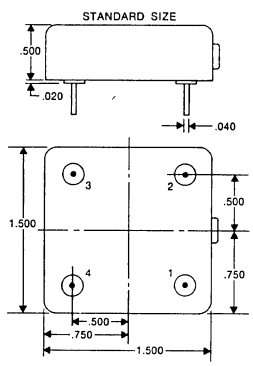
TCXO





PIN 1 = GND
PIN 2 = VCC
PIN 3 = OUT
PIN 4 = N-C
Non Std. Pinouts and Custom Designing is Available

NOTE:
(1) Very low current CMOS output at low frequency and at high frequency of up to 12 MHz is available specially at 5 Volts.

(2) Non-standard custom designing with multiple outputs, gated outputs, ECL outputs, very low frequency or very high frequency outputs is available. Consult factory.

TCXO's

STABILITY:
1. $\pm 1 \times 10^{-7}$ (0°C to 50°C)
2. $\pm 2 \times 10^{-7}$ (−20°C to 70°C)
3. $\pm 5 \times 10^{-7}$ (−40°C to 85°C)
4. $\pm 1 \times 10^{-6}$ (−55°C to 125°C)

VCXO's

STABILITY: ±.0001% to ±.01%
LINEARITY: ±1% to ±10%
DEVIATION: ±.001% to ±.1%

XO's

STABILITY:
1. $\pm 5 \times 10^{-6}$ (0°C to 50°C)
2. $\pm 10 \times 10^{-6}$ (−20°C to 70°C)
3. $\pm 20 \times 10^{-6}$ (−40°C to 85°C)
4. $\pm 45 \times 10^{-6}$ (−55°C to 125°C)

FREQUENCY RANGE: TTL = 1 Hz to 100 MHz; CMOS = .01 Hz to 30 MHz
ECL = 1 MHz to 100 MHz; SINEWAVE = 100 KHz to 100 MHz
SUPPLY: 5V to 30V (Current as low as 1.5 mA available)
STANDARD SIZES: 1" x 1" x .26", 1.5" x 1.5" x .5", 2" x 1" x .5", 2" x 2" x .5"
IN ADDITION TO OUR STANDARD PRODUCT LINE WE OFFER CUSTOM DESIGN CAPABILITY.

ovenaire oscillators

Ovenaire has the capabilities, experience and production techniques to meet the most exacting crystal oscillator requirements — from State-Of-The-Art Precision Crystal Oscillators to high volume, low cost TCXO's.
The following tables list condensed specifications on regular production models. For additional information on these and other crystal oscillators, call the Ovenaire factory.

CRYSTAL AND RC CONTROLLED TIMERS — CYCLE TYPE WITH PUSH BUTTON RESET

Model Series	Time Intervals	Accuracy	Temperature Range	Output	Load	Supply Voltage	Size
TMX271B	15-30-60 Min.	±30 Sec. per day	−30°F to +130°F	SPDT Contacts	.5 Amp.	+7.5V	7″ x 4″ x 2½″
TMX272	1 Min. to 12 Hr.[7]	±10 Sec. per day	−30°F to +130°F	SPDT Contacts	.5 Amp.	+7.5 V	6.9″ x 3.5″ x 2.6″
TMX83	15-30-60 Min.	±3 Sec. per Mo.	+14°F to +120°F	SPDT Contacts	.5 Amp.	+7.5V	7″ x 4″ x 2½″
TMX83A	5-15-30 Min.	±3 Sec. per Mo.	+14°F to +120°F	SPDT Contacts	.5 Amp.	+7.5V	7″ x 4″ x 2½″
TMX183A	5-15-30 Min.	±3 Sec. per Mo.	+14°F to +120°F	SPDT Contacts	.5 Amp.	+8.3V	7″ x 4″ x 2½″
TMX145	5-15-30-60 Min.[7]	±3 Sec. per Mo.	+14°F to +120°F	SPDT Contacts	.5 Amp.	+7.5V	5.6″ x 3.1″ x 1.53″
TMC37	5 to 30 Sec. Adj.	±10%	+20°F to +150°F	SPST Contacts	5 Amp.	6V or 12V	4″ x 2¼″ x 2¼″

[2] For ±.01% over −55°C to +125°C add "A" to Model Number.

[3] Sine wave options listed above, S11/12/19/20 not available for voltage control ranges greater than ±1%.

[4] Depending on frequency.

[5] TTL option available.

[7] Includes time display.

[8] For minimum frequency to maximum frequency.

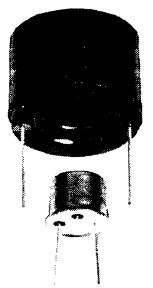
ovenaire ovens

Ovenaire's Circuit Design Technology is providing State-Of-The-Art Electronic Proportional Control Miniature Crystal and Component Ovens. Space-saving packages for PCB mount, low power consumption, low cost. A representative few of many available designs are shown. Most models are available with temperature setting from +35°C to +95°C, voltage from 5VDC to 36VDC. Ovenaire also offers a complete range of other ovens for commercial and military applications.

MODEL PCL1-43

For HC-18/U, HC-25/U, HC-42/U or HC-43/U crystals. 0.750″ dia., 0.562″ high. Temperature stability ±3°C over −30°C to +60°C typical. Also available with temperature adjustability of ±5°C of nominal.

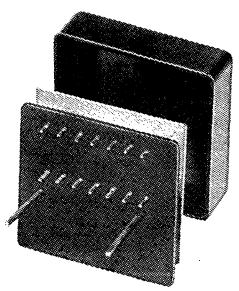


MODEL TO5P

For TO5 crystal, transistor or IC. 0.750″ dia., 0.500″ high. Temperature stability ±3°C over −30°C to +60°C ambient typical. Available with temperature adjustability of ±5°C nominal.

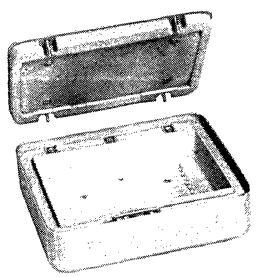
MODEL TO5C

For crystal, transistor or IC with TO5 case. Access to cavity by removing top cover. .750″ dia., .550″ high. Temperature stability ±3.0°C over −30°C to +60°C ambient typical.



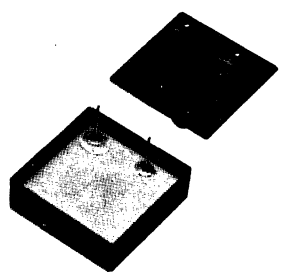
MODEL PC1-25

For 14 pin or 16 pin DIP IC or .375″ x .875″ x .156″ component. Overall size .312″ x 1″ x 1″. Temperature stability ±4°C over −30°C to +60°C ambient typical.



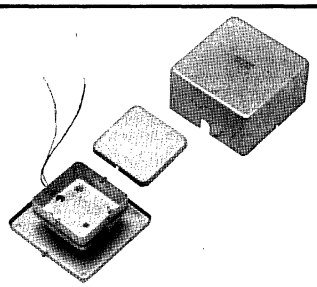
MODEL CO2001

High stability proportional control component oven. Temperature stability ±1°C over 0 to +60°C ambient. Cavity area 2.75″ x 3.93″ x .78″ high. Feed-thru pins for internal connections. O.D. 3.94″ x 4.63″ x 1.25″ high. 24VDC.



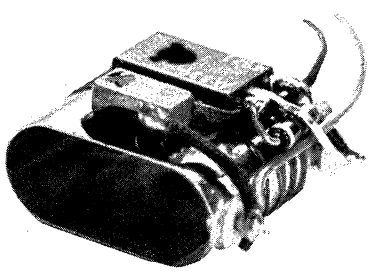
MODEL PC1-34

For 1 or 2 DIP's. Component area 1.45″ Sq. x .250″ tall. Overall dimensions 1.5″ Sq. x .50″ tall. Temperature stability is ±3°C over an ambient range of −30°C to within 10°C of the set-point. Various combinations of set-point temperature and DC operating voltage are available.



MODEL CO2106

Component oven with customer-adjustable set-point from 50°C to 90°C. Nominal operating voltage is 19-24 VDC. Heated cavity sizes available from 2″ Sq. x .75″ tall to 6″ Sq. x 1.75″ tall. Control is solid-state, proportional.



MODEL PCL1-21

Slip-on oven for HC-6/U crystal. Size .97″ x .53″ x .83″ high. Temperature stability ±3°C over −30°C to +60°C ambient typical. Models also available for HC-25/U crystal.

MODEL PC2-10

Low cost proportional control oven for 2 HC-6/U crystals. Temperature stability ±2°C over −30°C to +60°C ambient. Size 1.25″ dia. x 1.75″ seated height. Octal plug base.

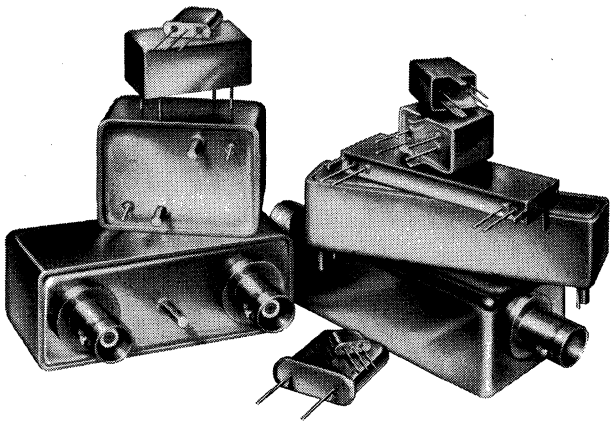
KIDDE

Piezo Technology, Inc.

The standard in monolithic crystal filters



As the technology leader since 1965, Piezo Technology has set the standard in monolithic and discrete crystal filters. The standard in performance. The standard in size. The standard in cost. The standard in quality.

From raw quartz processing through automated testing, our unmatched, fully-integrated manufacturing facility gives us total control over every process step and assures you of on-time delivery.

If you've got crystal filter production requirements, find out why the world's foremost commercial and military equipment producers — those who set the standards — depend on PTI for leading-edge filter performances.

And now we offer the latest technology in ovenized and temperature-compensated crystal oscillators. Contact your local PTI representative for this new standard in performance and value.

Standard Monolithic Filters

PTI offers a complete line of over 100 standard models from 5 to 200 MHz, including our new ultraminiature "A" series. These off-the-shelf filters are designed to meet the most popular requirements and give you maximum performance per dollar as well as quick delivery.

Custom Crystal Filters

PTI can supply custom monolithic and discrete crystal filters for your commercial and military production requirements from below 5 MHz to over 300 MHz. We are experienced with a wide range of special requirements, including: tough environmental specs, high reliability, controlled group delay, low IM, low phase noise and amplitude linearity.

Crystal Oscillators

PTI can supply custom ovenized oscillators and temperature-compensated crystal oscillators for high-performance applications from 2 MHz to 500 MHz. Conventional AT-cut, SC-cut, low power, fast warm-up, and low phase noise are just some of the features available.

State-of-the-art Technology

Once again, PTI is advancing the state-of-the-art in quartz products. Radically new wafer processing techniques allow us to make quartz resonators at fundamental frequencies to 100 MHz — 300 MHz on third overtone.

These are available in oscillator crystals and in custom oscillators, where their low impedance leads to simple circuitry. They are also available in crystal filters, where higher fundamental frequencies allow wider bandwidths and greater selectivity than previously possible.

For fast and knowledgeable applications assistance, contact Piezo Technology, or your local PTI representative.

[a] A tandem set consists of two 2-pole units for 4-pole response, three 2-pole units for 6-pole response, and four 2-pole units for 8-pole response.

[b] Parallel termination capacitance is adjusted for optimum filter response (nominal value ±2.0 pF)

[c] Flat loss is 4.5 dB Max.

[d] For "A" holder filters, spurious responses are 90 dB min.

General Specifications

All specifications subject to change without notice.

Operating Temperature Range: −30°C to + 80°C for "F" Series, − 20°C to + 70°C for "A" Series

	2 Pole	4 Pole	6, 8 Pole
Maximum Ripple Over Temperature (dB):	1	2	2
Maximum Insertion Flat Loss Over Temperature (dB):	2	2.0	3.0

The standard in monolithic crystal filters

VHF Filters

The models listed below consist of 2-pole monolithic and 4-pole tandem monolithic filters designed for use as front-end filters in low-band and high-band VHF custom applications. They are also suitable for HF up-conversion, first IF filtering and spectrum clean-up in frequency systhesis. Nominal operating frequency is specified by the customer in the 25 MHz to 200 MHz range.

All models (except 2133A) operate over a temperature range of −20° to + 70°C. Filters are matched to 50 ohms with convenient phono-jack, BNC, or a variety of other connectors. Model 2133A operates from −30° to +80°C and is supplied in the ultraminiature "A" package. See table below for detailed specifications.

Model No.	No. Poles	Center Frequency Range (MHz)	Attenuation Boundaries		Passband Ripple (dB Max)	Ultimate Atten. (dB Min)	Flat Loss (dB Max)	Termination (Ohms)	Case Style
			3 dB Max kHz	20 dB Min kHz					
2131	2	25-35.99	±6.5	±40	1	30	3	50	VB*
2132	2	36-50	±6.5	±40	1	30	3	50	VB*
2133	2	138-170	±6.75	±60	1	30	4	50	VB*
2133A[a]	2	140-170	±6.75	±60	1	30[b]	3	note[c]	A
4131	4	25-35.99	±6.5	note[d]	1	—	5	50	VB*
4132	4	36-50	±6.5	note[d]	1	—	5	50	VB*
4133	4	138-170	±6.75	±30[e]	1	—	6	50	VB*

[a] Unwanted Response from f_{on} to f_{on} +200 kHz: 15 dB (Min)

[b] Attenuation from f_{on} −100 kHz to f_{on} −5000 kHz to f_{on} +200 kHz to f_{on} +5000 kHz.

[c] R_o = 3100 ohms (depends on f_{on})

[d] ±20 kHz at 15 dB (Min): ±40 kHz at dB (Min)

[e] ±60 kHz at 45 dB (Min)

*See connector chart, next page.

Special Four-pole Monolithic Filters

Piezo Technology, Inc., manufactures high-performance, four-pole monolithic crystal filters at standard 30, 45, and 75 MHz frequencies. All are housed in a single "F" style holder. Custom frequencies are also available.

The filter design utilizes four resonators on a single quartz wafer to provide four-pole response. These models offer wider passband values than two-pole inductorless tandem-set units. Their reduced size makes them ideal for high-density packaging requirements.

Models	4102F	6570	4371F	5889	4171F	5786
Nominal Center Frequency (F_{on})	30 MHz		45 MHz		75 MHz	
Attenuation Boundaries: 3 dB	F_{on} ±50 kHz Min.		F_{on} ±7.5 kHz Min.		F_{on} ±13 kHz Min.	
35 dB			F_{on} ±25 kHz Max.			
50 dB			F_{on} ±50 kHz Max.			
60 dB	F_{on} +800 kHz to +10 MHz F_{on} −400 kHz to −10 MHz				F_{on} ±300 kHz Max.	
Ripple (dB Max.)	2.0		1.0		2.0	
Operating Temperature (°C)	−20 to +60		−30 to +60		−55 to +85	
Flat Loss (dB Max.)	4	5	3	4	6	7
Termination Impedance: Ohms	7000	50	7000	50	4000	50
Parallel Capacitance‡ (pF)	−1	0	−1	0	−1	0
Package	F	MVB	F	MVB	F	MVB

‡ On models without 50-ohm terminations, the parallel capacitance should be adjustable ± 2 pF for best passband response.

Piezo Technology, Inc.

The standard in monolithic crystal filters

Special Two-pole Monolithic Filters

Models 2843A and 2844A. Ultra-miniature 2-pole monolithic crystal filters designed for use as first IF filters in 800 MHz land-mobile radios. Both models have a nominal center frequency of 45 MHz and offer high rejection at the second IF image frequency. They are supplied in case style "A". Contact Piezo Technology, Inc. for a data sheet.

Monolithic Crystal Discriminators

Models 2283F and 2378F. 2-pole monolithic crystal filters designed for use as frequency discriminators in conjunction with a suitable quadrature detector such as the CA 3089E (RCA). These models are designed for narrow-band FM applications at 10.7 MHz (2283F) and 21.4 MHz (2378F). For data sheets and information concerning other frequencies, contact Piezo Technology, Inc.

Q-Tech crystal controlled clock oscillators integrate crystal and semiconductor technology to produce a completely hybrid device. This results in a product of the highest reliability at attractive prices. Oscillators produced to MIL-O-55310 requirements, MIL-M-38510 procedures and screened to MIL-STD-883B, Level S or B, meet the highest high reliability requirements of military and space use.

SPECIAL PACKAGING: Q-Tech oscillators can also be obtained in special package configurations. Examples of this include leadless carrier packages; a miniature package capable of operating in an environment of 10,000 P.S.I., and other unusual configurations.

Q-TECH clock oscillators are available in 4 types: TO-5 (8 lead), TO-8 (8 or 12 lead), DIP (14 or 16 lead), and FLATPACK (QT21 and QT22). The TO5 and flatpack units cover limited frequency ranges, while the TO-8 and DIP both have an extremely wide output frequency range for an extensive variety of applications. The tables below provide full details.

STANDARD STABILITIES

2 x 10^{-6}	For 10% change of Vcc
1 x 10^{-6}	For 20% change of Load
5 x 10^{-6}	Aging — 30 days
1 x 10^{-5}	Aging — 1 year

Q-Tech Corporation

PIONEERS IN HYBRID TECHNOLOGY
STATE OF THE ART DEVELOPMENT

MINIATURE CRYSTAL CLOCK OSCILLATORS

C-MOS CLOCK OSCILLATORS

Frequencies available in the C-MOS line of oscillators are related to input voltage. It is essential, therefore, when ordering a C-MOS unit to specify the input voltage.

Power requirements of C-MOS units are related to both frequency and input voltage. Most of the power is dissipated within the crystal oscillator portion of the device, and buffering, division, or other logic requirements within the unit contribute little to the total power consumption.

ECL/VHF/UHF CLOCKS AND SOURCES

ECL and sine wave clocks and sources are available to 400 MHz.

Q-Tech can work with you to hybridize high stability and synthesized sources up to 3gHz.

Phase noise and G-Sensitivity data are taken when required. Full temperature range, −55°C to +125°C, available for these clocks and sources.

FREQUENCY RANGES AVAILABLE

Package Type	Package Size	C-MOS Frequency Range	TTL Frequency Range
TO-5	QT1	50KHz to 15MHz	20KHz to 30MHz
TO-8	QT2 or QT3	300Hz to 15MHz	100Hz to 25MHz
14 Pin DIP	QT4 or QT6	.1Hz to 15MHz	.1Hz to 75MHz
16 Pin DIP	QT8	.1Hz to 6MHz	.1Hz to 75MHz
EC-7	QT9	.1Hz to 3MHz	—
20 Lead Flat Pack	QT21	1.0Hz to 15MHz	1Hz to 75MHz
16 Lead Flat Pack	QT22	50KHz to 15MHz	25KHz to 75 MHz

QUALITY CONFORMANCE AND RELIABILITY ASSURANCE

Q-Tech's facilities are qualified to MIL-I-45208 and are well equipped to perform the screening, quality conformance and reliability assurance requirements of MIL-M-38510A and MIL-STD-833. Q-Tech is a QPL source for all hybrid MIL-O-55310 oscillators.

SPECIAL PACKAGES AND ENCLOSURES

Q-TECH can provide units to unusual package requirements including miniature units withstanding 10,000 PSI and Flat Packs with less than .100 inch thickness. Ultra-thin (.065) ceramic packages available with frequencies to 60 MHz.

UPPER DIMENSIONS IN INCHES, LOWER DIMENSIONS IN MILLIMETERS.

HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

Crystal Oscillators

Custom oscillators from the leaders in frequency control

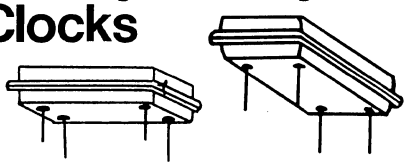
Forty years of superior performance—design, manufacture, and delivery of outstanding quartz crystal products—stand behind Reeves-Hoffman's new line of crystal oscillators.

Accustomed to high-volume production of out-of-the-ordinary orders, we take your custom requirements in stride—starting from a blank drawing board where necessary—and put our immense fund of experience, imagination, and manufacturing resources into each custom oscillator assignment.

The oscillator types described on this page are only representative of a capability which can give you just the right product (including RC and LC networks) for your application.

Complete control of our manufacturing is in-house, from the raw crystal to the hermetic seal. This freedom from outside suppliers lets us promise delivery without fear of someone else's production problems. Call us to discuss your oscillator needs: (717) 243-5929.

Coldweld-Packaged TTL Hybrid Crystal Clocks



The superiority of coldweld sealing is well known: A good coldweld gives a better vacuum, and therefore a higher Q, and also leaves no microsplashes of metal inside the package. Reeves-Hoffman's many years of experience and volume production capability in coldweld sealing are important considerations in the choice of a supplier of quality hybrid crystal clocks. Request Data Sheet 02-020-0001.

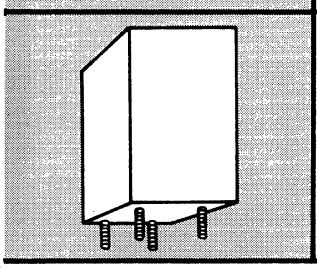
Option	1	±0.5 ppm (+10 to +40°C)
Option	2	±1 ppm (0°C to +50°C)
Option	3	±2 ppm (−10°C to +60°C)
Option	4	±3 ppm (−15°C to +65°C)
Option	5	±4 ppm (−20°C to +70°C)
Option	6	±5 ppm (−25°C to +75°C)

Crystal VCXO's

Request Data Sheet 02-002-0001

LOGIC FAMILY	TTL	CMOS	ECL
FREQUENCY RANGE	3 to 20 MHz	3 to 10 MHz	3 to 30 MHz

Stability	
Δf/Δ Temp	±10 ppm (0°C to +70°C)
Δf/Δ Input Voltage	±1 ppm ±5%
Δf/Δ Load	±1 ppm ±5%
Δf/Δ Time	±3 ppm/yr



Crystal OCXO's

LOGIC FAMILY	TTL	CMOS	ECL
FREQUENCY RANGE	3.0 to 60.0 MHz	3.0 to 20 MHz	3.0 to 150 MHz

Output	Sine wave available P_0 up to +13dBm
Stability	To ±1 x 10^{-11}/°C
Frequency Range	Up to 500MHz for sine wave output

VCXO capability can be included

Multiple case and base arrangements are available on all models.

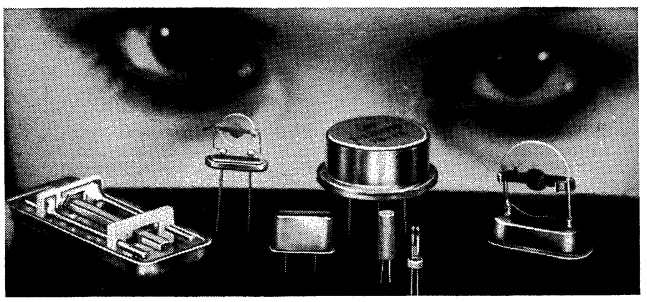
Crystals of proven reliability for military and industrial applications

For 40 years, Reeves-Hoffman has been a leader in the design and manufacture of quartz crystals for government and industry. We are the only company offering the improved stability of coldweld sealing at a lower cost than conventional solder-sealed units.

All Reeves-Hoffman crystals are cut, ground, polished, plated, and mounted at the factory to exacting specifications. Shock, vibration, and hermeticity characteristics all exceed Mil-Spec C-3098. Crystals for oscillator and filter applications are available from 1 kHz to 200 MHz, with varying temperature coefficients, effective resistance, electrical equivalents, and Q values dependent on physical limitations and circuit requirements.

The staff of crystal engineers at Reeves-Hoffman welcomes the opportunity to quote on and discuss your particular application.

Ask for our free booklet, "A Specifier's Guide to Quartz Crystals," written to reduce your design problems.



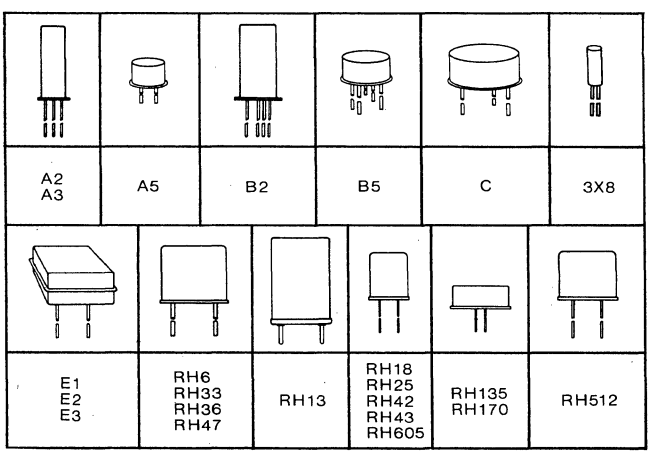
When specifying crystals, please supply the following:	Crystal Categories
1. Frequency required 2. Holder style 3. Calibration temperature/ tolerance 4. Oscillator load capacitance 5. Temperature range 6. Maximum series resistance 7. Stability over temperature	**Oscillator Crystals** • **Industrial** Aging: 5 to 25 x 10^{-6} per year • **Precision** Aging: Less than 5 x 10^{-6} per year or less than 5 x 10^{-8} per day after first 30 days. • **Military** (per Mil C-3098) **Filter Crystals** See facing page

Low-Frequency Crystals

1.0 to 1200 kHz in standard and miniature holders

Throughout our long history as a quality supplier of low-frequency crystals, Reeves-Hoffman has dedicated our efforts towards responding to the changing needs of the electronics industry. As miniaturization reduced the size of electronic equipment, the traditionally large low-frequency crystal became one of the largest components in the system. To respond to this, Reeves-Hoffman worked closely with the crystal users. As a result, miniature crystal holders such as the RH135, RH170, RH605, and RH3X8 were developed. This is just one example of Reeves-Hoffman's ingenuity and responsiveness to the needs of our most important asset...our customers.

Recommended Element for Frequency Range		Holder Style vs. Frequency	
Frequency Range	Element	Frequency	Holder
1-10 kHz	J	1-1.4 kHz	RH13
		1.4-1.8 kHz	RH13, E1, E2
10-100 kHz	NT, XY	1.8-20 kHz	RH13, E1, E2, B2
100-250 kHz	5° X	20-86 kHz	RH13, E1, E2, B2, RH170, RH135, A2, A3
250-500 kHz	DT	86-150 kHz	RH36, RH47, E1, E2, RH13, B2, A2, A3, RH6, RH33, RH170
500-1000 kHz	SL	150-300 kHz	RH36, RH47, A3, E2, RH13, A2, RH6, RH33, B2, E1, E3
		300-450 kHz	RH36, RH47, RH6, RH33, RH512, E3
The choice of element will vary. However, Reeves-Hoffman will choose the best element for your specific requirements based on cost and performance considerations.		450-900 kHz	RH42, RH43, RH18, RH25, RH36, RH47, RH512, RH6, RH33, E3
		900 kHz-1.2 MHz	RH42, RH43, A5, RH18, RH25, RH36, RH47, RH512, RH6, RH33, E3, RH605



High-Frequency Crystals

1.0 to 200.0 MHz

The use of high-frequency crystals has grown continually over the years as timing rates, tranmission frequencies, and data-processing speeds increased. Fortunately, Reeves-Hoffman is continually involved in this evolution to the extent that we possess the capabilities to respond to just about any requirement for high-frequency AT-cut crystals. In the past, many challenges have been presented to our engineering and manufacturing personnel. We are extremely proud of their response record, and look forward to working with you to continue this trend.

Frequency	Recommended overtone	Holder Style vs. Frequency	
		Frequency	Holder
1-30 MHz	AT, fundamental	1.0-2.5 MHz	RH36, RH47, E3, RH6, RH33, RH512, C
20-60 MHz	AT, third overtone	2.5-10 MHz	RH36, RH47, RH42*, RH43*, RH18*, RH25*, A5*, RH6, RH33, E3, RH512, B5, C
60-125 MHz	AT, fifth overtone	10-100 MHz	RH42, RH43, RH18, RH25, A5, B5, E3, RH512
125-160 MHz	AT, seventh overtone	100-200 MHz	RH42, RH43, RH18, RH25, A5, E3, RH512
160-200 MHz	AT, ninth overtone

DISCRETE OR MONOLITHIC CRYSTAL FILTERS

- CUSTOM computer-aided design to your specifications saves development time and assures optimum performance during production.
- Experience in supplying devices for military radar and communications applications.
- All crystals designed and built in Reeves-Hoffman's own plant, pre-aged and temperature-tested for improved stability.
- Packaged to meet your most exacting requirements.
- Modern equipment automatically measures critical parameters over the specified temperature range to assure top performance.
- Complete environmental testing facilities: MIL-F-18327, MIL-STD-202.

To order filters, please specify:

1. Center frequency and tolerance.
2. 3 or 6 dB bandwidth.
3. 40 or 60 dB bandwidth and frequencies at these points if asymmetric.
4. Minimum attenuation in stopband.
5. Passband ripple.
6. Insertion loss.
7. Phase or delay requirements.
8. Input and output impedance (tolerance).
9. Operating temperature range.
10. Packaging details.
11. Additional electrical and environmental specifications as required.

TYPICAL FILTERS

EQUALIZED DELAY FILTERS

frequency range:
100 kHz—30 MHz
typical delay distortion
<200 μs
typical shape factors <1.2:1
impedance level to specifications. Meets Mil. Std. 188.

SINGLE SIDEBAND FILTERS

frequency range:
10 kHz–30 MHz
symmetrical—use for either sideband
regular—specify upper or lower
shape factor: from 1.1:1
typical carrier attenuation
>30 dB

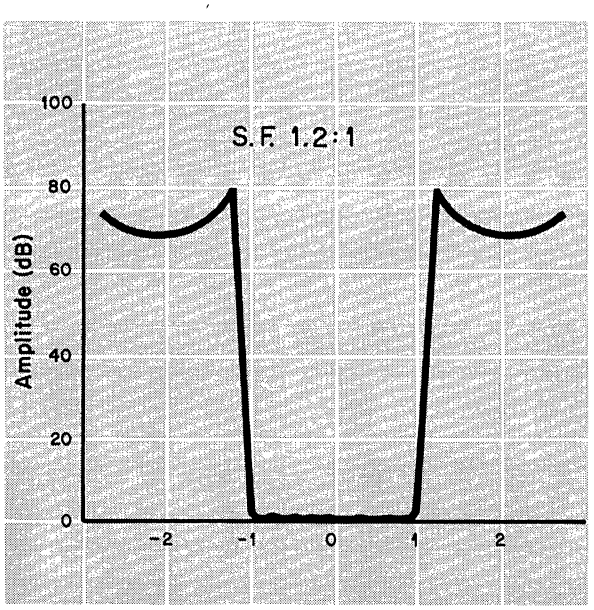
VERY NARROW BANDWIDTH FILTERS

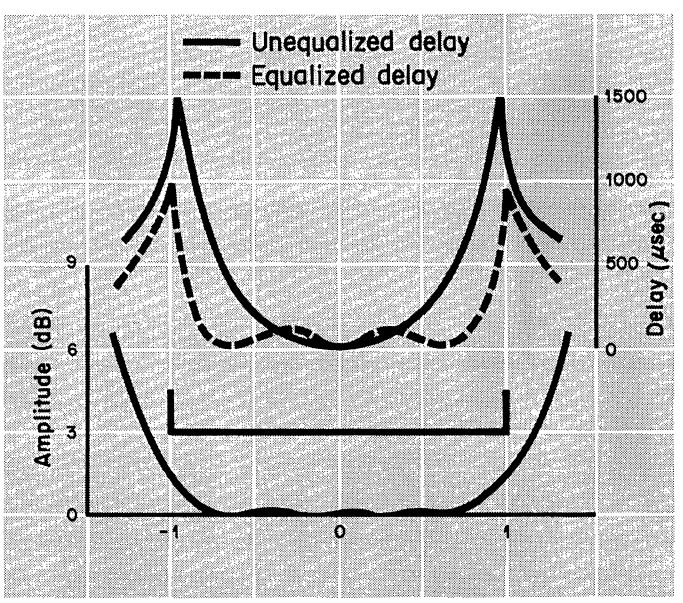
designs: Bessel, Butterworth, Gaussian, Chebyshev
frequency range:
10 kHz–30 MHz
typical shape factor <6:1
impedance level to specifications

COMB FILTERS

frequency range:
10kHz—30 MHz
typical bandwidth <0.2%
typical shape factor <6:1

NORMALIZED CHARACTERISTICS





Many designs over the 10 kHz-80 MHz frequency range have already been constructed. Call to determine whether one of these will satisfy your requirements, or to receive a custom design and quotation to your particular specifications.

Quartz Crystals

SaRonix offers a broad line of crystal products with the best combination of price, quality, delivery, and service available. We carry a large stock of commonly used crystals, and feature rapid turnaround time on special units and large production runs.

In addition to the industry standard holders, many special configurations and a wide range of miniature units are available. We provide back-up stock for all scheduled orders.

Send your drawings and specifications, or call our Customer Service Department for ordering assistance and availability. Toll free (800) 227-8974

Standard Microprocessor

The accompanying selection chart lists NYMPH AT-cut quartz crystals for most common microprocessor applications. Frequencies, configurations, and circuit calibration conditions shown are those in general industry usage or are as recommended by the various microprocessor manufacturers.

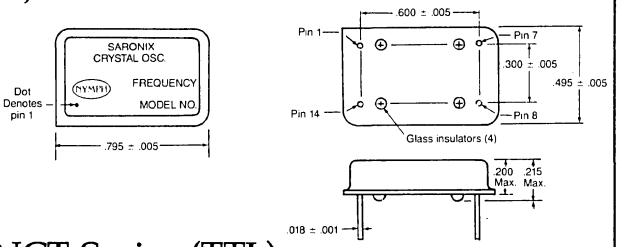
Physically and functionally interchangeable with all major manufacturers' devices.

Crystal Clock Oscillators

Fixed Frequency

The SaRonix NYMPH crystal clock oscillator family includes a wide variety of state-of-the-art thick film hybrid devices for generating TTL, CMOS, Baud Rates, and special output characteristics.

These devices are packaged in a 14 pin DIP compatible, all metal, resistance welded, hermetic unit. They are physically and functionally interchangeable with all major manufacturer's devices.



NCT Series (TTL)

Freq. Range:	250 kHz–60 MHz
Freq. Stability:	±0.0025 to ±1.00% over optg. temp. & voltage
Optg. Temp. Range:	0 to +70°C
Input Voltage:	+5 VDC ± 0.5 V
TTL Output:	
Symmetry:	60/40 to 40/60 @1.4 VDC Level
Rise & Fall Times:	15 ns Max. for 250 kHz to 25 MHz, 7 ns Max. for 25 MHz to 60 MHz
"O" Level:	+0.4 Volts
"I" Level:	+2.4 Volts
Output Load:	1 to 10 TTL gates

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

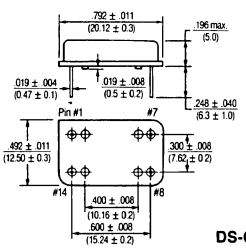
CRYSTAL OSCILLATORS

Seiko Instruments clock oscillators provide all metal, hermetically sealed cases; notably low power consumption; and tight frequency stability for the most demanding applications and reliability. Units are TTL or CMOS compatible.



DS-C304A

SPECIFICATIONS

STANDARD	DS-C304A
Frequency Range	250 KHz to 50 MHz
Frequency Stability	±.007% @ 25°C
Temperature Stability	±.001%
Temperature Range	0°C to 70°C
Storage Temperature	−55°C to +125°C
Input Voltage	+5.0 ±0.5V dc
Input Current	90mA over temp. range
Symmetry	60/40% @ 1.4V dc
Rise and fall time	15 ns maximum (250 KHz–8.999 MHz) 10 ns maximum (9.0 MHz–31.999 MHz) 6 ns maximum (32 MHz–50 MHz)
Output Load	1 to 10 TTL gates

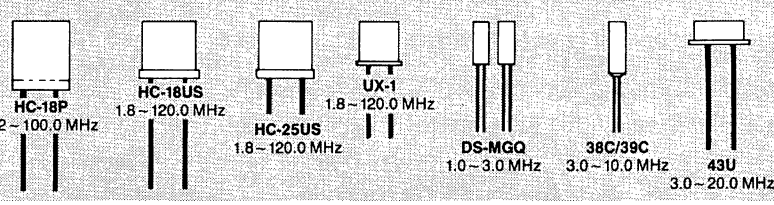
CUSTOM CRYSTALS/OSCILLATORS

QUARTZ CRYSTALS

Seiko Instruments also offers the following custom cases for your special quartz crystal engineering needs. Plus, the smallest MHz quartz crystal units in the world...the DS-MGQ series with a frequency range of 1 to 3 MHz, and a temperature stability of ±5 ppm from −30 to +70°C.



HC-18P
3.2 ~ 100.0 MHz

HC-18US
1.8 ~ 120.0 MHz

HC-25US
1.8 ~ 120.0 MHz

UX-1
1.8 ~ 120.0 MHz

DS-MGQ
1.0 ~ 3.0 MHz

38C/39C
3.0 ~ 10.0 MHz

43U
3.0 ~ 20.0 MHz

CRYSTAL OSCILLATORS

Seiko Instruments also offers tight tolerance oscillators in the cases shown below. Call for complete details.

DS-C308
0.5 ~ 64.0 Hz
3.0 ~ 16.0 MHz

DS-C304
250KHz ~ 50.0 MHz

DS-C303
3.0 ~ 24.0 MHz

SCP
Sokol
Crystal Products, Inc.

The Talk of the Universe

Our crystals and crystal filters are making talk wherever talk is being made — from space/com to computerized auto ignition systems. We pride ourselves on producing high reliability filters (withstanding high frequency vibrations to 3,000 HZ, and shock specs to 2,000 G's) with competitive pricing and performance that far surpasses imports in all parameters. We make it imperative to buy American.

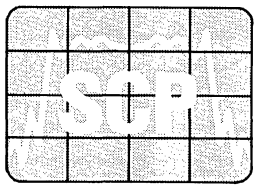
Today's engineering challenges become tomorrow's product line at Sokol. Although our specialties are monolithics, discretes, L-C's, time delays and crystals (in a fundamental frequency range of 1-45 MHZ, with 3rd, 5th, and 7th overtones to 200 MHZ,) we are pleased to supply engineering assistance with crystals and crystal filter design in any problematic circuit application or specification requirement you may encounter.

Technically we're good. For instance, we presently supply the smallest matched set of filters available in the industry. Our MIL qualifications include:

- Equipment calibration maintained according to MIL-C-45662
- Inspection procedures approved according to MIL-I-45208
- Quality approved according to MIL-Q-9858A
- Soldering approved according to WS 6536.

Our in-house test equipment is capable of testing to any MIL spec, and our production facilities handle both high volume commercial and high reliability space and military projects.

Why are we the talk of the universe? Because we make it possible.



Sokol Crystal Products, Inc.

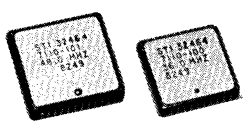
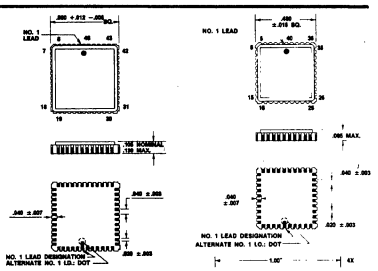
LEADLESS CHIP CARRIER (LCC) CRYSTAL OSCILLATOR/LOGIC CLOCK (Mfd. IAW MIL-STD-883)

Stabilities to ±.005%, Temperature Range −55 to +125°C

TTL — 7110, 39 Hz to 65 Hz

CMOS — 4110, 600 Hz to 15 MHz (Specify Vdc, +5 to +15)
.480″ sq. — Pin 37 Com; 39 Output; 4 Supply
.560″ sq. — Pin 44 Com; 47 Output; 5 Supply
MIL-STD-883 Screening Available (Class "B" typical)



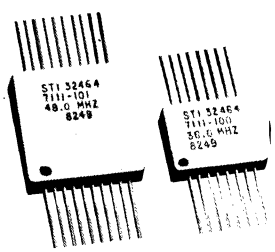


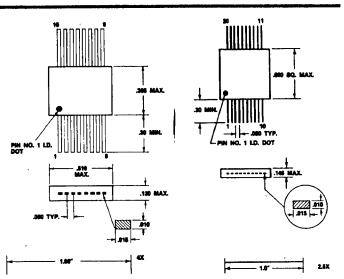
FLAT PACK CRYSTAL OSCILLATOR (Mfd. IAW MIL-STD-883)

Stabilities to ±.005%, Temperature Range −55 to +125°C

TTL — 7111, 28 Hz to 65 MHz

CMOS — 4111, 3.5 Hz to 15 MHz (Specify Vdc, +5 to +15)
16 Lead — Pin 8 Com; 9 Output; 16 Supply
20 Lead — Pin 10 Com; 11 Output; 20 Supply
MIL-STD-883 Screening Available (Class "B" typical)





QPL to MIL-O-55310: Spectrum Technology is a Qualified Supplier of crystal oscillators to MIL-O-55310/4 through /17 per QPL-55310. The /4 through /7 are TCXO types; /8 through /19 are hybrid units with general specifications as shown. Hybrid oscillators are available with Class S, Class B, or Class C screening.

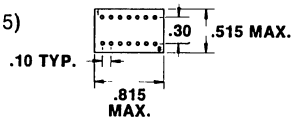
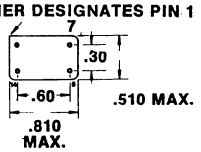
SQUARE CORNER DESIGNATES PIN 1





Temperature Compensated Crystal Oscillators

For applications requiring high stability, low power and zero warm-up time. Designed for P.C. Board mounting.

Input Voltage: +10 to +20 volt range - regulation to ±10%

Output Signal: TTL standard; CMOS, SINE-WAVE or ECL available

Temp Stability: ±2 x 10^{-7}, 0 to +50°C; ±5 x 10^{-7}, −20 to +65°C; ±1 x 10^{-6}, −55 to +85°C; ±5 x 10^{-6}, −55 to +125°C. Other ranges available

Freq Range:
7002: 10 KHz to 20 MHz; 1 Hz to 100 MHz available special
7006: 500 KHz to 20 MHz; 10 KHz to 100 MHz available special

Trim Adjust: 5 to 10 years aging range

SPECIAL PACKAGES: Many special configurations are available including smaller packages, units with mounting studs, brackets, inserts, and special electrical characteristics. Contact Spectrum Technology for further information.

QPL TCXO's:
Spectrum is an approved QPL Supplier to M55310/4, /5, /6 & /7.

Standard (Alternate) Package Configurations

Spectrum Technology utilizes conventional P.C. Board or proven reliability Hybrid Circuits as required to supply most of the alternate oscillator packages previously designed into many commercial and military programs. Most packages can provide CMOS, TTL, Sinewave or ECL outputs from 1 Hz to 100 MHz.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

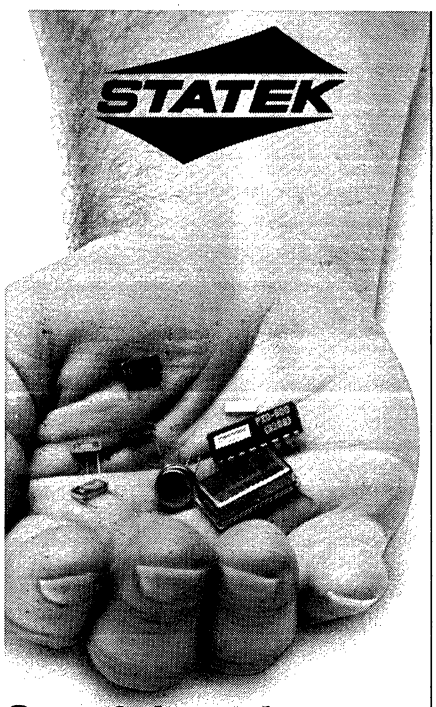
VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

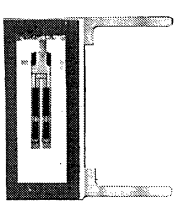


Statek has the most complete line of miniature, low-frequency quartz crystals and crystal oscillators in the world!

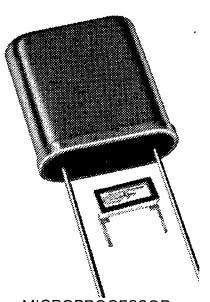
0.0006 Hz to 1.5 MHz

Quartz Crystals: 10kHz to 1.5MHz • High accuracy • Produced in volume by photolithography • Low aging • High Q • Rugged, hermetically sealed ceramic package • Designed for hybrid or PC board packaging.

Quartz Crystal Oscillators: Miniature (TO-5) series • Low power series • Programmable, multi-frequency series • CMOS/TTL compatible series • Very low frequency series.



Statek miniature CX crystal with proprietary tuning fork resonator in hermetic package. Magnified 3 times.



MICROPROCESSOR CRYSTAL
This Statek 1 MHz microprocessor crystal (bottom) is 48 times smaller in volume than the HC-33 industry-standard case (top).

Miniature Quartz Crystals CX Series

10 kHz to 1.5 MHz
Statek's CX Series crystals consist of a miniature quartz resonator, hermetically sealed in a rugged, ceramic package.

Types Available (See Table 1)
The CX Series is available in two case sizes: CX-1 and CX-2. The CX-1 is available from 10 kHz to 1.5 MHz and the CX-2 is available from 16 kHz to 1.5 MHz.

"H" models are designed for series (two cascaded inverters) oscillators. "V" models are designed for Pierce (single inverter) oscillator applications. See Table 1 for case size and configuration options and other special features.

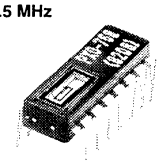
and Quartz Crystal Oscillators

Low-Frequency Quartz Crystal Oscillators

Programmable Crystal Oscillators PXO Series

0.002 Hz to 1.5 MHz



PXO-768

Generates 57 discrete, programmable frequencies from a single crystal • Packaged in standard 16-pin DIP • Low power • Low aging • TTL compatible. All frequencies generated are derived from a single built-in quartz crystal oscillator and exhibit the same high levels of accuracy and stability as those of the base frequency.

Standard calibration tolerance: ±100 ppm. Tighter tolerances available • Frequency stability: ±0.015%*, −10 to +70°C • Supply voltage: 4-6V • Supply current: 1 mA max • Rise time: 70 nsec typ • Fall time: 30 nsec typ • Aging: 10 ppm max first year.

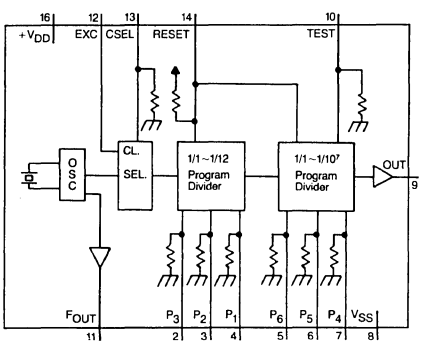
*Does not include calibration tolerance

Standard Frequency Ranges, PXO Series*

MODEL	BASE FREQUENCY	OUTPUT FREQUENCY RANGE
PXO-32768	327.68 kHz	0.00273 Hz to 327.68 kHz
PXO-600	600 kHz	0.005 Hz to 600 kHz
PXO-768	768 kHz	0.0064 Hz to 768 kHz
PXO-1000	1 MHz	0.0083 Hz to 1 MHz

*Other frequencies available. Consult factory.

Block Diagram, PXO Series



Pin Functions, PXO Series

Prog 1 through Prog 6 control divide ratio of base frequency.

P_1	P_2	P_3	DIVIDING RATIO	P_4	P_5	P_6	DIVIDING RATIO
0	0	0	1/1	0	0	0	1/1
0	0	1	1/10	0	0	1	1/10
0	1	0	1/2	0	1	0	$1/10^2$
0	1	1	1/3	0	1	1	$1/10^3$
1	0	0	1/4	1	0	0	$1/10^4$
1	0	1	1/5	1	0	1	$1/10^5$
1	1	0	1/6	1	1	0	$1/10^6$
1	1	1	1/12	1	1	1	$1/10^7$

OUT: Supplies programmed output frequency with rectangular pulse shape (50% duty cycle).

TEST: Setting this terminal Hi multiplies programmed output frequency by 1,000, except when programmed divide ratio is less than 1/1000.

FOUT: Supplies base frequency of internal crystal oscillator.

EXC: Input for counting external clock instead of internal clock.

CSEL: Clock select. Setting this terminal Hi causes the divider to count the frequency of an external clock instead of the internal clock.

RESET: Setting this terminal Lo resets all counters and sets output switches to Lo.

(All inputs except EXC and RESET have internal pull-down resistor. RESET has pull-up resistor.)

Output Frequencies, PXO Series

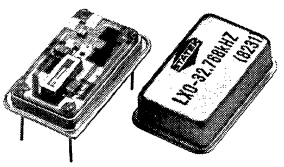
*33% duty cycle **40% duty cycle

High Accuracy Crystal Oscillators LXO Series

10 kHz to 1.5 MHz



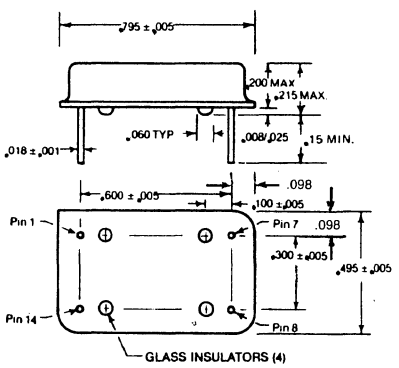
Laser tuned for high accuracy • Low aging • Low power • CMOS compatible • Low profile, hermetically-sealed package.

The LXO Series has the highest accuracy and stability of all Statek oscillators.
Specifications and characteristics of the LXO Series vary with frequency. Characteristics of the LXO-32.768 kHz model are presented below as an example. Contact factory for other frequencies.

Standard calibration tolerances: A: ±10 ppm; B: ±25 ppm; C: ±200 ppm. Tighter tolerances available • Frequency stability: −0.012%, −20 to +70°C* • Supply voltage: 3-6V • Rise time: 1.0 μsec max • Fall time: 1.0 μsec max • Supply current: 50 μA typical at 5V, 20 μA typical at 3V • Aging: 1 ppm/yr typical, 3 ppm max.

*Does not include calibration tolerance.

Package Dimensions (inches), LXO Series



Miniature Quartz Crystal Oscillators

Statek manufactures three series of oscillators in TO-5 packages: SQXO-2 Series, LQXO-4 Series and DQXO-3 Series. They all have these features in common:
Laser tuning for high accuracy • hybrid construction • low aging • operating temperature: industrial: −40 to +85°C; military: −55 to +125°C • Shock (survival): 1000g. 1msec., ½ sine • vibration (survival): 10g rms, 10-2000 Hz.

TO-5 Dimensions

1. All metal parts are gold plated.
2. Leads are 0.019" (0.48mm) dia. max.

Miniature Quartz Crystal Oscillators SQXO-2 Series

10 kHz to 1.5 MHz

TTL and CMOS compatible • Standard calibration tolerances: A: ±0.01%, B: ±0.03%, • Frequency stability: ±0.02% typ., −40 to +85°C* • Supply voltage: 4-6V • Supply current: 200 μA-3mA • Standard frequencies: same as CX-1 crystal.

*Does not include calibration tolerance.

Miniature Quartz Crystal Oscillators: Low Power LQXO-4 Series

10 kHz to 1.5 MHz

Low power • CMOS compatible • Standard calibration tolerance: A: ±0.01%, B: ±0.03%, • Frequency stability: ±0.02% typ., −40 to +85°C* • Supply voltage: 4-6V • Supply current: 25-350 μA • Standard frequencies: same as CX-1 crystal.

*Does not include calibration tolerance

Miniature Quartz Crystal Oscillators/Timers: Low Frequency DQXO-3 Series

2 pulses/hr to 10 kHz*

CMOS compatible • Low power • Standard calibration tolerances: A: ±0.01%; B: 0.03% • Frequency stability: ±0.02% typ., −40 to +85°C** • Supply voltage: 4-6V • Supply current: 50 μA-3mA.

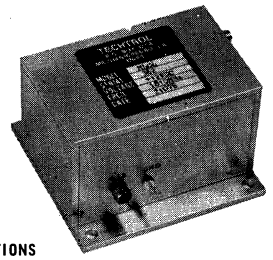
*Lower frequencies available
**Does not include calibration tolerance.

TECHTROL

815 MARKET STREET
NEW CUMBERLAND, PENNSYLVANIA 17070
(717) 774-2746

MICROWAVE FREQUENCY SOURCE

CRYSTAL CONTROLLED (±.001%) UP TO 8 GHz



SPECIFICATIONS

Fixed Frequency Output: Manufactured to your exact requirements.
Stability: ±.001% over temperature range.
Temperature Range: −20°C to +55°C.
Power Output: 100 mW, 20 mW, or, 5 mW min. as specified.
Harmonics and Subharmonics: −40 dBc for all sources with output frequency in range of 1 GHz to 8 GHz.
Harmonics and Subharmonics: −30 dBc for all sources with output frequency in range of .5 GHz to 1 GHz.
DC Input: 12 to 28 VDC Case ground plus or minus (as required).
Output Connectors: SMA.
All units have mechanical frequency adjustment to compensate for aging.
Spurious Levels: −60 dBc.

OPTIONS AVAILABLE

1. Secondary Standard (Oven Controlled)
±.001% frequency stability over temperature range of −20°C to +60°C.
Utilizes a small solid state oven enclosing the crystal only.
Phase noise same as standard unit.

Additional Requirements:
+24 VDC to +28 VDC oven power (may be unregulated).
Add 1.0″ to length.
Model number becomes MK.

2. Frequency Standard (Oven Controlled)
High Stability
±2 x 10^{-8} frequency stability over temperature range of −20°C to +55°C.
Utilizes a tight tolerance proportional type oven and AGC, crystal is designed for long term aging characteristics.

Additional Requirements:
+24 VDC to +28 VDC oven power (maybe unregulated).
Add 1.5″ to length.
Model number becomes MH.

3. Low Phase Noise
±.003% over temperature range of −20°C to +60°C.
Add 1.0″ to length.
Model number becomes MN.

4. Low Phase Noise/High Stability
±2 x 10^{8} over temperature range of −20°C to +55°C.

Additional Requirements:
+24 VDC to +28 VDC oven voltage (may be unregulated).
Add 1.5″ to length.
Model number becomes MHN.

5. Voltage Control Crystal Oscillator
÷ 3 options are available.
Tuning voltage ±3.
Modulation rate 100 KHz.
Linearity 5% best straight line.

Model MVA.
±.003% frequency swing.
±.002% frequency stability 0° to +50°C.
Add 1.0″ to length.

Model MVB.
±.01% frequency swing.
±.002% frequency stability 0°C to +50°C.
Add 1.5″ to length.

Model MVC.
±.1% frequency swing.
±.005% frequency stability 0°C to +50°C.
Add 2.0″ to length.

6. Multi-Channel Crystal Source
Up to 7 independent frequencies available.
TTL compatible frequency selection.
±.005% frequency stability.
Temperature range of −20°C to +50°C.
Add 2.6″ to length.
Model number becomes MM.

MODEL NUMBER	FREQUENCY	MIN. POWER OUTPUT	SIZE (IN.) L-W-H
M401	.5-1 GHz	5 mW	2.2-3.4-2
M402	.5-1 GHz	20 mW	2.2-3.4-2
M403	.5-1 GHz	100 mW	2.2-3.4-2
M404	1.01-2 GHz	5 mW	3.2-3.4-2
M405	1.01-2 GHz	20 mW	3.2-3.4-2
406	1.01-2 GHz	100 mW	3.2-3.4-2
407	2.01-4 GHz	5 mW	3.2-3.4-2

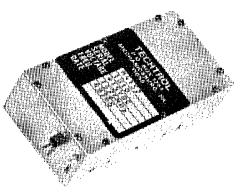
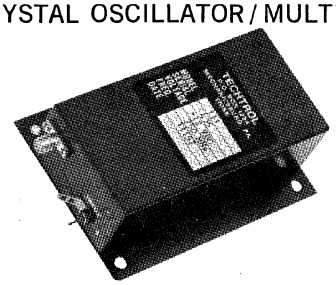
M409	2.01-3 GHz	100 mW	3.2-3.4-2
M410	3.01-4 GHz	100 mW	3.2-3.4-2
M411	4.01-8 GHz	5 mW	3.2-3.4-2
M412	4.01-8 GHz	20 mW	3.2-3.4-2
M413	4.01-8 GHz	100 mW	4.3-3.4-2
M414	8.01-12 GHz	5 mW	3.2-3.4-2
M415	8.01-12 GHz	20 mW	4.3-3.2-2
M416	8.01-12 GHz	50 mW	4.3-3.2-2

COMPACT MICROWAVE SOURCE/MODEL M4000



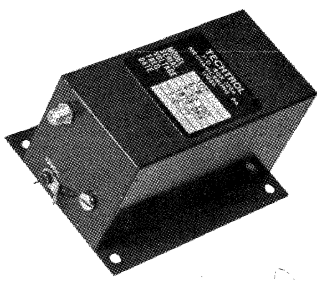
SPECIFICATIONS:
Frequency Range: 500 MHz to 3 GHz
±.003% −20°C to +65°C.
+15 VDC supply voltage.
60 dB spurious + harmonic rejection.
Excellent phase noise.
SMA output connector.
Filter-Con for DC supply input.
Design for high shock + vibration.
Size: 1″ x 1.5″ x 3″.

CRYSTAL OSCILLATOR/MULTIPLIER SOURCE/MODEL 111



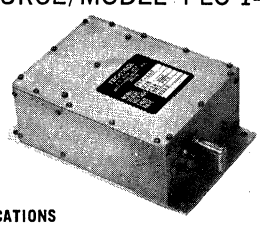
SPECIFICATIONS
Frequency Range: 300 MHz to 1 GHz.
±.001%, 0°C to +50°C; ±.003%, −20°C to +65°C.
12 VDC to 28 VDC operating voltage range (minus operating voltage available). Specify exact operating voltage.
30 dB spurious rejection.
SMA output connector standard (BNC, TNC, N, UHF connectors available).
Filter-con DC input solder pin).
Over voltage — reverse polarity protected.
Size (Approx): 4″L x 2″W x 1.375″H.

LOW COST CRYSTAL OSCILLATOR/MODEL 107



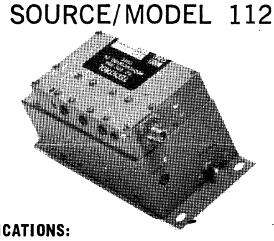
SPECIFICATIONS
Any discrete frequency between 1 GHz and 2.5 GHz.
±.001%, 0°C to +50°C; ±.003%, −20°C to +65°C.
50 ohms output impedance.
12 VDC to 28 VDC operating voltage range (minus operating voltage available). Specify exact operating voltage.
45 dB spurious rejection.
SMA output connector.
Filter-con DC input (solder pin)
Over voltage — reverse polarity protected.
Size (Approx): 4″L x 2″W x 2″H.
1 year warranty.
20 mW — 1 to 2.5 GHz, 15 mW — 2.5 to 3.5 GHz,

WIDE BAND PHASE LOCK SOURCE/MODEL PLC-140A



SPECIFICATIONS
Frequency Range: 400 MHz to 1500 MHz (Any 200 MHz Band).
Power Output: 20 mW.
Frequency Stability: ±.003%.
Temperature Range: 0°C to +50°C.
Subharmonic Rejection: −50 dBc.
Harmonic Rejection: −26 dBc.
Operating Voltage: +15 VDC.
Connector: SMA.
Size: 4″ x 3.375″ x 2″.

LOW COST MICROWAVE SOURCE/MODEL 112

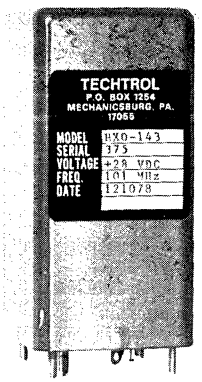


SPECIFICATIONS:
Frequency Range: 3 GHz to 6 GHz.
Frequency Stabiiity: ±.005%.
Temperature Range: 0°C to +50°C.
Power Output: 5 mW min., 10 mW typ.
Operating Voltage: +15 VDC.
Subharmonic Rejection: −35 dBc.
Harmonic Rejection: −50 dBc.
Size: 4″ x 2.1″ x 2″.

TECHTROL

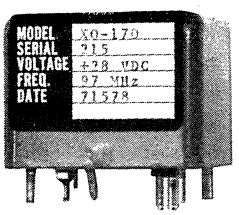
CRYSTAL OSCILLATORS

HIGH STABILITY/HXO-143



SPECIFICATIONS:
Frequency Range: 1 MHz to 600 MHz.
Power Output: +10 dBm, 50 ohms.
Frequency Stability: ±5 x 10^{-8}, 0°C to +55°C.
Aging Rate: ±1 x 10^{-7}/Day.
FM Noise: −105 dB, 100 Hz
−110 dB, 1 KHz
−140 dB, 10 KHz
−140 db, 100 KHz.
Harmonics: Less than 40 dBc.
Voltage: +15 VDC and +28 VDC.
Size: 2″ x 2″ x 4″.
Connector: SMA.

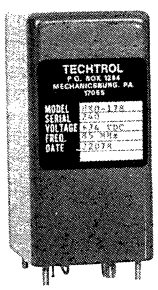
MODEL XO-170



SPECIFICATIONS:
Frequency Range: 1 MHz to 600 MHz.
Power Output: +10 dBm.
Frequency Stability: ±.003%, −20°C to +60°C
±.005%, −40°C to +70°C.
Harmonics: −40 dBc min.
Voltage: +5 VDC to +28 VDC (specify).
Size: 2″W x 2″L x 1.75″H.
Connector: BNC or SMA.

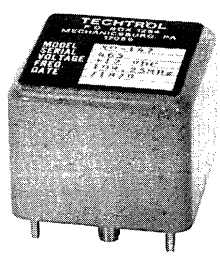
LOW PHASE NOISE

MODEL HXO-178



SPECIFICATIONS:
Frequency Range: 1 MHz to 600 MHz.
Power Output: +10 dBm.
Frequency Stability: ±5 x 10^{-8}, 0°C to +55°C.
Aging Rate: ±1 x 10^{-7}/Day.
FM Noise: −114 dB, 100 Hz
−135 dB, 1 KHz
−160 dB, 10 KHz
−169 dB, 100 KHz.
Harmonics: Less than −40 dBc.
Voltage: +15 VDC and +28 VDC.
Size: 2″ x 2″ x 4″.
Connector: SMA.

MODEL XO-147

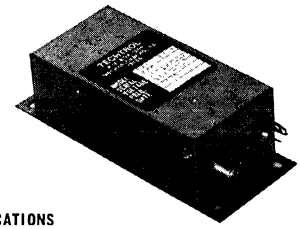


SPECIFICATIONS:
Frequency Range: 1 MHz to 600 MHz.
Power Output: +10 dBm min.
Frequency Stability: ±.003%, −20°C to +60°C
±.005%, −40°C to +70°C.
Harmonics: −20 dBc min.
Voltage: +5 VDC to +28 VDC (specify).
Size: 2″W x 2″L x 1.75″H.
Connector: BNC or SMA.

IF YOU HAVE SPECIAL REQUIREMENTS
CALL US.

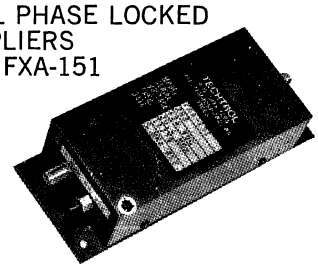
MULTIPLIERS

FREQUENCY MULTIPLIER USING DIRECT MULTIPLICATION MODEL FXA-217-1



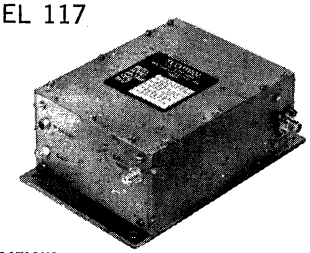
SPECIFICATIONS
Input Frequency: 10 MHz @ 0 dBm.
Output Frequency Range: X2 through X25.
Output Power: +10 dBm.
Power Stability: ±.5 dB, −20°C to +70°C.
Spurious Rejection: 60 dBc or greater.
Operating Voltage: +15 VDC @ 40 mA.
Size: 4″L x 2″W x 1.375″H.

DIGITAL PHASE LOCKED MULTIPLIERS MODEL FXA-151



Frequency Range: 10 MHz to 750 MHz.
Input Level: −20 dBc to +10 dBc, 50 ohms, 100 kHz to 10 MHz.
Power Output: +10 dBm min.
Lock Time: Approx. 50 ms.
Operating Temperature Range: 0°C to 50°C (−20°C to +75°C, optional).
Subharmonics: Less than −50 dBc (−70 dBc optional).
Harmonics: Less than −26 dBc (−60 dBc optional).
Output Impedance: 50 ohms.
VSWR: 1.5:1 max.
Output Connector: SMA.
Input Connector: SMA.
Operating Voltage: +15 VDC and +5 VDC.
DC Connector: Filter con.
Size: 4″L x 2″W x 1.375″H.
Mounting: Flange.

FREQUENCY MULTIPLIERS USING DIRECT MULTIPLICATION MODEL 117



SPECIFICATIONS
Frequency Range: 1 MHz to 8.0 GHz.
Band Width: Typically 1%, 1 dB; 3%, 3 dB.
Up to 10% available.
Power Input: 0 dBm ±3 dB. (Inputs from −10 dBm to +20 dBm ranges available).
Power Output: 0 dBm to +20 dBm.
Spurious Rejection: −60 dBc.
Harmonic Rejection: −40 dBc (Higher rejection available).
Subharmonic Rejection: −40 dBc (Higher rejection available).
Operating Voltage: +12 VDC to +28 VDC range (AC option available).
Header: Filter con — SMA.
Size: 4″L x 2″W x 1.375″H. Length depends on requirement.
Mounting: Flange

VECTRON

Clock Oscillators

TTL

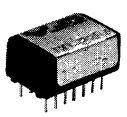
	PCB MOUNT	DIP COMPATIBLE		
Features:	*Broadest range of frequencies & options*	*14 pin DIP 0.35" high*	*14 pin DIP 0.28" high*	*Larger DIP but with freq. as low as 50 Hz*
Model:	**CO-231**	**CO-238A (B or T)**	**CO-234A (or B)**	**CO-235**
Frequency:	**CO-231:** 1 Hz-75 MHz **CO-231H:** 75.01-100 MHz	16 KHz thru 100 MHz	16 KHz thru 30 MHz	50 Hz thru 25 MHz
Output Level:	Drives 10 TTL loads (above 50 MHz drives 2 Schottky TTL loads)			
Supply:	5 VDC ±5%	5 VDC ±5%	5 VDC ±5%	5 VDC ±5%
Tuning Option Available:	*YES Models with "T" suffix include tuning adjustment with setability <.0001%	*YES (to 30 MHz)	NO	*YES
Accuracy: (at 25°C)	**CO-231:** ± .001% ***CO-231T:** ±.0001%	**CO-238A:** ± .005% **CO-238B:** ± .001% ***CO-238T:** ±.0001%	**CO-234A:** ±.005% **CO-234B:** ±.001%	**CO-235:** ± .001% ***CO-235T:** ±.0001%
Stability:	**Standard:** 0°C to + 70°C: ±.0025% Option 1: −55°C to + 85°C: ±.005% (−40/+85°C for CO-231-1 <60 Hz) Option 2: −55°C to +125°C: ±.005% (70 MHz max for CO-238-2) Option 3: 0°C to + 50°C: ±.0003% (24 KHz min for CO-238, CO-234) Option 4: 0°C to + 50°C: ±.0001% (only for CO-231 in 12 KHz-20 MHz range) Option 5: 0°C to + 50°C: ±.0005% (100 Hz min for CO-235) Option 6: 0°C to + 50°C: ±.001% Option 8: 0°C to + 70°C: ±.01% (includes initial accuracy; A, B & T are N/A) Option Y: Aging improved from 5 to 1 ppm/year typical			
Size:	1½" x 1½" x ½" 38 x 38 x 12.7 mm	.5" x .8" x .35" 12.7 x 20.3 x 8.9 mm	.5" x .8" x .28" 12.7 x 20.3 x 7.1 mm	1½" x 1½" x ½" 38 x 38 x 12.7 mm
Option C:	Fully sealed metal can for 100% r.h. requirements — results in slight height increase. Not available in CO-235. Not available with tuning option in CO-238.			

ECL

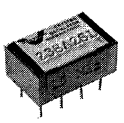
	PCB MOUNT		DIP COMPATIBLE
Features:	*To 200 MHz*	*To 500 MHz Sub-nanosecond*	*14 pin DIP*
Model:	**CO-233ME** **CO-233MEHA (or B)**	**CO-533KE** **CO-533ME**	**CO-633A (or B)**
Frequency:	**ME:** 5-149 MHz **MEH:** 150-200 MHz	150 MHz thru 500 MHz	5 MHz thru 200 MHz
Output Level:	ECL compatible	100K sub-nanosecond Complementary ECL	ECL compatible
Supply:	−5.2 VDC ±5%	**CO-533KE:** −4.5V **CO-533ME:** −5.2V	−5.2 VDC ±5%
Tuning Option Available:	*YES (to 150 MHz)	*YES	NO
	*Tuning setable to .0001% with "T" suffix		
Accuracy: (at 25°C)	**CO-233ME:** ±.001% ***CO-233MET:** ±.0001% **CO-233MEHA:** ±.005% **CO-233MEHB:** ±.001%	**CO-533KE/ME:** ±.001% ***CO-533KET/MET:** ±.0001%	**CO-633A:** ± .005% **CO-633B:** ± .001%
Stability:	**Standard:** 0/+ 70°C: ±.0025% **Option 1: −55/+ 85°C: ±.005% **Option 2: −55/+125°C: ±.005% ***Option 3: 0/+ 50°C: ±.0003% Option 5: 0/+ 50°C: ±.0005% Option 6: 0/+ 50°C: ±.001% Option 8: 0/+ 70°C: ±.01% (includes accuracy) Option Y: Aging improved from 5 to ppm/year typical **−30/+85°C limit for **CO-233ME(MEH)** or **CO-633** >125 MHz ** 0/+85°C limit for **CO-533KE/ME** ***Not available 150 MHz and above in **CO-233MEH** or **CO-633**		
Size:	1½" x 1½" x 5/8" (38 x 38 x 16 mm)	2" x 3" x ¾" (51 x 77 x 19 mm)	.5" x .8" x .42" (12.7 x 20.3 x 10.7 mm)
Option C:	Fully sealed metal can		

CMOS

	PCB MOUNT	DIP COMPATIBLE	
Features:	*Broadest range of frequencies and options*	*14 pin DIP*	*Larger DIP package but freq. as low as 60 Hz*
Model:	**CO-236**	**CO-636A (or B)**	**CO-536**
Frequency:	.01 Hz thru 15 MHz	3 MHz thru 15 MHz	60 Hz thru 15 MHz
Output Level:	Output derived from CMOS gate or divider with p-p >80% of Vcc (can furnish >95% of Vcc if required)		
Supply:	5-15 VDC for frequencies below 6 MHz; 10-15 VDC above 6 MHz 1-2 ma typical below 2 MHz		
Tuning Option Available:	*YES *Models with "T" suffix include tuning with setability <.0001%	NO	*YES
Accuracy (at 25°C):	**CO-236:** ± .001% ***CO-236T:** ±.0001%	**CO-636A:** ±.005% **CO-636B:** ±.001%	**CO-536:** ± .001% ***CO-536T:** ±.0001%
Stability:	**Standard:** 0/+ 70°C: ±.0025% Option 1: −40/+ 85°C: ±.005% Option 2: −55/+125°C: ±.005% Option 3: 0/+ 50°C: ±.0003% (6 MHz min for CO-636) Option 4: 0/+ 50°C: ±.0001% (only CO-236 >200 Hz) Option 5: 0/+ 50°C: ±.0005% (4 MHz min for CO-636) Option 6: 0/+ 50°C: ±.001% Option 8: 0/+ 70°C: ±.01% (includes accuracy) Option Y: Aging improved from 5 to 1 ppm/year typical		
Size:	1½" x 1½" x ½" 38 x 38 x 12.7 mm	.5" x .8" x .42" 12.7 x 20.3 x 10.7 mm	1½" x 1½" x ½" 38 x 38 x 12.7 mm
Option C:	Fully sealed metal can; results in slight height increase. Not available in CO-536.		



Standard DIP



Sealed DIP (Option "C")

PCB Mount

HOW TO SPECIFY MODEL NUMBER . . .

CO— □ □ □ □ — □ □ at ☐

- Basic Model
- Accuracy or tuning option (leave out if not applicable)
- "C" if metal sealed for 100% rh (leave out if not applicable)
- Stability option (leave out if "Standard")
- Frequency

If one of these standard models, with listed options, does not meet your requirements, please detail the differences from the closest standard model (e.g. CO-231 except for temperature stability of ±.002% over −10°C/+60°C). A unique part number will be assigned at time of order.

VECTRON

Screen Tested Clock Oscillators

Each of the Clock Oscillators described above (except for CO-235 and CO-536) are available in a full sealed metal can; simply add "C" to the Model No. (e.g. CO-238B-1C).

For those high reliability applications requiring Screen Tested components, Vectron offers the same oscillators:

- 100% Screen Tested as follows:
  - (A) Thermal Shock per MIL-STD-202 Method 107D, Test Condition A
  - (B) Seal Test per MIL-STD-202, Method 112B, Test Condition D
  - (C) Burn-in for 168 hours at maximum specified operating temperature
- Packaged in fully solder sealed metal housing
- Ruggedized for shock and vibration

Environmental Characteristics of Vectron Oscillators

Operating Temperature: per temperature stability specification (from 0/50°C to −55/+125°C depending upon model/option selected)

Storage Temperature: −55°C to +85°C (to 125°C available)

Altitude: sea level to space

Orientation: any

Humidity: 100% for fully sealed models. 90% for non-sealed models, but these can either have internal boards conformally coated for 95% r.h., or be repackaged in fully solder sealed housings for 100% r.h.

Shock: 30g, 11 msec per MIL-STD-202, Method 213, Test Condition J, is standard. (100g shock optionally available in all models, and capability to withstand even more severe shock available in some models.)

Vibration: 10-55 Hz, .06″ DA per MIL-STD-202, Method 201A, and 5g to 500 Hz is standard. (Vibration to 20g thru 2 KHz per MIL-STD-202, Method 204, Test Condition A, B, C or D optionally available in all models, and capability to withstand even more severe vibration, sinusoidal or random, available in some models.)

NOTE: Vectron has produced oscillators for airborne, shipboard, manpack, mobile, spacecraft, rocket and missile applications.

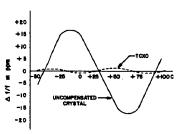
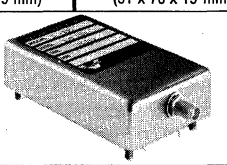
Output Level & Frequency:	TTL: 50 Hz -20 MHz CMOS: 50 Hz -15 MHz SINE: 1 MHz-20 MHz		SINE: 20 MHz-140 MHz TTL: 20 MHz-100 MHz ECL: 20 MHz-140 MHz	SINE: 140 MHz-400 MHz ECL: 140 MHz-280 MHz
Supply:	Any supply voltage in 5-28 VDC range; current as low as 3 ma for some models			12-28 VDC
Frequency Adjustment:	Screwdriver adjustment, setable to 1 x 10-7. Electronic tuning (TC/VCXO) capability optional.			
Aging Rate:	5 x 10-7 to 1 x 10-6 per year		1 to 2 x 10-6/year	1 to 2 x 10-6/year
Size:	2″ x 2″ x ¾″ (51 x 51 x 19 mm) smaller size available		2″ x 2″ x ¾″ (51 x 51 x 19 mm)	2″ x 3″ x ¾″ (51 x 76 x 19 mm)

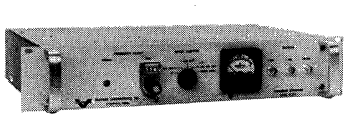




Selecting Basic Model:
1. Determine appropriate column by frequency desired.
2. Determine appropriate row by operating temperature range desired.
3. Select a basic model from those available at the desired frequency and temperature range.
4. Specify supply voltage, output level and whether pcb mount or chassis mount with rf connector.

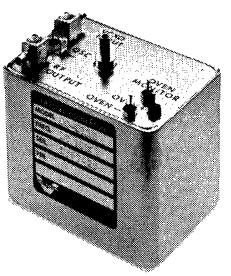
VECTRON Frequency Standards

Model:	**FS-321B**	**FS-323A**
Aging Rate:	3 x 10-10 per day at time of shipment 1 x 10-10 per day typical within 60 days "—1" OPTION 1 x 10-10 per day at time of shipment	
Frequencies:	5, 1 & 0.1 MHz	
Output Level:	1 vrms/50 ohms	
Temperature:	±5 x 10-10 over 0-50°C	
Noise Floor:	>150 db below 5 MHz output	
Oven Control:	Double proportional	
Supply:	115/230 VAC or 22-30 VDC	115/230 VAC or 22-30 VDC
Battery Life:	24 hours rechargeable	None
Size:	5¼″ x 19″ x 14″ (13.4 x 48.3 x 35.6 cm)	3½″ x 19″ x 14″ (8.9 x 48.3 x 35.6 cm)



VECTRON Replacement for Hewlett Packard Model 10811B

Vectron type CO-811B offers mechanical and electrical-interface interchangeability with discontinued HP10811B



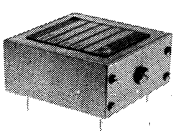
Aging:	5x10-10/day 1x10-7/year
0/+71°C: **−55/+71°C:**	2.5x10-9 p-p 4.5x10-9 p-p
Noise:	100 Hz: −140dBc/Hz 10 KHz: −160dBc/Hz
Crystal:	SC-cut for fast stabilization

VECTRON Hybrid Oven Low Profile Oscillator

- PCB Mounting
- Small (1″ high)
- Low power drain

CO-311 SERIES

Stability:	Same aging and temperature stability specs as CO-211 Series (see top of next page)
Output: **TTL** **CMOS** **SINE**	**Frequency Range** 250 KHz - 17 MHz 4-6 & 8-15 MHz 4-6 & 8-17 MHz
Supply:	15 VDC for oscillator 5 VDC also, if TTL out (5-28 VDC optional)
Input Power:	3 watts at turn-on 1.3 watts stabilized (25°C)
Frequency Adjust:	Mechanical; electronic optional
Size:	2¼″ x 2¼″ x 1″ (58 x 58 x 26mm)



VECTRON Oven Controlled Oscillators (with Ultra-Low Noise Options *)

High Frequency (to 25 MHz)

	HIGH STABILITY (to 5 x 10^{-10}/day)			ULTRA-STABLE (to 1 x 10^{-10}/day)	
	Most economical CO-211 SERIES	**Higher stability and output CO-200 SERIES**	**Superior temp. stability CO-244 SERIES**	**Best aging: single oven CO-206 SERIES**	**Best aging: double oven CO-246 SERIES**

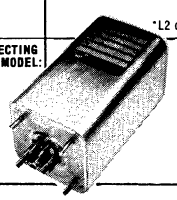
50 KHz	−145 dB/Hz	−150 dB/Hz	−163 dB/Hz

*L2 option restricted to CO-200 Series with sine output of +10 dBm or less

Offset from Carrier	Standard	*Ultra-Low Noise Option (L2)
10 Hz	−115 dB/Hz	−140 dB/Hz
100 Hz	−135 dB/Hz	−150 dB/Hz
1 KHz	−145 dB/Hz	−155 dB/Hz
10 KHz	−148 dB/Hz	−160 dB/Hz
50 KHz	−150 dB/Hz	−163 dB/Hz

*L2 option restricted to +10 dBm or less output



SELECTING BASIC MODEL:

1. Select "Ultra Stable" if 3 x 10^{-10}/day aging or better is required; otherwise select "High Stability".
2. Select operating temperature range required (**A, B, D** or **G** from left column under "Temperature").
3. Select frequency stability desired over temperature, this determines the oscillator. (Temperature stability improves from left to right).
4. Select desired aging rate within Series to complete basic model number.
5. Determine whether you desired a low-noise option or any characteristic which is not standard (e.g., supply voltage, output level, etc.).

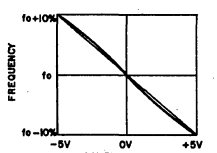
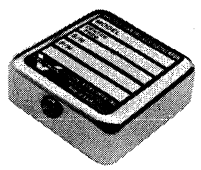
Supply Voltage:	+15 VDC (Operation from any supply in 12 to 28 VDC range is optional.)		+15 VDC
Size:	2" x 2" x ¾" (51 x 51 x 19 mm)	2" x 2" x 4" (51 x 51 x 104 mm)	2" x 2" x ¾" (51 x 51 x 19 mm)
Mounting:	Pins for p.c. board mounting, RF connector optional.	Chassis mount with SMA output connector. SMC or BNC optional	Pins for p.c. board mounting.





VECTRON LABORATORIES, INC. The CRYSTAL OSCILLATOR COMPANY
166 Glover Avenue, Norwalk, CT 06850 • Telephone: 203/853-4433 • TWX: 710/468-3796

XSIS ELECTRONICS

ADVANCED DESIGN MICROCIRCUIT CRYSTAL OSCILLATORS

- QPL To MIL-0-55310
- ± .0015% CALIBRATION ACCURACY
- HERMETICALLY SEALED METAL PACKAGE
- .200 SEATED HEIGHT
- LOW POWER CONSUMPTION
- WIDE FREQUENCY RANGE
- VARIETY OF STABILITIES
- MULTIPLE TEMPERATURE RANGE SELECTION
- TTL-CMOS-GATED SCHOTTKY-ECL
- CUSTOM PACKAGE CONSIDERATIONS
- DUAL-IN-LINE SPACING
- CUSTOM ELECTRICAL PARAMETERS

XSIS microcircuit crystal oscillators are not "JUST ANOTHER CLOCK OSCILLATOR" but are hi-rel devices using a premier design that is documented to be virtually without failure. Customers call it EXPERIENCED RELIABILITY.

XSIS microcircuit oscillators are manufactured to the electrical parameters of MIL-0-55310, workmanship standards are in accordance with MIL-M-38510, the quality system is as required by MIL-I-45208.

XSIS IS A QPL SOURCE FOR MICROCIRCUIT CRYSTAL OSCILLATORS TO MIL-0-55310/8,/11,/14,/15,/16,/17.

Time to order from the leader and pioneer in Delay Line Technology

Technitrol's three and one half decades of experience in designing and manufacturing delay line modules is recognized and appreciated throughout the world. This experience ranges from supplying the simplest commercial unit to the most rugged military chip carrier module. Manufactured in numerous compact configurations, these units provide timing applications with minimum or no interface requirements whatsoever.

When you order from Technitrol you will receive quality products from the pioneer and worldwide manufacturer of TTL and ECL chip carrier delay modules, as well as digital, slim pac, dual-in-line, single-in-line and low profile delay modules. All modules are designed to be used directly with Schottsky TTL, TTL, and low power Schottsky TTL logic circuits. All modules are designed to meet or exceed MIL-D-23859 as a minimum specification and all can be cascaded to get any combination of delay without degrading output rise time.

At Technitrol, reliability is built into all our delay line modules—not "screened in"—as is the case of many of our competitors. So remember, you can't go wrong if you specify Technitrol for your next commercial or military application requirement . . . you can't miss if you order from the #1 company in delay line technology.

SPIRADEL®* THE MOST COMPACT Highest Time Delay to Rise Time Ratio DISTRIBUTED DELAY LINE

FOR IMMEDIATE DELIVERY!

SPIRADEL is a small diameter, distributed constant fixed delay line, featuring higher delay to rise time ratio and excellent pulse fidelity. Its new shape offers greater package design versatility than most other delay lines available, and the entire unit is encapsulated for maximum environmental protection.

SPIRADEL covers a delay range of 20 to 6000 nanoseconds. Any delay within this range may be selected.

Time delay to rise time ratios range up to 30 to 1. Any impedance from 50 to 1000 ohms is available. Standard delay tolerance is 5%, although tighter tolerances can be held.

SPIRADEL is designed for operation from −55°C up to +105°C. Temperature coefficient over this range is 150 parts/million/°C. Bandwidth is from DC to frequency f = .35/rise time.

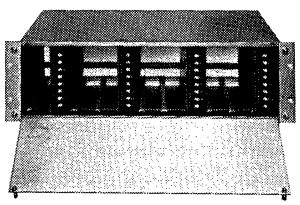
THE MOST COMPLETE LINE OF
VIDEO DELAY LINES AVAILABLE FROM STOCK!

Allen Avionics, an established leader in the design and manufacture of Electromagnetic Delay Lines and L-C Filters has now developed a specialized group of products for the video market.

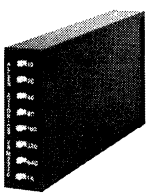
In color television broadcasting, accurate timing of signals is essential. This was initially achieved by the use of 75 ohm coaxial cable. The cost in time and materials to accomplish precise trimming and the lack of a rapid and convenient method of changing delays is currently responsible for the decline in cable usage. Television studios, studio equipment manufacturers and others engaged in the video industry are changing from 75 ohm cable to a more suitable method of achieving precise short delays. Allen Avionics now offers a line of Video Units for this purpose. Their use will result in a reduction of size, weight, installation cost and an overwhelming saving in time and effort to make delay changes.

RACK MOUNTABLE UNITS



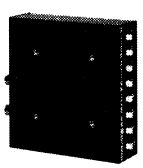
RACK MOUNT showing delay units with switches and terminals available for delay changes. Up to 10 delay units can be housed. Note hinged front panel.

This rack mountable series of video and pulse delay lines has the capability of replacing up to 1450 feet of cable.



Showing 8 individual slide switches for rapid delay changes.

Four variable slide switch units are being offered with total delays of 255, 637.5, 1275 and 2270 nanoseconds. Each unit contains 8 individual delay units. **Four strappable units** are also manufactured with total delays of 317.5, 635, 1270 and 2260 nanoseconds. The strappable units consist of 7 separate delay lines each having their own input and output terminals. The slide switches or terminal strapping provide methods for adding the individual lines together so that the output is always the summation of the individual lines. This eliminates most video distortions and assures good chrominance to luminance delay. Precision delay changes of as small as one nanosecond are easily accomplished. Low insertion loss, amplitude and delay flatness, along with excellent pulse fidelity, are characteristic of this series.



Units are rack mounted by attaching a durable plastic card to the large surface.

All units are manufactured to fit standard 19 inch racks and are provided with additional inserts to satisfy almost any mounting requirement. Delay units and racks can be purchased separately. The rack is manufactured with a hinged panel so that fast delay adjustments can be made. However, once adjustments are made, the front panel prevents further tampering with the slide switches or terminals.

Models VP0635, VP1270 and VP2075 are padded to provide a flat loss at any setting. As a result of this padding, these units will exhibit a maximum variation of ±.2db at any delay setting.

Model VP0010 was designed specifically to be used as a delay trimmer in conjunction with our other delay units or any 75 ohm system. It offers .5 nanosecond switching resolution with excellent amplitude flatness up to 5.5 MHz.

These new delay units feature extremely flat amplitude response to 5.5 MHz, small increments of delay variation, low signal distortion and tight delay tolerance. The delay networks are ideal for pulse applications because of their fast rise times and low distortion. Amplitude equalization is employed to achieve excellent flatness over the video frequency range. The delayed output of any model in this group is the summation of individual lines. It is not the result of a tapped line. This feature insures that output pulse distortions are minimized. Units will match to any 75 ohm system and can be directly connected into the video signal path by means of BNC connectors.

Part No.	Delay Range (Nano-Sec.)	Delay Steps (Nano-Sec.)	Method of Variation	Maximum Insertion Loss @ 100 KHz (db)	Amplitude Flatness At Any Delay Setting 100 KHz to 5.5 MHz (db)	Max. Rise Time (Nano-Sec.)	Package Size (Inches)

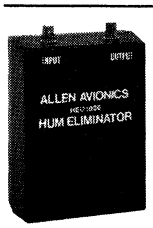
Impedance: 75 ohms. * ±.2 db variation at any delay setting.
Pulse Distortion: Less than 4% with an input pulse rise time of 20 nanoseconds.
Working Voltage: 50 volts maximum.
Return Loss: 20 db minimum.
Delay Tolerance: 5% or 1 nanosecond, whichever is greater.



HUM ELIMINATOR HEC1000

Eliminates Hum & other interference in Video Lines caused by differences in ground potential.

- FLAT-DC to 10 MHz.
- For Color and Black & White.
- No Low Frequency or High Frequency Roll-Off.
- No Differential Gain or Phase Distortion.
- Totally Passive Device — Failure Free.
- Reversible
- Compact Rugged Package.
- Low Price.

IN FIELD:
Between Remote Truck & Telco & between Truck & Microwave.
For Intertruck Hookup.
For VTR Units & Monitoring Lines.

IN STUDIO:
Between Buildings & Studios & Studios & Transmitter.
On incoming & outgoing Telco Circuits.

SPECIFICATIONS
Impedance: 75 ohms, unbalanced
Connectors: Type BNC
Bandwidth: DC to 10 MHz (0.6 dB @ 10 MHz)
Hum Reduction: to 50 dB depending on system
Dimensions: 5.3" x 4.0" x 2.0" (135 x 102 x 51 mm)
Weight: Approx. 3 lbs. (1.36 kg)
Insertion Loss: <0.2 dB

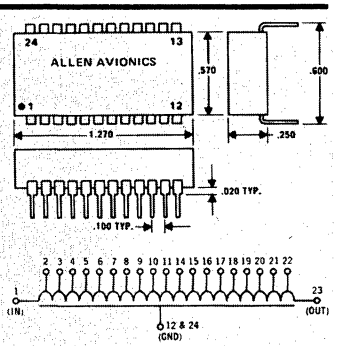
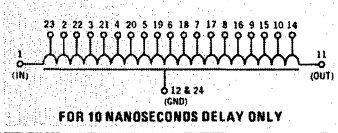
- Time delay to rise time ratios — 10 to 1.
- Temperature Coefficient — less than 100PPM/°C from 0°C to 80°C.
- Total delay tolerance 5% or 1 nanosecond, whichever is greater.
- 20 equal delay increments.
- TTL & DTL compatible.
- Low attenuation.
- Excellent pulse fidelity.
- Exceeds applicable portions of MIL-D-23859.
- Voltage rating 50 WVDC.

Where high bandwidths and low rise times are required in a small package, the "LC DIP 20" excels. It offers excellent pulse fidelity and low attenuation. Its compatibility with TTL & DTL along with its low profile makes for an extremely popular and adaptable unit for semiconductor and other related applications. Other delays and impedances are available on special order.



FOR DELAYS FROM 20 – 1000 NANOSECONDS



FOR 10 NANOSECONDS DELAY ONLY

THE ULTIMATE IN MINIATURIZATION

T05 SERIES LUMPED CONSTANT DELAY LINE

Lumped Constant, completely passive, delay lines housed in a commercial T05 package (.385 dia. x .330 high). Designed for compatibility with semiconductor and logic assemblies where space and good performance are prime considerations. Stocked in delays from 10 to 100 nanoseconds.

Delay Tolerance: ±5%.

Working Voltage: 50 volts DC.

Temp. Coefficient Over 0 to 80°C: 100 parts/million/°C.

"LC DIP" THE WORLD'S SMALLEST DUAL-IN-LINE 14 PIN TAPPED LUMPED CONSTANT DELAY LINE

The "LC DIP" represents the smallest delay line currently available. It is a lumped constant delay line offering the ultimate in high density packaging and tapping capabilities.

These units are excellent for high frequency applications. The availability of 10 equal delay increments and the dual-in-line packaging along with its low silhouette make for compatibility with semiconductor and other assemblies where circuit board height must be held to a minimum. The foregoing makes the "LC DIP" extremely adaptable for the computer and allied industries.

Delay Tolerance:

For delays less than 50 nanoseconds: ±10% or 1 nanosecond (whichever is greater).

For delays of 50 nanoseconds or more: ±5% or 4 nanoseconds (whichever is greater).

ATTN. COMMUNICATION FIELD: VARIABLE DELAY for RADIO PAGING

In recent years, the communication industries have directed a good deal of attention to the development of devices suitable for delay correction of signals sent to remote transmitters. Paging systems use this form of delay correction and are one of the popular fields to employ these delay units.

Total Delay Tolerance 5%.
Impedance 600 ohms unbalanced.
Bandwidth — greater than 3.2 KHz.
Units are supplied in metal can 2 x 3½ x 5 inches.
Four 8/32 inserts and the switch are located on one of the 2 x 3½ inch surfaces.
Four turret terminals (input, output and 2 grounds) are located on the opposite 2 x 3½ inch surface.

PART NO. AV-1031-0-1100

Total Delay Tolerances 5% — Insertion Loss 6db

This unit has two rotary switches. One rotary adjusts the delay in steps of one hundred microseconds for a total of 1000 microseconds. The second switch steps the delay up in 10 microsecond increments to 100 microseconds.

All delay outputs are the summation of individual lines. Impedance is 600 ohms unbalanced. Bandwidth for total delay of 1100 microseconds is greater than 3.2 KHz. Units are supplied in a metal can 2" x 11" x 4". Four inserts and 2 switches are located on one of the 11" x 2" surfaces. Four turret terminals (input, output and 2 grounds) are located on the opposite 11" x 2" surface.

PART NO. AV-1031R-0-1100

Same as above except designed for 2 adjacent units to be rack mounted. Size: 3" x 8" x 8".

SERIES "HF", "HR" & "VHR" LUMPED CONSTANT DELAY LINES HIGHEST $\frac{\text{TIME DELAY}}{\text{RISE TIME}}$ RATIO EVER BUILT!

These Delay Lines have the highest ratio of time delay to rise time that has ever been built in a Lumped Constant Line. Unlike other types of high ratio lines, the Lumped Constant Delay Line has a passband from D.C. to its cutoff frequency and maintains a constant delay over these frequencies. These lines are also unique in that they offer relatively low insertion loss. The units are characterized by tight time delay tolerances, low pulse distortion, excellent phase linearity and good temperature stability.

To calculate rise time in microseconds, divide the ratio into the delay. To calculate bandwidth, divide rise time in microseconds into .36. Answer will be in MHz. Attenuation range 9 to 20db.

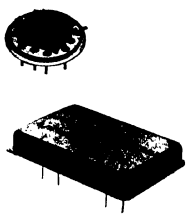
"HF"	"HR"	"VHR"
50/1 RATIO Delay Range .25 to 10 microseconds.	100/1 RATIO Delay Range 11 to 500 microseconds.	150/1 RATIO Delay Range 5 to 500 microseconds.
75/1 RATIO Delay Range .5 to 10 microseconds.	130/1 RATIO Delay Range 5 to 500 microseconds.	200/1 RATIO Delay Range 10 to 75 microseconds.
100/1 RATIO Delay Range 1 to 10 microseconds.		250/1 RATIO Delay Range 20 to 100 microseconds.

EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides. There are 33 Guides in this edition of EEM. See page 2 (1•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.

SAW Bandpass Filters:

Optimum amplitude and phase characteristics for radar, ECM, ESM and communications filtering.



Range of Performance	
Center Frequency	20-600 MHz
1 dB bandwidth	100KHz to 40% f_o
Rejection bandwidth	Δf + 600 KHz min
Transition bandwidth	300 KHz min
Shape factor (1 dB to 40 dB)	1.1 min
Insertion Loss	10 dB to 30 dB, 20 dB typical
Rejection level	30 dB to 55 dB, 40 dB typical
Amplitude ripple	±.2 dB to ±.5 dB, ±.3 dB typical
phase deviation from linear	±2° to ±5°, ±3° typical

SAW and IMCON Dispersive Delay Lines:

The powerful signal processing tool for radar, ELINT, ESM receivers

	SAW ID	SAW RAC	IMCON
Center Frequency	1000 MHz	1000 MHz	30 MHz
Bandwidth	<50% f_o	<50% f_o	<50% f_o
Dispersion	<50 μs	< 100 μs	< 600 μs
Time Bandwidth Product	< 2000	< 4000	< 4000
Sidelobes	30 db	35 db	40 db
Insertion Loss	30-50 db	30-50 db	20-40 db
Oven	No	Yes	Yes

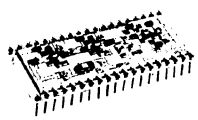
Frequency Synthesizers:

Unique design provides optimized programmable frequency source for today's most demanding applications including radar, radios, telecommunications, TACAN, telemetry, navigational equipment and satellite communications.

Frequency Output	.25 to 5 GHz
Stepping Bandwidth	600 MHz
Non Harmonic Spurious Harmonic Spurious	− 60 dBc − 35 dBc
Output Power	+ 23 dBm
Phase noise	− 60 dBc at 10 Hz
Compact/Cavity Free	

SAW Hybrid Oscillators:

Compact, rugged, alignment-free frequency sources available in standard industry packages for PC mounting. Two types available:



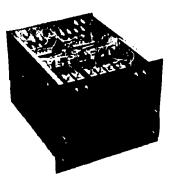
SAW Delay Line Voltage Control Oscillators SAW Resonator Stabilized Oscillators	
Fundamental Frequency Output	.1 to 1.1 GHz
Non Harmonic Spurious Harmonic Spurious	− 50 dBc − dBc
Output Power	+ 10 dBm min. into 2:1 load

Bulk Acoustic Wave (BAW) Delay Lines and Subsystems:

Practical and economical memory for radar, communications and TV signal processing.

Glass
Frequency 5 to 60 MHz
Bandwidth to 30 MHz
Delay 2 to 250 μs
Zero temperature coefficient

Quartz
Frequency 5 to 100 MHz
Bandwidth to 50 MHz
Delay 1 μs to 4.8 ms
Multiple channel assemblies



Radar MTI

Acousto-Optic Products:

Controlling laser energy in computer printing and semiconductor processing.

Modulators
UV, visible, near infrared
Modulation bandwidth to 20 MHz
Contrast ratio in excess of 1000 to 1
Deflection efficiency greater than 85%
Drivers available

Beam Deflectors
UV, visible, near infrared
Resolution to 300 spots
Access time 300 ns to 10 μs
Drivers available

Q-Switches
Available for all commercial YAG lasers
For up to 50 watt CW laser power output

ANDERSEN LABORATORIES

bel defining a degree of excellence

series 0447 DIGITAL

14 PIN 5 TAP

TECHNICAL INFORMATION

Bel Fuse Digital Delay Lines Series 0447 features five equally tapped delay lines with total delays of 25 to 500 nanoseconds. The lines are compatible with TTL and DTL circuits. Either Logic "1" or Logic "0" inputs are accepted. Cascading of units causes no undesirable reflections. The reduced dimensions, with standard Dip Pin-Out permits dense packaging on your circuit board.
Special designs upon request.

INPUT TEST CONDITIONS

Pulse Voltage	3.2 Volts
Rise Time	3.0 Nsec.
Supply Current	60 ma TYP
Pulse Width	Min. of 40% delay

ELECTRICAL CHARACTERISTICS

Supply Voltage Vcc	4.75 to 5.25 Volts
Logic 1 Input Current	50 Microamps Max.
Logic 0 Input Current	−2 Milliamps Max.
Logic 1 Output Voltage	2.6 Volts Min.
Logic 0 Output Voltage	.5 Volts Max.

All Measurements Made at VCC = 5.0 Volts @ 25°C

DRIVE CAPABILITIES

Logic 0 Output	10 TTL Loads/Tap Max. (20 TTL) Loads/Unit Max.)
Logic 1 Output	10 TTL Loads/Unit Max.

- COMPATIBLE WITH TTL AND DTL CIRCUITS
- DELAY TOLERANCE ± 2Nsec or 5% WHICHEVER IS GREATER OFF NOMINAL DELAY
- OPERATING TEMPERATURE RANGE 0°C TO 70°C
- OTHER DELAYS UPON REQUEST

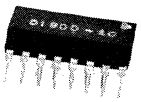
FIXED AND TAPPED DELAY LINES

SUB-MINIATURE DUAL-IN-LINE TAPPED LUMPED CONSTANT LINES

Each line has 10 tap delays spaced at equal intervals. Attenuation less than 1 dB. Temp. Coeff. less than 50 PPM/°C. DIP configuration compatible with automatic inserting equipment. Commercial and MIL Spec. models available.



MODEL	DELAY RANGE	RISE TIME OR FREQ. RESP.	IMPED-ANCE OHMS	SIZE INCHES
D1900-10	10 Nsec	2 Nsec	100	.21 x .30 x .78

D1511-10	100	33		

MINIATURE LUMPED CONSTANT

Hermetically sealed in a metal container. Delay tolerance ±5%. Temperature stability less than 50 PPM/°C, P.C. Mounting.

D647-110	50 Nsec	12 Nsec	50	.30 x 1.0 x 1.25
D647-211	100	12.5	50	.30 x 1.0 x 2.45

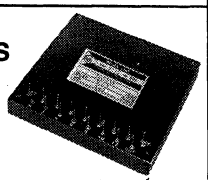
D647-338	4,350	360	500	.30 x 1.0 x 3.45

ATC TRANSPONDER AND BEACON CODING DELAY LINES

Standard 1.45 μsec tap spacings plus other special delay points are provided. Hermetically sealed steel cased, plastic encapsulated and P.C. mounted units are offered.

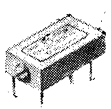


D1560	10.15 μsec	.33 μsec	400	.55 x 2.25 x 3.62
D1365	20.3	.5	180	.87 x 3.5 x 3.5
D1000	20.3	.5	330	.35 x 2 x 4
D120	25.0	.55	180	.75 x 5 x 4.37
D298A	25.3	.6	500	1.62 x 2.87 x 4.25
D637	20.3	.3	180	2.37 x 2.75 x 3.18
D1190	20.3	.4	400	.63 x 4 x 5
D1191	24.65	.5	500	.63 x 4 x 5
D1210	8.0	.5	500	5 x 1 x 4

VARIABLE DELAY LINES

DUAL-IN-LINE COMPATIBLE VARIABLE DELAY LINES

Sealed in plastic case. Temp. coeff. less than 50 PPM/°C. .020″ P.C. mounting pins.



V1570-1	0 - 10 Nsec	2 Nsec	100	.25 x .75 x 1.5
V1570-2	0 - 20	4	100	.25 x .75 x 1.5
V1570-3	0 - 40	8	100	.25 x .75 x 1.5
V1570-4	0 - 80	16	100	.25 x .75 x 1.5
V1570-5	0 - 160	32	200	.25 x .75 x 1.5
V1570-6	0 - 320	64	200	.25 x .75 x 1.5

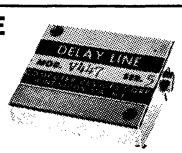
MIL VERSION

Hermetically sealed in a metal case.

V1768-1	0 - 10 Nsec	2 Nsec	100	.25 x .87 x 1.6
V1768-2	0 - 20	4	100	.25 x .87 x 1.6
V1768-3	0 - 40	8	100	.25 x .87 x 1.6

MINIATURE LUMPED VARIABLE Nanosecond Range

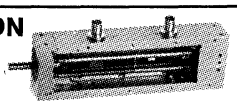
Hermetically sealed in a metal case. Lumped constant parameter. Temperature coefficient less than 50 PPM/°C. .030″ P.C. mounting pins.



V447-1	0 - 55 Nsec	15 Nsec	150	.31 x 1 x 1.25
V447-2	0 - 100	30	50	.31 x 1 x 1.25
V447-3	0 - 150	25	150	.31 x 1 x 2.45
V447-4	0 - 250	30	50	.31 x 1 x 2.45
V447-5	0 - 300	30	150	.31 x 1 x 3.45
V447-6	0 - 500	60	50	.31 x 1 x 3.45

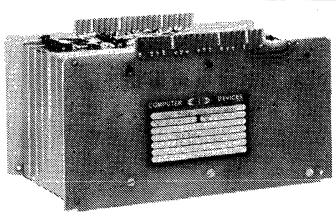
NOVEL INFINITE RESOLUTION

With input and output impedance of equal value. Voltage standing wave ratio less than ½ db to 45 MHz.



DV575-1	2 - 25 Nsec	70 MHz	200	1 x 1.25 x 5.37
DV575-2	2 - 50	70	100	1 x 1.25 x 5.37
DV575-3	2 - 50	70	200	1 x 1.25 x 5.37
DV575-4	2 - 50	70	93	1 x 1.25 x 5.37
DV575-5	2 - 25	70	50	1 x 1.25 x 5.37
DV575-6	2 - 50	70	93	1 x 1.25 x 5.37

DELAY LINE COMPUTER MEMORIES DELCOMS



THE DELAY LINE COMPUTER MEMORY (DELCOM) offers the **Lowest Price Per Bit** of any high speed memory device. Computer Devices Corp. offers convenient standard packages for all practical storage capacities from 10 bits to 20,000 bits in single delay line units as well as multi delay line units with massive storage capacities. All Delcoms are compatible with DTL and T^2L logic. Normal power requirements are +12 and −12 VDC and +5 VDC. However, Delcoms are tailored to your bit rate, delay, input-output logic and power requirements.

MANY OTHER MODELS AND SPECIALTY Delay Lines are available. If exactly what you want is not listed, please call.

COMPUTER DEVICES CORP.

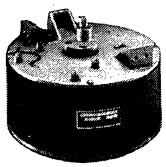
military & commercial

DELAY LINES

WITH OR WITHOUT CIRCUITRY

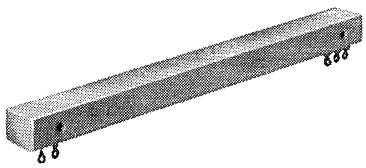
MAGNETOSTRICTIVE ★ LUMPED CONSTANT ★ ULTRASONIC ★ DISTRIBUTED CONSTANT ★ DISPERSIVE STRIP

MAGNETOSTRICTIVE DELAY LINES — Fixed and variable delays to 10,000 microseconds. Fixed — FMS Series; Variable — VM Series.



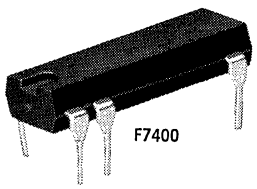
VARIABLE MAGLINE

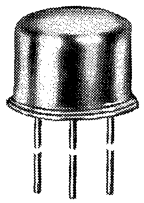
Delays up to 4000 μsec variable. Infinite resolution. Excellent temperature stability. Typical use — Radar range calibration.



ULTRASONIC DELAY LINES — Replaces most quartz or glass lines. Offers superior performance, lower attenuation and smaller size at less cost. Frequencies to 30 MHz. Delays to 200 usec and greater.

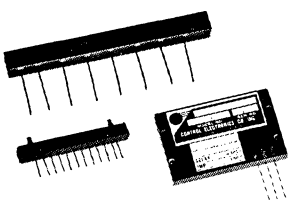
SUBMINIATURE DELAY LINES



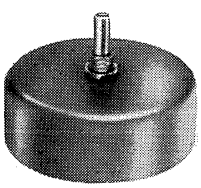


TO-5 and micrologic packaged delay lines from 0.01 to 0.64 and longer delays. Ideal for timing transistors and other circuit components.

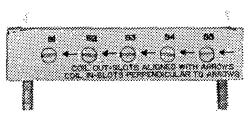
LUMPED CONSTANT DELAY LINES — Many shapes available including miniature types with pin connectors for PC Boards, connector fingers for plug-in units...multi-tapped units...terminal-ended units, etc. Delays from 0.05 usec to 500 usec for standard units. Delay to risetime ratios up to 100:1. Temperature stability to 50 ppm/C°.



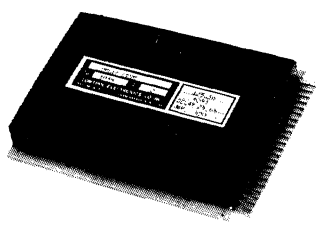
COMPACT FIXED DELAY LINES FOR PC BOARDS — Extremely high density packaging. Typical Unit: 25:1 delay-to-rise-time ratio in a volume of 2 cubic inches.



VARIABLE DELAY LINE Resolution of 1 part in 120. Delay up to 10 usec. 1″ x 3″.

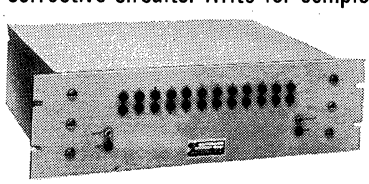


UNIQUE BINARY CODED SECTIONAL DELAY LINE — Uses miniature transfer switches. Also available with terminals for remote switching.



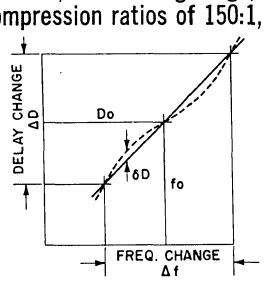
IFF MULTI-TAP DELAY LINES Standard IFF delay lines with taps every 1.45 usec. High density packaging available for airborne transponder use.

AUDIO, HIGH FREQUENCY & DISTRIBUTED CONSTANT DELAY LINES — With unusual circuits, extreme delays, high frequency application, rapid rise times, conforming waveform circuits and corrective circuits. Write for complete details.



AUDIO DELAY CABINET — Relay rack mounted cabinet houses 25 millisecond delay with taps at every ms. Units can be cascaded for longer delays.

DISPERSIVE STRIP DELAY LINES — Delay varies with frequency. A prime application is in Pulse Compression Radar Systems, eliminating large, expensive filter components. Compression ratios of 150:1, typical.



$\Delta D \cdot \Delta f$ = COMPRESSION RATIO OR DISPERSION FACTOR

$\frac{\Delta f}{fo}$ = BANDWIDTH %

fo = MIDBAND FREQUENCY

Do = MIDBAND DELAY

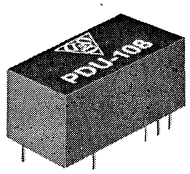
DIGITALLY PROGRAMMABLE DELAY LINES

SERIES PDU-108 (ECL Interfaced) 3 BIT



Specifications

- Operating temperature: −0°C to 70°C.
- Storage temperature; −55° to +125°C.
- Power dissipation: −290 MW typ. (no load).
- 16 pin DIP.
- Delay variation: Monotonic in one direction.
- Inherent delay: 5NS typ.
- Tolerance: 5% or ½ NS, whichever is greater.

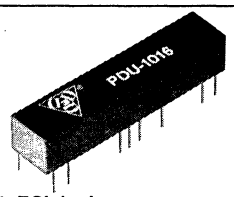
DIGITALLY PROGRAMMABLE DELAY LINES

SERIES PDU-1016 (ECL Interfaced) 4-BIT



Specifications

- Input signal requirement: ECL logic.
- Output fan-out: ECL loads.
- Delay variation: Monotonic in one direction.
- Delay tolerance: ±5% or INS whichever is greater.
- Inherent delay: 11 NS ±1 NS for PDU-1016 −1 thru −5. Greater for rest of Part Numbers.
- Temperature range: 0-70°C.
- Temperature coefficient: 100 PPM/°C.
- Supply voltage: −5 Vdc.
- Power dissipation: 615 MW typ.

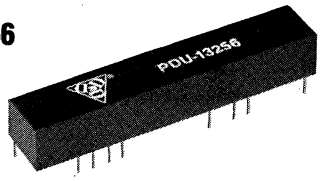
PDU-10256-5	5	1,275	PDU-10256-10	10	2,550

NOTE: For the sake of simplicity all 256 programmable steps are not shown in this truth table.

SERIES PDU-13256 (TTL Interfaced) 8-BIT



Specifications

Same as PDU-1316 except:

- **Inherent delay: 44 NS on pin 6, 45 NS on pin 5** } typ
- **Power dissipation: 1.1 W Max.**

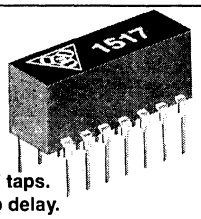
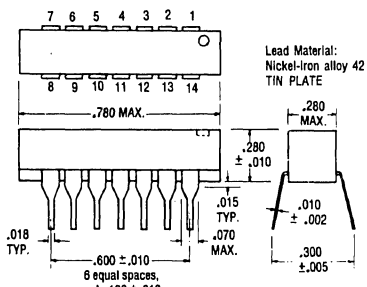
DIP-TAPPED DELAY LINES

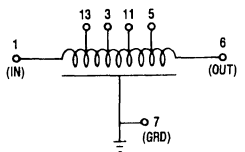
SERIES 1517
5 Taps



Specifications

- Delay accuracy: ±5% (others on request).
- No. taps: 5 Equally spaced taps.
- Taps accuracy: ±5% of tap delay.
- Impedance tolerance: ±10% (others on request).
- Rise-Time: 30% of time delay.
- Withstanding voltage: 50 Vdc. Min.
- Temperature coefficient: 100 PPM/°C.
- Environment: Meets or exceeds MIL-D-23859C.





TAPS - CONNECTION

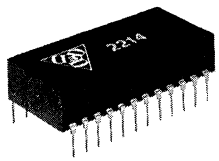
DIP-TAPPED DELAY LINES

SERIES 2214
20 Taps



Specifications

- 20 Equally spaced taps.
- Td/Tr = 10/1.
- Delay tolerance: ±5% or INS whichever is greater.
- Tap tolerance: ±5% or INS whichever is greater.
- Temperature coefficient: 100 PPM/°C.
- Temperature range: −55°C to +125°C.
- Dielectric breakdown: 50 Vdc.
- Meets or exceeds MIL-D-23859C.
- Epoxy encapsulated.

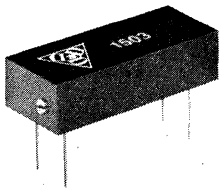
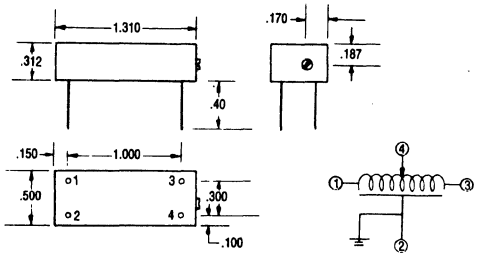
CONTINUOUSLY VARIABLE DELAY LINES

SERIES 1503

Specifications



- Continuously variable delay.
- Multi-turn adjusting screw (40 turns approx.).
- Temperature coefficient — 100 PPM/°C.
- Rise-time −20% of time delay
- Flat leads (.020 x .010).
- Withstanding voltage — 50 Vdc.
- Resolution — .12NS approx.



Part No.	Td (NS)	Imp. (Ω)	Rdc (Ω)	Part No.	Td (NS)	Imp. (Ω)	Rdc (Ω)

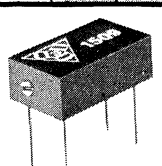
SERIES 1509

Specifications



- Low cost unit.
- Fits standard DIP sockets.
- Continuously variable.
- 20 Turns approx.
- Resolution — .15 NS.
- Withstanding voltage — 100 Vdc.
- Temperature coefficient — 200 PPM/°C.
- Flat leads (.020 x .010).

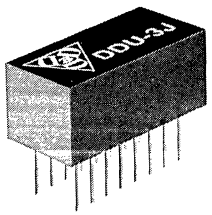
DIGITAL DELAY LINES

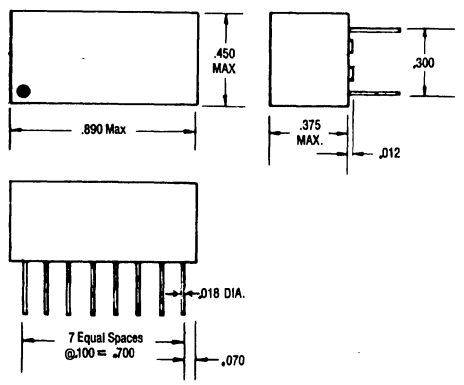
SERIES: DDU-3J (TTL Interfaced) 1 to 5 Taps, 16 pins DIP

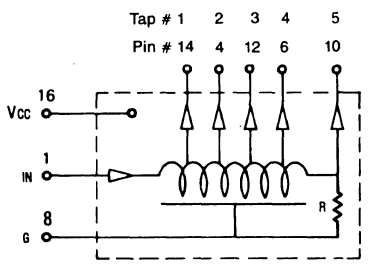


Specifications

- Delay tolerance: ±5% or better; or 2 NS whichever is greater.
- Rise-time: 4 NS typically.
- Temperature coefficient: 100 PPM/°C.
- Temperature range: −0°C to 70°C standard (−55°C to + 125°C on request).*

*Add "M" to PART NO. Example DDU-3J-5100M





SCHEMATIC DIAGRAM FOR 5 DELAYS OUTPUT

Engineered Components Company is pleased to introduce several new product lines and expanded capability in active digital modules. The succeeding 15 pages contain abbreviated data sheets covering 29 product lines of both passive-analog and active-digital delay lines

In addition to the delay lines shown, pages 1•1434 through 1•1441 in this section provide data on the following additional active digital products utilizing LC delay line technology:

Noise Filter Modules
Pulse Generator Modules
Square Wave Generator Modules
Digital Clock Modules
Digital Frequency Multiplier Modules

These modules are designed specifically for mounting on printed circuit boards in system applications where critical timing functions are required. These products find wide industrial applications in microcomputer, computer interface, radar timing, communication, instrumentation, dynamic and static memory timing and high speed RAM, PROM and IC test equipment.

The following active delay line modules are covered in this listing:

Five (5) output Logic Delay Modules
Ten (10) output Logic Delay Modules
Fixed Logic Delay Lines
Multiple Logic Delay Lines
Programmable Logic Delay Lines

These products are offered in modules compatible with T^2L Schottky, T^2L low power Schottky, ECL 10,000 and ECL 100K logic families.

CONSTRUCTION: The active digital modules shown in the following pages are of hybrid construction utilizing the proven technologies of active integrated circuitry and of passive networks utilizing capacitive, inductive and resistive elements. All integrated circuits used in these modules are pre-packaged by the manufacturer and burned-in to Level B of MIL-STD-883 to ensure a high MTBF. The passive elements utilized in the construction have been selected to provide adequate derating to preclude premature failures, thus contributing additionally to a high MTBF. On the detailed product pages, you will find MTBFs that are obtained by calculations per MIL-HDBK-217B for a 50°C ground fixed environment. In the case of the T^2L modules, the operating temperature is 0° to +70°C, for ECL 10,000 it is −30° to +85°C and for ECL 100K it is 0° to +85°C.

PACKAGING: The modules shown in the following pages are packaged in dual-in-line configuration. All modules are epoxy encapsulated in housings molded of flame-proof Diallyl Phthalate. Leads meet the solderability requirements of MIL-STD-202, Method 208. Standoffs are provided, either on the leads or on the housing, to provide positive standoff of the modules from the printed circuit boards to permit solder-fillet formation and flush cleaning of solder-flux residues for improved reliability.

MARKING: Marking of all modules consists of manufacturer's name, logo (EC^2), part number, terminal identification and date code of manufacture. All marking is applied by silk screen process using white epoxy paint in accordance with MIL-STD-130, to meet the permanency of identification required by MIL-STD-202, Method 215.

EXTENDED TEMPERATURE RANGE: Many of the products shown in the following pages are also available as standard products in an extended temperature range of −55° to +125°C. These standard product lines are the TTLDL, TTLDM and the MTTLDL. Most products, however, can be supplied in the extended temperature range, based upon specific customer requirements, even though no standard product line exists.

SPECIALS: In addition to the items offered as standard products, we continually develop "made to order" parts where differences in tolerances, delays, silhouette, etc., are required. Engineered Components Company has the technical staff and capability, the modern equipment and extensive component inventory to support development and production of special variations of our standard product lines. Because of our experience and expertise in the unique products which we presently produce, in many instances we are able to develop entirely new special modules. Lead time for special versions is often only a matter of a few weeks and, in some cases, even days. We invite your inquiries.

Engineered Components Company is dedicated to customer service which includes on-time delivery, development of special products required to satisfy a particular need, customer satisfaction and a response to advanced state-of-the-art developments in active module products required by industry applications. We shall always strive to be progressive, innovative and responsible. Because of the extensive standard products available from our company, it is impossible to have all items in inventory at all times. We will make the commitment, however, to satisfy the customer's requirement for delivery and continually strive to "put out the fires" and to provide the product in sufficient numbers to prevent customer production problems whenever possible.

DIP LUMPED CONSTANT Low Profile
PASSIVE DELAY LINE

- Analog input and outputs
- Delays stable and precise
- 14-pin DIP package
- Available in delays from 10 to 150ns
- Available in impedances of 50,100 and 200 ohms
- Dimensions: .290 wide X .725 long X .225 high
- MTBF in excess of 2 million hours

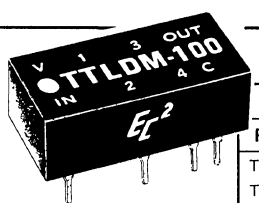
T²L COMPATIBLE Low Profile
LOGIC DELAY MODULE (Schottky)



- T²L input and outputs
- Delays stable and precise
- 14-pin DIP package
- Available in delays from 25 to 1000ns
- 20% taps — each isolated and with 10 T²L fan-out capacity
- Rise time 4ns maximum
- Dimensions: .400 wide X .800 long X .250 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 3 million hours
- Operating temperature range of 0° to +70°C

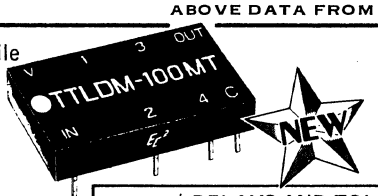
T²L COMPATIBLE "Thinny DIP" Super Low Profile
LOGIC DELAY MODULE (Schottky)



- Full military temperature range
- T²L input and outputs
- Delays stable and precise
- 14-pin DIP package
- Available in delays from 25 to 500ns
- 20% taps – each isolated and with 10 T²L fan-out capacity
- Fast rise time on all outputs
- Dimensions: .500 wide X .800 long X .165 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 3 million hours
- Operating temperature range of −55° to +125°C

ECL 10K COMPATIBLE Low Profile

LOGIC DELAY MODULE

- ECL input and outputs
- Delays stable and precise
- 16-pin DIP package
- Available in delays from 25ns to 1000ns
- 20% taps – each isolated and with 70 ECL DC fan-out capacity
- Fast rise times on all outputs
- Dimensions: .400 wide X .800 long X .250 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 3 million hours
- Operating temperature range of –30° to +85°C

ECL 10K COMPATIBLE Low Profile

DOUBLE LOGIC DELAY MODULE

- ECL input and outputs
- Delays stable and precise
- 32-pin DIP package
- Available in delays from 11ns to 1000ns
- 10% taps – each isolated and with 70 ECL DC fan-out capacity
- Fast rise time on all outputs
- Dimensions: .400 wide X 1.600 long X .250 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 1.5 million hours
- Operating temperature range of −30° to +85°C

ECL 10K COMPATIBLE Low Profile

LOGIC DELAY LINE

- ECL input and output
- Delays stable and precise
- 16-pin DIP package
- Available in delays from 2ns to 1000ns
- Output isolated and with 70 ECL DC fan-out capacity
- Fast rise times on all outputs
- Dimensions: .400 wide X .800 long X .250 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 3 million hours
- Operating temperature range of – 30°C to +85°C

ECL 10K COMPATIBLE Low Profile

PROGRAMMABLE LOGIC DELAY LINE (6-Bit)

- ECL input and output levels
- Delays stable and precise
- 48-pin DIP package
- Available in delays up to 323ns
- Available in 5 delay steps with resolution from 1ns to 5ns
- Propagation delays fully compensated
- All delays digitally programmable
- 70 ECL DC fan-out capacity
- Dimensions: .400 wide X 2.400 long X .250 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 500,000 hours
- Operating temperature range of – 30° to +85°C

ECL 100K COMPATIBLE

LOGIC DELAY MODULE

- ECL 100K input and outputs
- Delays stable and precise
- 24-pin DIP package
- Available in delays from 16ns to 80ns
- 12.5% taps – each isolated and with 70 ECL DC fan-out capacity
- Dimensions: .500 wide X 1.300 long X .375 high
- Rise time 1ns nominal on all outputs
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 1 million hours
- Operating temperature range of 0° to +85°C

T²L COMPATIBLE Low Profile

LOGIC NOISE FILTER MODULE (Schottky)

- T²L input and output
- Pulse width detection stable and precise
- 14-pin DIP package
- Available in pulse widths from 5ns to 500ns
- 8 T²L fan-out capacity
- Dimensions: .400 wide X .800 long X .250 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 3.5 million hours
- Operating temperature range of 0° to +70°C

BLOCK DIAGRAM IS SHOWN BELOW

T²L COMPATIBLE "Mini DIP" Low Profile
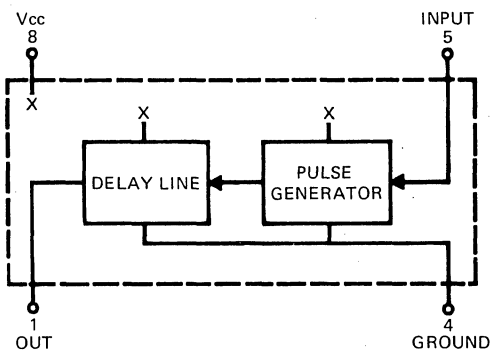
DELAYED PULSE GENERATOR MODULE (Schottky)

- T²L input and output
- Pulse widths stable and precise
- 8-pin DIP package
- Available in pulse widths from 5 to 100ns
- 10 Schottky T²L fan-out capacity
- Dimensions: .400 wide X .500 long X .250 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 4 million hours
- Operating temperature range of 0° to +70°C

BLOCK DIAGRAM IS SHOWN BELOW



Part Number	Pulse Width (in ns)

T²L COMPATIBLE "Thinny DIP" Super Low Profile
PULSE GENERATOR MODULE (Schottky)

- Full military temperature range
- T²L input and output
- Pulse widths stable and precise
- 14-pin DIP package
- Available in pulse widths from 5 to 100ns
- Dimensions: .500 wide X .800 long X .165 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 4 million hours
- Operating temperature range of −55° to +125°C

ECL 10K COMPATIBLE Low Profile

PULSE GENERATOR MODULE

- ECL input and outputs
- Pulse widths stable and precise
- 16-pin DIP package
- Available in pulse widths from 5ns to 100ns
- Dimensions: .400 wide X .800 long X .250 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 1.5 million hours
- Operating temperature range of −30° to +85°C

ECL 100K COMPATIBLE

DUAL PULSE GENERATOR MODULE

- ECL 100K input and output levels
- Dual units with separate trigger inputs and outputs
- Pulse widths stable and precise
- 12-pin DIP package
- Available in pulse widths from 2ns to 50ns
- 70 ECL DC fan-out capacity
- Dimensions: .700 wide X .875 long X .325 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 1 million hours
- Operating temperature range of 0° to +85°C

T²L COMPATIBLE Low Profile
SQUARE WAVE GENERATOR MODULE (Schottky)

- T²L input and output
- Output wavetrain can be started in sync with random events
- 14-pin DIP package
- Available in frequencies from 2 Mhz to 100 Mhz
- Output frequencies controlled to within ±2%
- 10 T²L fan-out capacity
- Dimensions: .400 wide X .800 long X .250 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 3 million hours
- Operating temperature range of 0° to +70°C

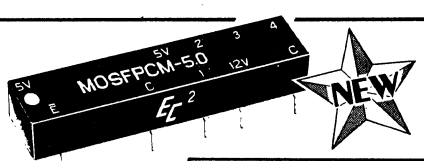
MOS COMPATIBLE Low Profile

FOUR-PHASE CLOCK MODULE



- T²L input and 12V MOS output
- 20% time slots result in non-overlapping phases
- 30-pin DIP package
- Available in frequencies from 500 Khz to 15 Mhz
- Dimensions: .400 wide X .1.600 long X .300 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 750,000 hours
- Operating temperature range of 0° to +70°C

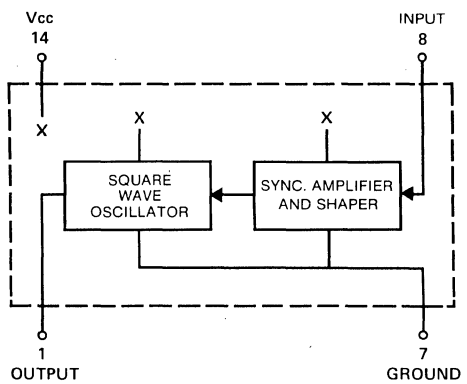
T²L COMPATIBLE Low Profile

DIGITAL FREQUENCY MULTIPLIER MODULE (Schottky)

- T²L input and output
- Output wavetrain synchronized with input square wave
- 14-pin DIP package
- Available in frequencies from 2 Mhz to 100 Mhz
- 10 T²L fan-out capacity
- Dimensions: .400 wide X .800 long X .250 high
- ICs burned in to Level B of MIL-STD-883
- MTBF in excess of 2 million hours
- Operating temperature range of 0° to +70°C

BLOCK DIAGRAM IS SHOWN BELOW



Part Number	Output Frequency	Part Number	Output Frequency
TTLDFMM-2	2 Mhz	TTLDFMM-15	15 Mhz
TTLDFMM-3	3 Mhz	TTLDFMM-20	20 Mhz
TTLDFMM-4	4 Mhz	TTLDFMM-25	25 Mhz

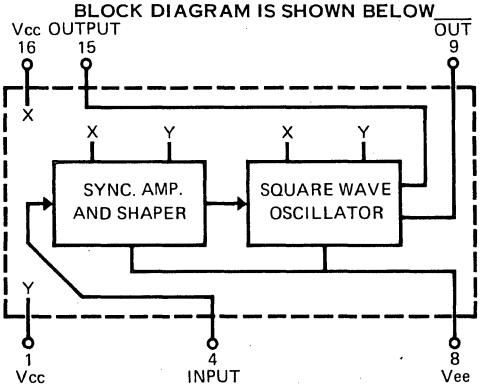
ECL 10K COMPATIBLE Low Profile

DIGITAL FREQUENCY MULTIPLIER MODULE

- ECL input and output
- Output wavetrain synchronized with input square wave
- 16-pin DIP package
- Available in frequencies from 2 Mhz to 100 Mhz
- 70 ECL DC fan-out capacity
- Dimensions: .400 wide X .800 long X .250 high
- ICs burned-in to Level B of MIL-STD-883
- MTBF in excess of 1 million hours
- Operating temperature range of −30° to +85°C

BLOCK DIAGRAM IS SHOWN BELOW



Part Number	Output Frequency	Part Number	Output Frequency
ECLDFMM-2	2 Mhz	ECLDFMM-15	15 Mhz
ECLDFMM-3	3 Mhz	ECLDFMM-20	20 Mhz

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

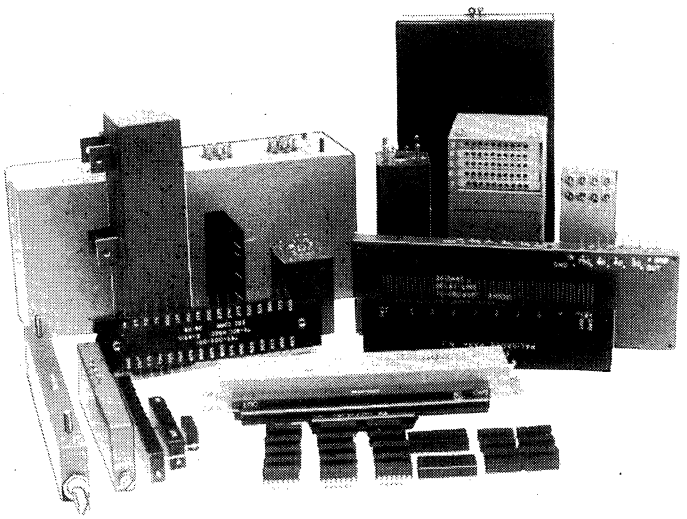
DELAY LINES

OVER 30 YEARS OF SUPERIOR QUALITY AND RELIABILITY!

30 years of experience and expertise in delay line design and manufacture. The following pages list a large sampling of the industry's current demand for short delay lines both analog and digital types, but ESC is still the most chosen source for delay lines ranging up to several hundred milliseconds and with delay-to-rise time ratios up to 250:1. In addition to lumped constant types, also manufactured are distributed constant, voltage variables and mechanically variable devices.



ESC ALSO DESIGNS AND MANUFACTURES TYPICALLY:

Equalized, Precision tapped, low distortion, beam forming delay lines for sonars, scanners, transponders, sorters, Tacan and DME, etc.

Programmable and mechanically variable Delay lines for the TV Broadcast industry, including video cable simulators and voltage variable Delay Lines.

Proven design, manufacturing capabilities, and facilities encompassing all quality levels dictated by MIL-I-45208 and MIL-Q-9858A.

HIGH RELIABILITY:

The proven design and manufacturing techniques are employed by ESC for all levels of reliability required for the military, satellite or space probes and encompass quality levels dictated by MIL-I-45208 & MIL-Q-9858A as applicable.

ESC has participated in many hi-rel programs over the years starting with Appolo, Minuteman and the Viking Probe and currently in such programs as Trident, F15,F16,B-1, Space Shuttle and Peacekeeper.

ESC maintains an extensive continuous program of life testing on the new generation of military TTL compatible hybrid delay lines. This program has accumulated in excess of 12.8 million unit hours of test,yielding a failure rate of .0234%/per 1000 hrs.

ESC has expanded its testing capabilities for the new generation of TTL,DTL & ECL Compatible hybrid delay lines. Testing is accomplished by computer controlled, state-of-the-art equipment, which is capable of recording leading and trailing edge delay time, rise and fall time, all within seconds. In addition and at comparable speeds, the hybrid delay line DC parameters such as Icc,Vi,Vol,Voh,Ii,Iil and Iin are swiftly measured and recorded if necessary.

The highly accurate and high speed testing system allows all parameters to be tested on a 100% basis guaranteeing the highest quality product to our customers.

At the side is a sample computer read-out exhibiting the leading and trailing delay and rise and fall times at three operating levels for a TTL hybrid delay line.

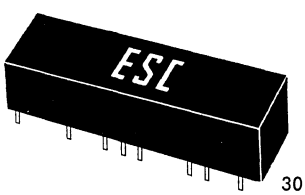
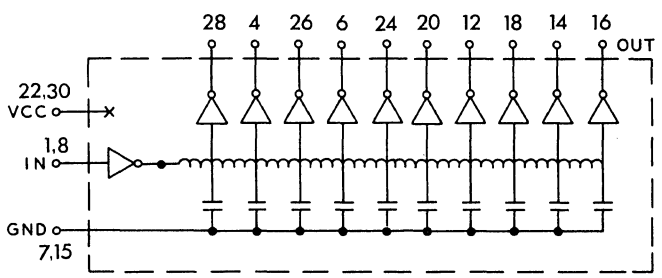
30T500	500	50
30T1000	1000	100



30 PIN



Size: 30 Pin 1.70L X .40W X .30H

Looking for LC Filters? See our page in Section 2700

SPECIFICATIONS:

- Supply voltage: 5V ± 5%
- Logic 1 input current: 50 µA max.
- Logic 0 input current: 2 MA max.
- Logic 1 voltage out: 2.4V min.
- Logic 0 voltage out: 0.5V max.
- Operating temperature: 0 to + 70°C
- Fan-out capabilities (max): 10 TTL loads/tap, 20 TTL loads/unit
- Delay tolerances: ± 2 ns or ± 5% whichever is greater
- Rise Time: 4 ns max
- Series 8T and 30T available for -55°C to + 125°C operation. Add letter "C" after "T" when specifying. Series 30T height will increase to .36.

ECL "10,000" DIGITAL DELAY LINES

These ECL Hybrid Delay Lines are contained in a 16 Pin DIP Package using ECL "10,000" Series Circuits

SPECIFICATIONS:

- Logic 1 (output): -.96 V min.
- Logic 0 (output): -1.65 V max.
- Delay tolerances: ± 1 ns below 20 ns delay; ± 1 ns or ± 5% whichever is greater above 20 ns delay.
- Operating temp: -0°C to + 70°C
- Storage temp. range: -55°C to + 125°C
- Size: .8L X .4W X .36H

DELAY LINES

TTL DIGITAL PROGRAMMABLE DELAY LINES

This series of programmable hybrid delay lines utilize TTL Schottky circuits.

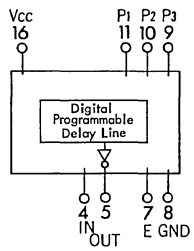
The PTT's are offered in 3, 4 & 6 Bit Series.

SERIES PTT3

TTL COMPATIBLE 3 BIT PROGRAMMABLE DELAY LINE

Model No.	Zero Step Delay (ns)	Maximum Delay (ns) (nom)	Delay per step (ns)
PTT3-1	7 ± 2	14	1 ± .5
PTT3-2		21	2 ± .5
PTT3-3		28	3 ± .6
PTT3-4		35	4 ± .8
PTT3-5		42	5 ± 1
PTT3-6		49	6 ± 1
PTT3-7		56	7 ± 1
PTT3-8		63	8 ± 1
PTT3-9		70	9 ± 1
PTT3-10		77	10 ± 1

16 Pin DIL



Size: .80L X .40W X .28 H

SERIES PTT4

TTL COMPATIBLE 4 BIT PROGRAMMABLE DELAY LINE

Model No.	Zero Step Delay (ns)	Maximum Delay (ns) (nom)	Delay per step (ns)
PTT4-1	15 ± 2	30	1 ± .5
PTT4-2		45	2 ± .5
PTT4-3		60	3 ± .6
PTT4-4		75	4 ± .8

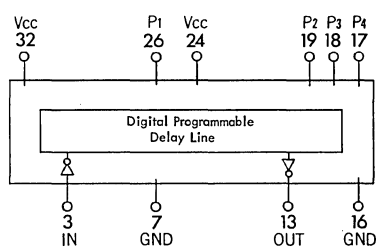
PTT4-10		165	10 ± 1

32 Pin DIL



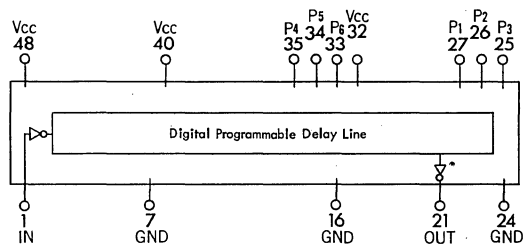
Size: 1.75L X .40W X .28 H

SERIES PTT6

TTL COMPATIBLE 6 BIT PROGRAMMABLE DELAY LINE

Model No.	Zero Step Delay (ns)	Maximum Delay (ns) (nom)	Delay per step (ns)
PTT6-1	20 ± 2	83	1 ± .5
PTT6-2		146	2 ± .5
PTT6-3		209	3 ± .6
PTT6-4		272	4 ± .8
PTT6-5		335	5 ± 1

48 Pin DIL



Size: 2.55L X .40W X .28 H

SPECIFICATIONS:

- Logic 1 (output): 2.4 min
- Logic 0 (output): .50 VDC max
- Operating Temp. Range: 0°C to + 70°C *
- Storage Temp. Range: -55°C to + 125°C

*For -55°C to + 125°C operation - Contact Plant

TEST CONDITIONS:

- Vcc = 5 VDC ± 5% Temp. 25°C
- Td measured at the 1.5V level outputs loaded with 15pf.

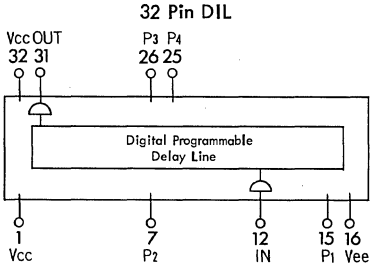
PEC4-3		55	3 ± .6
PEC4-4		70	4 ± .8
PEC4-5		85	5 ± 1

32 Pin DIL

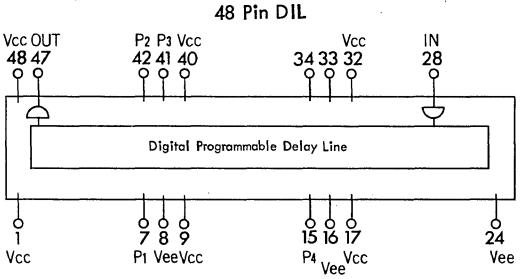


Size: 1.75L X .40W X .36H

SERIES PEC6
6 BIT PROGRAMMABLE DELAY LINES

Model No.	Zero Step Delay (ns)	Maximum Delay (ns) (nom)	Delay per step (ns)
PEC6-1	8 ± 2	71	1 ± .5
PEC6-2		134	2 ± .5
PEC6-3		197	3 ± .6
PEC6-4		260	4 ± .8
PEC6-5		323	5 ± 1

48 Pin DIL



Size: 2.50L X .40W X .36H

SPECIFICATIONS:

- Logic 1 (output): -.96V min
- Logic 0 (output): -1.65V max
- Operating Temp.Range: -0°C to + 70°C
- Storage Temp.Range: -55°C to + 125°C

TEST CONDITIONS:

- Input Pulse Width: 1.2 X max delay time
- Input Pulse Spacing: 5 X max delay time
- Input Rise Time: 2 ns max
- Input Pulse Voltage: 1.0V (-.75V to -1.75V)
- Vee: -5.2VDC
- Output connected to -2VDC through 100 ohms.
- Time delays measured at -1.3 Volt Level.

OVER 30 YEARS OF SUPERIOR QUALITY AND RELIABILITY!

MULTI-TAPPED DIGITAL DELAY LINES (25- to 250-ns models)

HY-5001 HY-5010

Ideal for Dynamic RAM Timing in Commercial and Military Memory Circuits

- ±5% total delay accuracy
- Schottky buffered inputs and outputs
- Pin-for-pin compatibility with other lead manufacturers
- Off-the-shelf delivery of standard ranges
- Fast rise time (4ns max.)
- 14 pin, low profile, hermetic, metal dip package
- Inherent hybrid accuracy and reliability

10 TAP

Part No.	Total Delay Time*	Delay Increment at Each Tap
HY-5010-050	50ns	5ns†
HY-5010-100	100ns	10ns
HY-5010-150	150ns	15ns
HY-5010-200	200ns	20ns
HY-5010-250	250ns	25ns

†Delay from input to first tap is 7 ns min.
*Measured at 1.5V point on leading edge.

DESCRIPTION

Hytek's Model HY5001 Multi-Tapped Delay Lines are Schottky TTL buffered to provide precise timing delays without additional components. Users can select models with total delays of 25 to 250ns with taps in 10% or 20% increments.

Maximum delay line reliability is assured by the use of a hybrid circuit enclosed in a hermetic metal package. The thick film design provides for most efficient internal integration and guarantees manufacturing repeatability.

These units can be used directly with TTL, high-speed TTL, and DTL circuits. The outputs have a fast rise time independent of the delay and have standard TTL fanout capabilities.

The delay lines are packaged in a low-profile, 14 lead DIP configuration. The units are manufactured and tested to meet the best commercial standards.

Custom multiple- and single-tapped delay lines are offered in ranges of 5 to 1000ns with tap values as required.

Active & Passive Delay Lines

JBM produces one of the industry's broadest lines of active (digital) and passive magnetic delay lines for use in computers, communications equipment, military instrumentation, etc. In addition to hundreds of standard models, we offer extensive capabilities for the design and production of custom units for special applications.

ACTIVE DELAY LINES

INTERNALLY TERMINATED

SERIES DL16 SPECIFICATIONS

Total Delay Times(ns): 25, 50, 100, 150, 200, 250, 300, 350, 400, 450, 500, 600, 700, 800, 900, 1000 (other values available upon request).

Total Delay Tolerance: ±5% or ±2ns, whichever is greater (tighter tolerances available upon request).

Tap Delay: 20% of nominal Total Delay Time.

Tap Tolerance: ±5% or ±2ns, whichever is greater; referenced from input.

INPUT TEST CONDITIONS:

Pulse Voltage: 3.2V
Risetime: ≤2.0 ns
Supply Current: 60 mA typ.
Pulse Width: 40% minimum of total delay

ELECTRICAL CHARACTERISTICS:

Computer-Grade (Military-Grade)
Supply Voltage: 5.0V ±0.25V (±0.50V)

Logic 1:

Input Voltage: 2.0V min.
Input Current: 50μA max.
Output Voltage: 2.7V min. (2.5V min.)
Output Current: 2.5mA typ., 4.0mA max.

Logic 0:

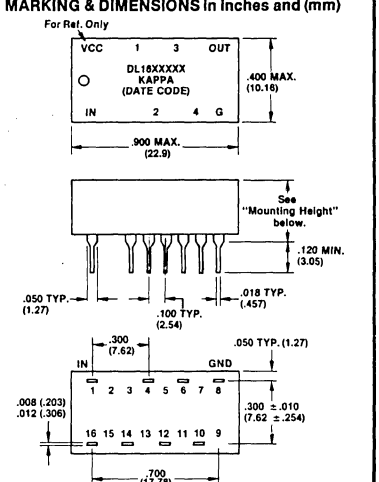
Input Voltage: 0.8V max.
Input Current: −2.0 mA max.
Output Voltage: 0.5V max.
Output Current: 5 mA typ., 9 mA max.

DRIVE CAPABILITIES

Logic 0 Output: 10 TTL Loads/Tap max.
20 TTL Loads/Unit max.

Logic 1 Output: 20 TTL Loads/Unit max.

MARKING & DIMENSIONS in Inches and (mm)



PART NUMBER EXAMPLE

DL13(16) M C 250 *

BASIC SERIES #

"C" = Computer-grade
"M" = Military-grade

MOUNTING HEIGHT
"B" = 0.275" (6.98mm) max.*
"C" = 0.325" (8.26mm) max.
*Computer-grade only.

DELAY TIME: Expressed in nanoseconds (ns). First two digits are significant figures. Last digit specified number of zeroes to follow.

OPTIONS: "X" = IC ONLY screened to MIL-STD-883 method 1015 and MIL-M-38510, part no. JM38510/07003
"Z" = Final Product screened to MIL-STD-883, Method 1011 also includes "X" OPTION SCREENING.

(1) Delays measured at 1.5V level on leading edge only with no loads on taps.

(2) Risetime measured from 0.75V to 2.4V level.

FEATURES

- 14-Pin DIP Package
- Risetime 4ns Maximum
- Three Independent Equal Delays
- Operating Temperature Range: 0°C to +70°C
- TTL and DTL Compatible

INPUT TEST CONDITIONS

V_C: 5.0 ±0.25V
Supply Current: I_{CCH} = 90mA max.
I_{CCL} = 115mA max.
Pulse Voltage: 3.2V
Risetime: 2.0 ns
Pulse Width: 100% min. of Delay
Duty Cycle: 33% or less

ELECTRICAL SPECIFICATIONS

Logic 1: 50μA max., 2.0V min.
Logic 0: −2.0mA max., 0.8V max.
Logic 1 Voltage Output: 2.4V min.
Logic 0 Voltage Output: 0.4V max.

DRIVE CAPABILITIES

10 TTL loads per line

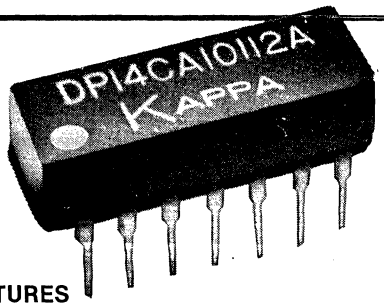
SERIES DP14C COMPUTER GRADE
14-PIN DIP DELAY LINE
(available in full-MIL conformance as Series DP14M)



FEATURES
- TTL and DTL compatible
- Meets applicable requirements of MIL-D-23859
- 5/1 Delay-to-Risetime Ratio
- 10 Equally Spaced Taps
- Wide Operating Temperature Range
- Low cost

ELECTRICAL SPECIFICATIONS
Total Delay: 10 to 1000 ns
Tap Delays: 10% increments standard (other increments available upon request)
Risetime: 20% maximum of total delay (see Table 1)
Characteristic Impedance: 50 to 500 ohms (±10%)
Attenuation: 2dB maximum (see Table 1)
Distortion: ±10% maximum
Temperature Coefficient of Delay: 100ppm/°C max.
Operating Temperature Range: −55°C to +125°C
Storage Temperature Range: −65°C to +130°C
Insulation Resistance: 1000 megohms min. @ 50VDC @ 25°C
Dielectric Strength: 50VDC

MECHANICAL SPECIFICATIONS
Case Configuration: See FIGURE 2
Case Material: Molded Epoxy
Terminals: Flat, DIP-type (See FIGURE 2)
Terminal Material: Kovar or equivalent, tin-plated
Pin Connections: See TABLE II
Potting: 100% filled with a two-component epoxy
Marking: Includes manufacturer's name, part number, and date code (See FIGURE 2)

PART NUMBER EXAMPLE
Typical part number is a combination of the Basic Series Number, Mounting Height Code, Delay Time, Impedance, and Pin Sequence Code.

EXAMPLE: DP14CA10112A

(100ns, 100 ohm, 0.200" (5.08mm) Max. Height, using the code "A" Pin Sequence).

DP14C A 101 12 A

BASIC SERIES NUMBER

MOUNTING HEIGHT CODE (See TABLE III)

DELAY TIME: Expressed in nanoseconds (ns). First two digits are significant figures. Last digit specifies number of zeros to follow.

IMPEDANCE: Expressed in ohms (Ω). First digit is significant. Last digit specifies number of zeros to follow.

PIN SEQUENCE CODE (See TABLE II). "STANDARD" Pin Sequence if omitted.

TABLE I

Td (ns)(1) (±5%)	Td/tap (ns)(2) (3) (±10%)	Tr (ns) MAX.	ATTENUATION (%) TYPICAL per IMPEDANCE (Ω)

TABLE III. MOUNTING HEIGHT

CODE	DIMENSION (MAX.)
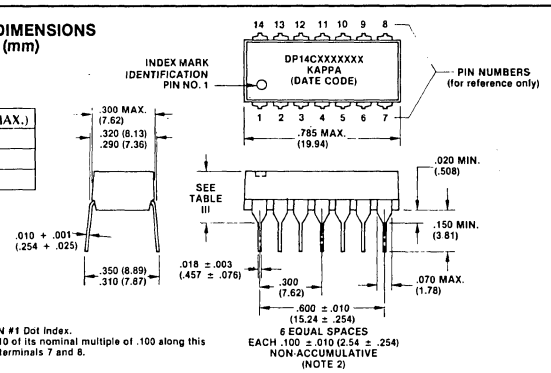
B	.250 (6.35)
C	.300 (7.62)



Notes:
(1) A notch may be substituted for PIN #1 Dot Index.
(2) Each terminal is located with ±.010 of its nominal multiple of .100 along this longitudinal dimension relative to terminals 12 and 13.

HOW TO ORDER

1. Select MOUNTING HEIGHT CODE from Table III.
2. Select PART NUMBER CODE from Table I.
3. Select PIN-NUMBER SEQUENCE CODE from Table II.
4. Construct the MODEL NUMBER. (See example below.)

This example, Model DP24CB-40112B, identifies a 400ns, 100-ohm line with 0.300" mounting height and the "B" pin-number sequence.

DP24C C 40112 B

SERIES SP07 COMPUTER GRADE

7-PIN SIP DELAY LINE

NEW FOR 1983

FEATURES

- 7-Pin SIP Package
- Five (5) Equally-Spaced Delay Taps
- Operating Temperature Range: 0°C to +70°C
- Low Output Distortion — ±10% Max.
- 5 ns to 100 ns Delay Range (other values available upon request)

ELECTRICAL SPECIFICATIONS

Total Delay: 5 to 100 ns
Tap Delays: 20% increments
Risetime: See Table 1
Characteristic Impedance: 50 to 100 ohms (±10%)
Attenuation: 5% maximum
Distortion: ± 10% maximum
Temperature Coefficient of Delay: 100ppm/°C max.

MECHANICAL SPECIFICATIONS

Case Configuration: See Dimension Drawing
Case Material: Molded Epoxy
Terminals: Flat, DIP-type (See Dimension Drawing)
Terminal Material: Kovar or equivalent, tin-plated
Potting: 100% filled with a two-component epoxy
Marking: Includes manufacturer's name, part number, and date code (See Dimension Drawing)

TABLE I

SCHEMATIC

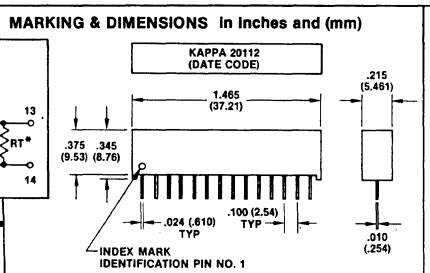
MARKING & DIMENSIONS In Inches and (mm)



PART NUMBER EXAMPLE

Typical part number is a combination of the Basic Series Number, Mounting Height Code, Delay Time, and Impedance

EXAMPLE: SP14CD10051T

SP14C D 100 51 T

BASIC SERIES NUMBER

MOUNTING HEIGHT CODE

DELAY TIME: Expressed in nanoseconds (ns)
First two digits are significant figures.
Last digit specifies number of zeros to follow

IMPEDANCE: Expressed in ohms (Ω).
First digit is significant.
Last digit specifies number of zeros to follow.

INTERNAL TERMINATION: (OPTIONAL)

CUSTOM MINIATURE & PRECISION DELAY LINES...

Optimization of Most Critical Parameters as Required.

Over the past two decades, **Kappa** has optimized, packaged, and critically tested literally thousands of specific variations of several hundred different passive and hybrid delay lines: fixed tapped, continuously adjustable, and electrically trimmable (varactor-tuned) lines; over virtually the complete signal spectrum from control (subaudio), through audio, sonar, RF, HF, and a wide variety of pulse rates widths and duty cycles.

Typical design families include:

- PRECISION SONAR DELAY LINES (Series A) 500 μsec to 10^6 μsec ±1%; linear to ±0.05%
- LOW-DISTORTION LINES (Series D) Delay-to-Rise-time Ratio: 50 max.; Bandwidth: 50 MHz max.
- MINIATURE CONTINUOUSLY VARIABLE DELAY TRIMMERS (Series TT) Size: ¼ Cubic Inch; up to 120 ns; resolution ≤0.25 ns.
- SUPER-η™ DELAY LINES (Series H) Embody New Design Principle Providing the Highest Efficiency Yet Obtainable in Lumped-Constant Delay lines.
- MINITRIM DELAY LINE (Series MT) Resolution Less Than .5 ns and Delay Ranges Up to 300 ns.
- VIDEO BROADCASTING DELAY LINES (Series BC) Widely Used in the Most Demanding Color TV Applications in American and European Systems
- TRANSPONDER/TACAN/DME (Series C) Designed to Meet the Requirements of MIL-D-23859 and to Withstand the Most Rigorous Military Environments.

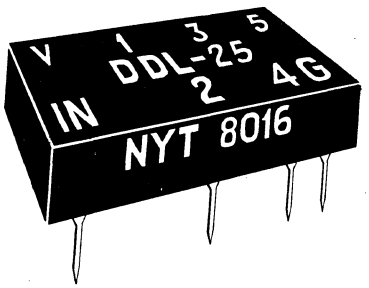
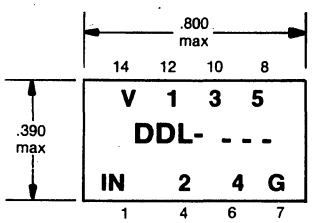
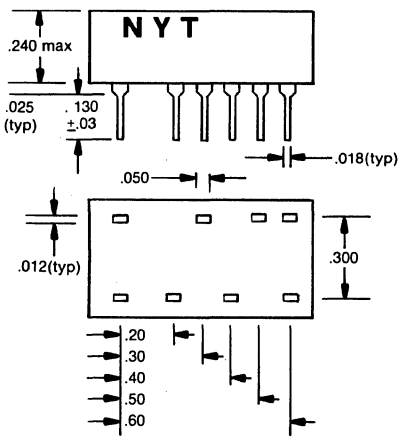
ACTIVE DIGITAL DELAY LINE



Nytronics Components Group, Inc. Digital Delay Lines provide a solution to terminating, driving and loading problems traditionally associated with delay line applications.





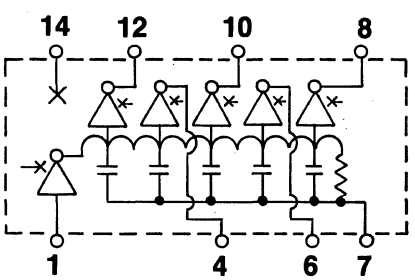
Eighteen (18) standard delay lines are offered ranging from 25ns to 500ns. Other combinations available include:

- Intermediate total delay values
- Non-symmetrical tapping points
- 2 or 3 delay lines per unit
- Closer tap and total delay tolerances
- Specified fall times and trailing edge delay times

Nytronics Components Group, Inc. Delay Line Engineering stands ready to help solve your delay line applications problems.

DIGITAL DELAY LINES FEATURE:

1) TTL Driven Inputs
2) TTL Bufrered Outputs
3) Internal Terminations
4) Low Profile Packages (.240″)
5) 14-Pin, DIP-IC Compatible
6) Output Rise Time 4.0ns max. (0.75v to 2.40v)



PART NUMBER	TOTAL DELAY (NS) (1) (2)	TAP DELAY (NS) (1) (2)	INPUT PULSE WIDTH (NS MINIMUM)

DDL-500	500	100	200

(1) Measured at 1.5V level leading edge; Vcc = 5.00VDC; No loads; at +25°C.
(2) Nominal delay, ±2NS or ±5%, whichever is greater; reference to input.

ELECTRICAL CHARACTERISTICS

(VIH) High-Level Input Voltage	2.0 to 5.0V
(IIH) High-Level Input Current	50ua Max.
(VIL) Low-Level Input Voltage	0.8V Max.
(IIL) Low-Level Input Current	−2ma Max.
(VOH) High-Level Output Voltage	2.4V Min.
(VOL) Low-Level Output Voltage	0.4V Max.
High-Level Output Drives	20 TTL Loads/Unit Max.
Low-Level Output Drives	10 TTL Loads/Tap Max. 20 TTL Loads/Unit Max.

RECOMMENDED OPERATING CONDITIONS

(Vcc) Supply Voltage	5.00 ±0.25VDC
(Icc) Supply Current	60ma (typ.)
(TRin) Input Rise Time	3ns.
(TWin) Input Pulse Width	40% of Delay
(Ein) Input Pulse Voltage	3.20VDC
Operating Temperature	0°C to 70°C
Storage Temperature	−55°C to +125°C

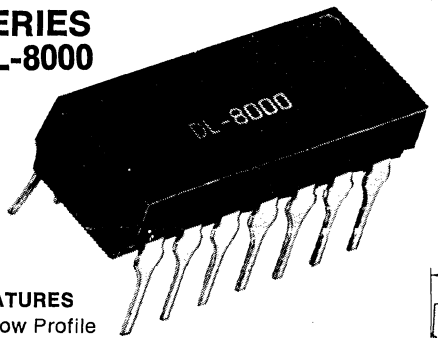
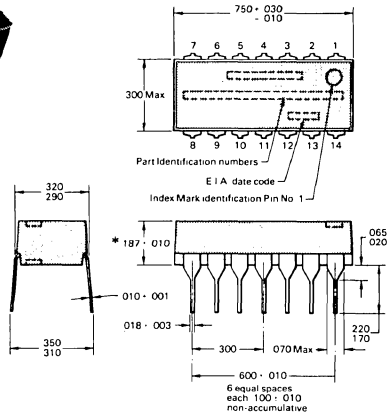
LUMPED CONSTANT DELAY LINE

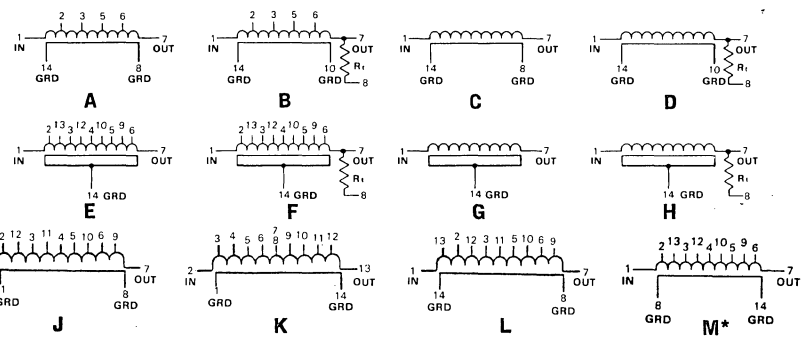
SERIES DL-8000





FEATURES

- Low Profile
- 14-Lead, DIP-IC Compatible Packages
- Standard Delay Times from 5 nsec to 500 nsec
- Standard Impedances of 50, 100, 200, 360 and 500 ohms
- Standard and Special Attenuations
- Easy to Order Special Models
- Drift Elimination by Lumped Constant Design
- Meets or Exceeds Applicable Requirements of MIL-STD-202 and MIL-STD-833
- Epoxy Transfer Molding for Cost/Delivery Time Savings
- Economy and Prompt Delivery on Standard Models
- High Reliability, Precision Performance, Broad Temperature Range Stability, Long Storage and Operational Life



R_t = Terminating Resistor (value of Z_o) ±5%, ⅛ watt, carbon.

Taps in equal increments of total delay.

* BUILT TO MEET MILITARY SPECIFICATION MIL-D-23859/23C

HOW TO ORDER

To allow the greatest possible range of parameters, the following ordering system should be followed on both standard and special orders.

Example: DL-8000-045-09-100-05 A
14-Pin Lumped Constant Dual In-Line Delay Line, 45 nsec T_d, 9 nsec T_r, 100 ohm impedance, 5% (Max.) attenuation, internal configuration "A."

DL-8000 045 09 100 05 A

PLACE 1
Base No. DL-8000 = 14-pin, Lumped Constant Dual In-Line Delay Lines (6 characters and dash)

PLACE 2
Delay Time (T_d)
Standard Models:
005 = 5 nsec, 050 = 50 nsec.
150 = 150 nsec, etc., from above table (3 digits)
Special Orders:
Enter full 3-digit nsec value (e.g., 075)

PLACE 3
Rise Time (T_r)
Standard Models:
Enter nsec digit
Value from table
(e.g., 2.0, 6.5, 40)
Special Orders:
Enter desired rise time in nsec (2 or more digits)

PLACE 4
Impedance (Z_o)
Standard Models:
050 = 50 ohms, 200 = 200 ohms
100 = 100 ohms, 360 = 360 ohms
(3 digits)
Special Orders:
Enter full 3-digit Ohm value (e.g., 075)

PLACE 5
Attenuation
Standard Models:
Enter 2-digit percent value from table (e.g., 05, 10)
Special Orders:
Enter Max. allowable percent attenuation (2 digits)

PLACE 6
Internal Configuration
Enter Schematic reference Letters (1 letter)

Formerly Manufactured By McGraw-Edison Comp.: Edison Electronics Division
DAVEN DESIGN

Insulation Resistance: 100,000 megohms at 25°C.

Dielectric Withstanding Voltage 250VDC @ 50 milliamps, 5 sec Min.

Temperature Coefficient (Typ.): 100ppm/°C.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

Technitrol, Inc.

* Tolerance: ±5%, or ±2 NS W.I.G.
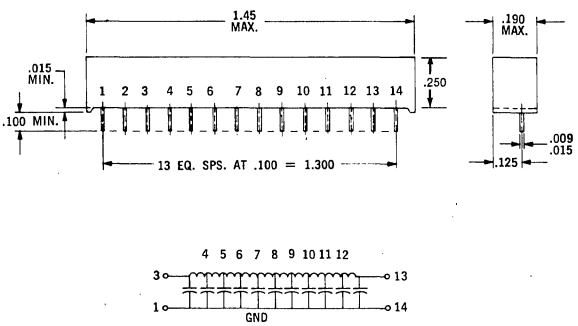
Also available in 50, 75, 200 ohm characteristic impedance, typical distortion ±10% max.

INSULATION RESISTANCE: 10K megohms at 100 VDC
HIPOT: 100 VDC
TEMPERATURE COEFFICIENT: 100 PPM/°C
TEMPERATURE RANGE: −55° to +125°C



Lead material Kovar tintillate plated
Standoff configuration may vary.

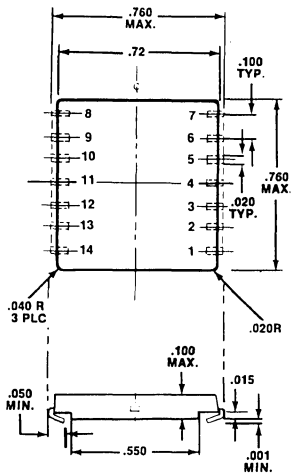
CF10Q1	200.0	40.0	12.0

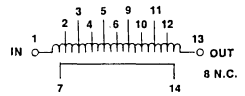
ELECTRICAL CHARACTERISTICS

- Impedance (Z_O): 100 ohms ±10%
- Tap Delay: Every 10% of total delay
- Distortion: ±10%
- Temperature Coefficient (T_D): 100 PPM/°C
- Delay Tolerance: ±1.0 NS or 5% W.I.G.
- Input Pulse Width: Minimum 3 times output rise time
- Input Rise Time: 2 NS maximum
- Also available: 50 ohm and 200 ohm impedance

FEATURES

- Compact module .10″ high
- Ten tap line provides delays from 10 NS to 200 NS
- Designed to use with TTL logic
- Can be mounted in standard chip carrier socket
- Designed for surface mounting using reflow soldering
- Military temperature range −55°C to +125°C





Also available in
¾ sq. x .100 for 0° to +70°C
¾ sq. x .175 for −55°C to +125°C

OTHER AVAILABLE MODULES

- **Standard commercial** — (listed) Commercial grade IC's (plastic package), temperature range 0° to +70°C.
- **Commercial with additional testing** — Per customer specification; add suffix "MY" to part number.
- **Military** — Temperature range −55°C to +125°C, ceramic package IC to meet MIL-STD-883 but not screened to that specification. Add suffix "M" to part number.
- **Military Hi-Rel** — Temperature range −55°C to +125°C, ceramic package IC meeting MIL-STD-883 and 38510/Mach IV program screened and burned in; add suffix "MX" to part number.
- **Low power Schottky** — LS hex inverters used.
- **Single output versions** — No taps.
- **Multiple (up to 3) individual lines per module** — Can be same or different delays.
- **Unequal taps** — Within a single line.
- **Programmable delay modules**

TTL DELAY MODULES

TTL Delay Modules are designed to be used directly with super high speed TTL, standard TTL, and DTL logic circuits. They provide many timing applications without any or with minimum interface.

TTL Delay Modules can be cascaded to get any combination of delay without degrading output rise time (T_R+ or T_R-). The delay to rise time ratio (T_D/T_R) of individual modules is very high (approximately 50:1) and improves with cascading modules.

Output rise times of each module are independent of input rise times up to 50 nsec. TTL Delay Modules are encapsulated by transfer molding. They are pin compatible with 74/54 Series TTL/SSI 14 Lead DIP Circuits.

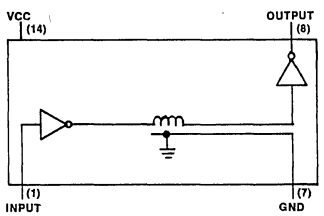
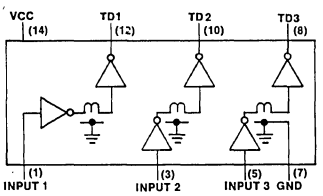
Fan Out			85 ECL Loads

SINGLE OUTPUT



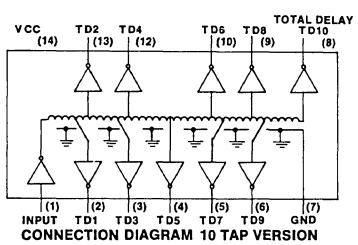
Buffered delay lines available from 5 NS to 500 NS only pins used brought out specification similar to standard 5 tap units.
Part Number TTLISXXX XXX = Delay, 025 etc.

TRIPLE OUTPUT



Delay Modules are now available in 10 tap versions from 50 to 500 NS total delay. Specifications are comparable to the standard 5 tap units. The physical outline is the same as the 5 tap with the exception of 5 additional pins as noted in the connection diagram.
Part Number TTL3SXXX, = Delay.

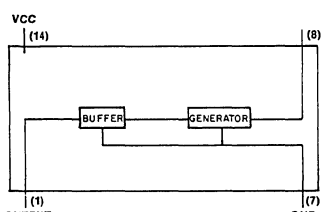
TEN TAP



CONNECTION DIAGRAM 10 TAP VERSION

TTL buffered delay lines available with 3 individual inputs and outputs in delays from 5 NS to 250 NS (each delay).
Part Number TTLDDXXX, XXX = Delay each section.

SQUARE WAVE OSCILLATOR



TTL Square Wave Oscillators are available in the range of 2 MHz to 100 MHz. Frequency tolerance ±2%. Physical outline same as 5 tap standard TTL delay line.
Part Number TTLOSXXX, XXX = Frequency.

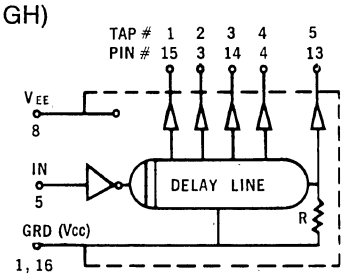
DELAY LINES

ECL DIGITAL DELAY LINES 16 PIN DIP PACKAGE (.400 WIDE x .800 LONG x .300 HIGH)

- ECL 10K compatible, input and output buffered
- Delay tolerance ±5% or ±2 Ns whichever is greater
- Typical delays shown — other delays available
- 20% taps; 70 ECL fan-out capacity
- Fast rise time on all outputs — 4 Ns typ.
- Operating temperature range −30°C to +85°C
- Supply voltage − 5.2 VDC



Pull down resistor on output taps not provided inside unit.

EMI FILTER
CAPITAL OF THE WORLD

FROM CERAMIC POWDER TO MIL-APPROVED TEST LABS . . . MURATA ERIE HAS IT ALL – 100% IN-HOUSE

Only one company can deliver your total EMI Ceramic Filter needs . . .Murata Erie.

We've been applying sophisticated ceramic and related technologies to developing superior filters for more than 40 years. Today, Murata Erie has, by far, the broadest line of subminiature EMI Filters in the world.

The scope of our product line extends from tiny high frequency filters through AC power line filters specifically designed to meet FCC requirements – filtered connectors and custom filter assemblies . . . all offering the ultimate in quality. With this experience, you receive a unique responsibility, for only Murata Erie builds the complete filter in a plant devoted exclusively to the design and manufacture of EMI Filters.

Whatever your application, we can help you achieve EMC (electromagnetic compatibility).

Write for our complete catalog EMI Filters . . . Murata Erie North America, Inc., 5 Fraser Avenue, Trenton, Ontario, Canada K8V5S1.

For technical assistance, call 613-392-2581.

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

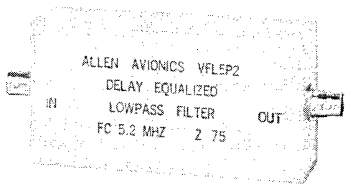
VIDEO FILTERS

DELAY EQUALIZED NTSC LOWPASS FILTERS —VFL SERIES

For the video field, we have built many lowpass filters having sharp roll-offs and good passband delay linearity with cut-off frequencies from .1 MHz to 10 MHz. The most popular of these are used to attenuate the harmonics of the NTSC color sub-carrier frequency 3.58 MHz. The most commonly used filters in this group are tabulated below:

VFL SERIES

Part No.	Maximum .25db Attenuation @ Frequency (MHz)	Maximum 3db Attenuation @ Frequency (MHz)	Minimum 45db Attenuation @ Frequency (MHz)	Approximate Passband Delay (Nanoseconds)
VFL1P7	1.75	1.92	2.41	1691
VFL2P2	2.25	2.45	3.10	1325
VFL2P7	2.75	3.00	3.77	1082
VFL3P2	3.20	3.50	4.40	928
VFL3P5	3.50	3.84	4.82	846
VFL3P8	3.80	4.16	5.22	781
VFL4P5	4.50	4.93	6.19	659
VFL5P2	5.20	5.70	7.16	570
VFL6P0	6.00	6.58	8.27	494
VFL6P5	6.50	7.12	8.95	457



Size: 4" x 2" x 1¼" in metal can with BNC Connectors.

Impedance = 75 ohms.
Maximum Insertion Loss @ 100 KHz = 1db.
Maximum Passband Ripple = ±.25db.
Maximum Delay Variation = ±3% to −.25db frequency.

NOW AVAILABLE:

Complete family of Delay Equalized Lowpass Filters with amplitude and delay characteristics similar to the above tabulated filters. These filters are offered at any cut-off frequency from 1 KHz to 10 MHz. Impedance (depending on cut-off frequency) ranges from 50 to 5000 ohms. Complete specifications are available in our extensive filters catalog.

A complete Video Delay Lines & Filters Catalog also available.

ALSO AVAILABLE NTSC FILTERS:

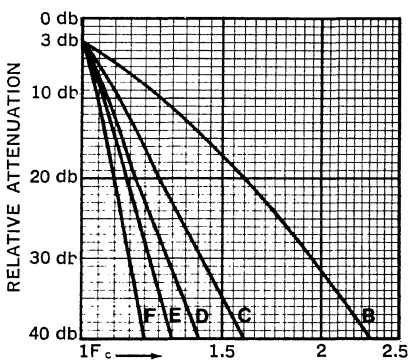
- "VCL" Series Sharpest Lowpass Delay Equalized Filters.
- "VFB3P6" Bandpass Filters to isolate chrominance information.
- "VFR" Series Reject Filters for rejection of color information to provide isolation from luminance signal.

SUB-MINIATURE FILTERS

FROM 5 MHz TO 500 MHz • PASSIVE L-C FILTER DESIGN

LOW PASS FILTERS

50 OHMS — ½db MAX. RIPPLE — ½db MAX. INSERTION LOSS



Shape Factor (See Graph)	20db	40db	Size
B	1.60	2.30	SA
C	1.25	1.60	SA
D	1.15	1.40	SB
E	1.14	1.30	SB
F	1.10	1.20	SC

FEATURING:

- Small size, lightweight.
- Low insertion loss — ½db Max.
- .5db Maximum Ripple.
- SMA Connectors standard.
- Order any cut-off frequency from 5 to 500 MHz.
- Good temperature stability.

ORDERING PROCEDURE:

Filter Type	Cut-Off Frequency	Shape Factor B, C, D, E, F (See Graph)	S (for SMA Connectors) *P (for Printed Circuit Mtg.)

EXAMPLES: ML — 500P — B — S
ML — 5P55 — D — P

Cut-off frequency can be any 3 digit number from 5 to 500 MHz. "P" represents decimal point and must be used in 2nd, 3rd or 4th location.

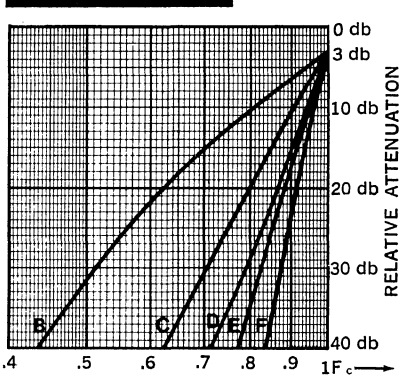
Examples: 5P55 = 5.55 MHz
58P7 = 58.7 MHz
500P = 500 MHz

* PC Mounting optional for cut-off frequencies of 100 MHz or less.

SIZE (INCHES)
Units normally supplied in metal cans with SMA Connectors on each end (.5" x .5").
SA — .80 x .50 x .50
SB — 1.00 x .50 x .50
SC — 1.25 x .50 x .50

HIGH PASS FILTERS

50 OHMS — 1db MAX. RIPPLE — 1db MAX. INSERTION LOSS



Shape Factor (See Graph)	20db	40db	Size
B	.625	.435	SA
C	.800	.625	SA
D	.870	.714	SB
E	.877	.769	SB
F	.909	.833	SC

FEATURING:

- Small size, lightweight.
- Low insertion loss — 1db Max.
- 1db Maximum Ripple.
- SMA Connectors standard.
- Order any cut-off frequency from 5 to 500 MHz.
- Good temperature stability.

ORDERING PROCEDURE:

Filter Type	Cut-Off Frequency	Shape Factor B, C, D, E, F (See Graph)	S (for SMA Connectors) *P (for Printed Circuit Mtg.)

EXAMPLES: MH — 500P — E — P
MH — 58P7 — F — S

Cut-off frequency can be any 3 digit number from 5 to 500 MHz. "P" represents decimal point and must be used in 2nd, 3rd or 4th location.

Examples: 5P55 = 5.55 MHz
58P7 = 58.7 MHz
500P = 500 MHz

* PC Mounting optional for cut-off frequencies of 50 MHz or less.

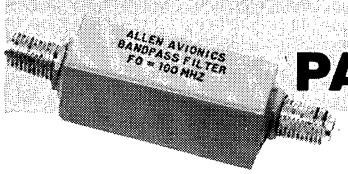
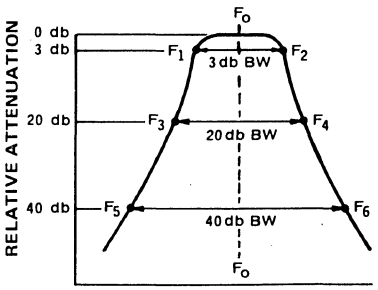
SUB-MINIATURE BANDPASS FILTERS FROM 10MHz to 500MHz PASSIVE L-C FILTER DESIGN



50 Ohms—1db Maximum Ripple

All of our filters are specified as having a minimum bandwidth at the −3db points and a maximum bandwidth at the −20 and −40db points. These filters are no exception. Most of the bandpass filters on this page do not exhibit arithmetic or geometric symmetry. However, to insure our customers of a simple method of determining their requirements, we are specifying the −3db, −20db and −40db bandwidths as if all had arithmetic symmetry. This will guarantee that at least ½ of the 3db passband will exist on each side of the center frequency. The −20db and −40db points will be no greater than ± ½ of their respective bandwidth away from the center frequency.



F_1 to F_o and F_o to $F_2 > ½$ 3db bandwidth
F_3 to F_o and F_o to $F_4 < ½$ 20db bandwidth
F_5 to F_o and F_o to $F_6 < ½$ 40db bandwidth

ORDERING PROCEDURE

Filter Type	Center Frequency (F_o)	3db Bandwidth (F_c)=$\frac{F_o}{Q}$	Shape Factor (See Table)	S (for SMA Connectors) *P (for Printed Circuit Mtg.)
	Can be any 3 digit number from 10 to 500MHz. "P" represents decimal point and must be used in 2nd, 3rd or 4th location.	Can be any 3 digit number up to 125MHz (a center frequency of 500MHz with a Q of 4). "P" represents decimal point & must be used in one of the 4 locations. The specified bandwidth must be within the limits of the tabulated Q. (See examples below.)		

EXAMPLE: MB − 99P5 − 4P50 − A − S

This Part No. describes a bandpass filter having its center frequency at 99.5MHz and having a 3db bandwidth of 4.50MHz with an "A" shape factor and SMA Connectors. Note in tabulation below that for a center frequency of 100MHz, and a shape factor of "A", a Q of up to 30 is realizable.

EXAMPLE: MB − 10P0 − P200 − A − S

This Part No. describes a bandpass filter having its center frequency at 10.0MHz and having a 3db bandwidth of .200MHz with an "A" shape factor and SMA Connectors. Note in tabulation below that for a center frequency of 10MHz, and a shape factor of "A", a Q of 50 is realizable.

*PC Mounting optional for center frequencies of 100MHz or less.

Shape Factor	20db / 3db	40db / 3db
A	3.6	8.0
B	2.6	4.8
C	2.3	3.4
D	2.0	2.6

SIZE (INCHES)

CUSTOM-BUILT L-C FILTERS LINEAR PHASE LOWPASS

LINEAR PHASE LOWPASS FILTERS

Types:
Bessel, Gaussian, Equal Phase Ripple and Transitional (Gaussian to 6 db).

Frequency Range:
400Hz to 50MHz.

Impedance Range:
50 ohms to 20K ohms.

Low Delay and Phase Distortion in Passband.

Very Low Pulse Distortion (Low Overshoot).

Construction:
Epoxy encapsulated or sealed in metal can.

DELIVERY: PROTOTYPES CAN OFTEN BE DELIVERED IN LESS THAN 7 DAYS

The lowpass filters listed below are typical units that we build. We do manufacture linear phase lowpass filters with any cut-off frequency between 1KHz and 50MHz.

SIZE (INCHES)

Sealed in Metal Can. Printed Circuit Terminals, End Terminals or Connectors available where applicable:

K — 1.50 x 1.000 x .800
L — 2.00 x 1.625 x 1.125
M — 3.00 x 1.625 x 1.125
N — 4.00 x 1.500 x 1.250

Encapsulated in Epoxy Container:

U — 2.00 x 1.125 x .750
W — 2.50 x 1.125 x .750
X — 3.00 x 1.500 x 1.000
Y — 4.00 x 1.500 x 1.125
Z — 4.50 x 2.500 x 1.375

The graph at right illustrates ideal delay characteristics.
Consult table below for typical realizable values.

Shape Factor	Max. Phase Distortion	Maximum Overshoot	Typical Delay Variation
A	±2°	1.5%	3%
B	±2°	1.5%	3%
C	±2°	1.5%	3%
D	±3°	3%	8%
E	±7°	6%	13%
F	±12°	9%	17%

SHARP DELAY EQUALIZED LOWPASS FILTERS

By the utilization of delay equalization techniques, Allen Avionics now designs and manufactures a complete line of sharper cut-off, flat delay lowpass filters than shown above. We offer these with 40db to 3db ratios as small as 1.22 and delay distortion of less than 10%.

Call/Write for Most Comprehensive L-C Filters Catalog in Industry

Allen Avionics is staffed and organized to provide precision L-C Filters and Delay Lines with fast delivery. Your most difficult engineering problems are solved by our high level engineering staff in conjunction with sophisticated computer programs, enabling rapid filter design determination.

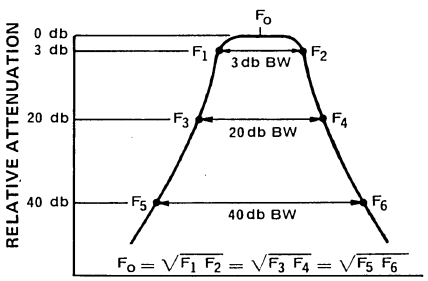
Allen Avionics computer designs are generated for the four basic filter types: Lowpass, Highpass, Bandpass, and Bandstop. These are built-in Butterworth, Tchebycheff, Elliptical, Gaussian, and Bessel functions. All Allen Avionics products are manufactured in the U.S.A.

BANDPASS

FAST DELIVERY ON PROTOTYPES

Types: Butterworth, Tchebycheff, and Elliptic Function.
Frequency Range: 400 Hz to 30 MHz.
Impedance Range: 50 ohms to 10K ohms.
Construction: Epoxy encapsulated or sealed in metal can.
Order any center frequency required. Interpolation between frequencies listed below is valid.

Shape Factor	20 db BW / 3 db BW	40 db BW / 3 db BW
Ao	3.65	7.85
B	1.60	2.50
C	1.45	1.85
E	1.20	1.45



1 db MAXIMUM RIPPLE

SIZE (INCHES)

Sealed in Metal Can. Printed Circuit Terminals, End Terminals or Connectors available where applicable:

M — 3.00 x 1.625 x 1.125
N — 4.00 x 1.500 x 1.250
O — 5.00 x 1.500 x 1.250
P — 6.00 x 1.500 x 1.250
Q — 7.00 x 1.500 x 1.250
NN — 4.00 x 4.000 x 1.250
OO — 5.00 x 4.000 x 1.250

Encapsulated in Epoxy Container:

V — 1.75 x 1.750 x .875
W — 2.50 x 1.125 x .750
X — 3.00 x 1.500 x 1.000
Y — 4.00 x 1.500 x 1.125
Y_1 — 4.00 x 2.000 x 1.250
Z — 4.50 x 2.500 x 1.375

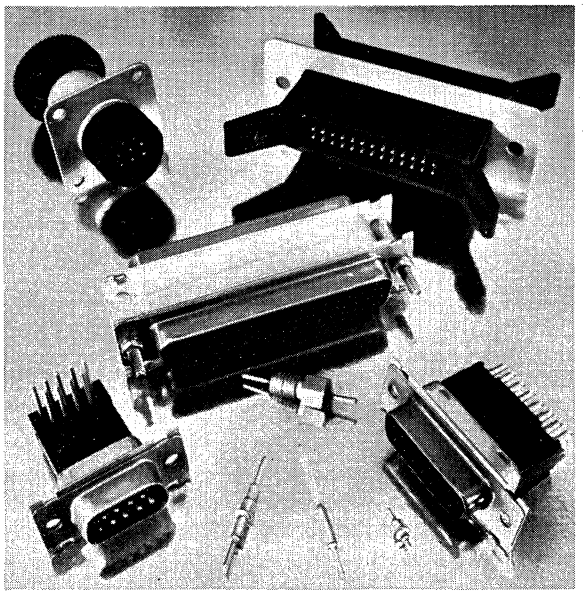
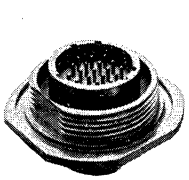
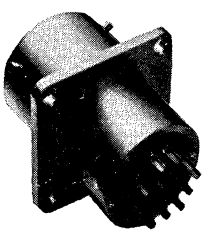
AMP Makes the Difference in Filters







All the above connectors are available in filtered version.

Proven, Inexpensive Filtering. AMP Quiet Line Filters provide proven, inexpensive filtering of conducted electro-magnetic interference (EMI) and general system noise. Available as loose pieces or as components of preassembled connectors, AMP Quiet Line Filters are divided into Standard and Premium groups. Standard series filters are appropriate for most commercial applications. Generally, Premium series filters offer higher operating voltage maximums, withstand higher operating temperatures and provide higher dielectric withstanding voltage and insulation resistance. Also, Premium series filters are subjected to environmental testing typical of components for military applications.

Standard and Premium filter groups are divided as follows: Within the Standard group there are three series having normal capacitance (20, 30 and 50 series having 1000, 2000 and 3000 picofarads min., respectively). Within the Premium group there are three series having normal capacitance (20P, 30P and 50P series having 1500, 3000 and 4000 picofarads min., respectively).

Standard low capacitance filters are divided into two series: The 60 series having 175 picofarads max., and 70 series having 400 picofarads max.

Quiet-Line Series—Comparison of Minimum No-Load Insertion Loss.

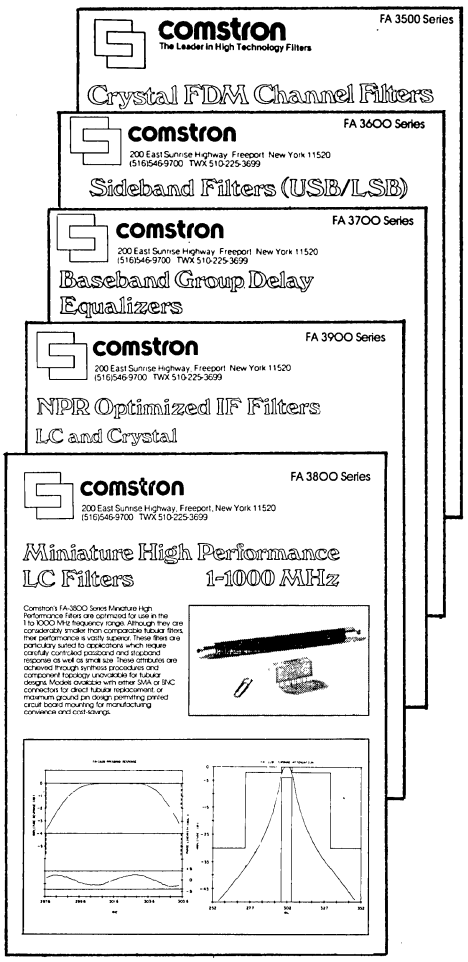
TECHNOLOGY " + " FILTERS

The Extra Edge in Systems Performance DC to 1 GHz

Comstron has developed optimum frequency or time domain filters to produce near theoretical system performance. These technology + filters are available as catalog items or custom tailored to your needs.



Design

Comstron has implemented modern network synthesis and physical realization techniques to the point where highly reliable, compact, LC and crystal filters are available – quickly and economically. Proprietary computer analysis, modeling, and optimization programs efficiently arrive at near-optium solutions to spectral, time domain, and stochastic problems. The Company's Enhanced Synthesis Program (ESP), Filter Optimization Program (FOP) and Parameter Optimization Program (POP) provide design parameters for systems oriented functions. Requirements for group delay equalization, wide band arithmetic symmetry, x/sin x amplitude correction, corrected Nyquist filters, phase compensation, and time domain response designs are routinely and efficiently handled.

Test

The Company's commitment to excellence is evident in its extensive test facilities. Automatic computer based network analyzers cover the frequency range from dc to 1.3 GHz with full plotting and printer output capability. Parameters which are automatically measured include amplitude response, phase response, group delay, and return loss. Time domain testing can also be performed to verify impulse response or response to complex waveforms.
Computer directed environmental testing allows unattended measurements of performance over temperature on a production basis. Comstron's proprietary Automatic Filter Test (AFT) programs permits rapid and accurate generation of acceptance test procedures as well as full documentation and data files when required.

Quality Control

Comstron maintains a Quality Control Department that ensures compliance with MIL-I-45208A and MIL-Q-9858A when applicable. Microscopic inspection, controlled environment, material control and traceability, solder training programs, and strict configuration management all contribute to producing an exceptionally reliable product.
The quality control program is continuously monitored. Over the years since its inception, Comstron has assembled a dedicated, conscientious staff whose pride of workmanship and customer loyalty is the keynote of the Company.

Standard Filter Catagories

- FDM Channel
- Quad Phase Matched
- Miniature L.C.
- USB/LSB
- Fiber Optic Repeater
- Group Delay Equalizer
- NPR Optimized
- Pulse Response Optimized
- Nyquist
- Video
- Speech Plus
- Group/Super Group/Master Group/Pilot Notch
- 70/140 MHz Satellite IF Filters
- 70 MHz Switchable Equalizer (Delay or Amplitude)

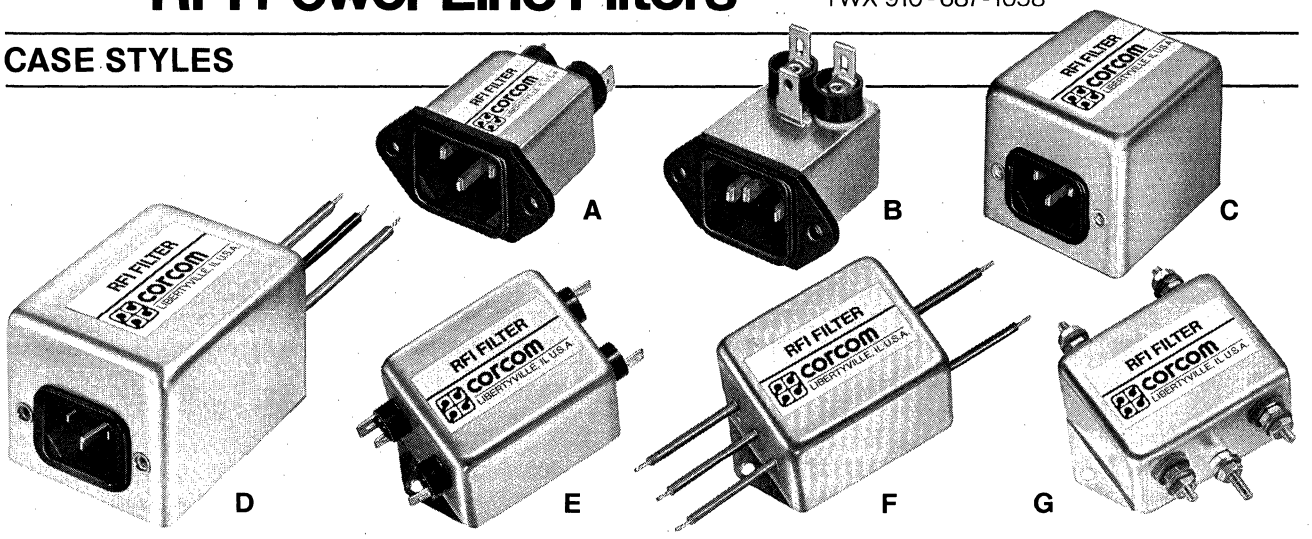
CASE STYLES



CORCOM'S FAMILY OF PRODUCTS

B Series
General purpose common mode filters.
Available in case styles E, F, and G.
Current ratings: 1, 2, 3, 5, 10, 20, 30 amps.

EF Series
Attenuation performance similar to B series, small package with IEC connector. Available in case styles A and B.
Current ratings: 1, 3, 6 amps.

ED Series
Enhanced common mode plus differential mode performance in the EF package.
Available in case styles A and B.
Current ratings: 1, 3, 6 amps.

K Series
General purpose common mode performance (similar to B and EF) plus differential mode performance. Available in case styles C, E, F, and G.
Current ratings: 1, 2, 3, 5, 10, 20, 30 amps.

R Series
Dual section filter for high common and differential mode performance in low impedance equipment such as synchronous motors. Available in case styles C, E, F, and G.
Current ratings: 1, 2, 3, 5, 10, 20 amps.

SK Series
Enhanced common mode performance from high inductance; enhanced differential mode performance from high capacitance; peak current capability; best suited to high impedance loads. Available in case styles C, E, and F.
Current ratings: 3, 6, 10 amps.

EH Series
Special purpose filters for medical equipment that must comply with the extremely low leakage current requirements of UL544, Patient Care category. Available in case styles A, B, and E.
Current rating: 6 amps.

S, V, W Series
In addition to common mode attenuation, these units provide significantly higher differential mode inductance. Available in case style E.
Current ratings: 3, 6, 10, 20 amps.

S—Differential mode performance with common mode attenuation optimized for 150kHz to 30MHz.

V—Additional differential mode element over the S series for use with low impedance equipment.

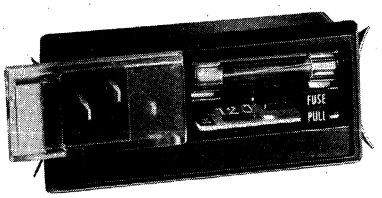
W—Differential mode performance of V series with common mode enhancement in the mid and high frequency ranges, for use with high impedance equipment.

EP Series
Dual section filter for low impedance loads with high performance common and differential mode attenuation from 150kHz to 30MHz for switching power supplies.
Available in case styles C, E, and F.
Current ratings: 3, 6, 10 amps.

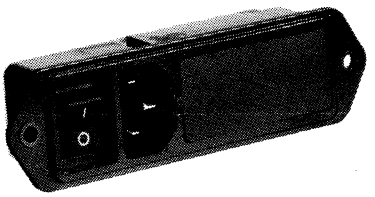
Q Series
High performance unit with peak current capability, common/differential mode attenuation and impedance optimized for VDE emission control of switching power supplies from 10kHz to 30MHz.
Available in case styles D, E, and F.
Current rating: 3 amps.

SP Series
Dual section filter with enhanced common mode attenuation compared to the EP through application of additional line-to-ground capacitance. Available in case style E.
Current ratings: 3, 6, 10 amps.

J SERIES AND M SERIES/POWER ENTRY MODULE



J Series/Voltage Selecting and Fused Connector
Developed for the manufacturer who markets products worldwide, the VS & F Connector eliminates the need for internal wiring changes, special power supplies or the need for stocking different line cords. Designed with an internationally approved line cord connector, a fuse holder and a unique voltage selector card. Available unfiltered or filtered.



M Series/Power Entry Module
Corcom's Power Entry Module is the new generation of Corcom's VS & F Connector. Incorporated into one unit are the following:
- IEC Line Cord Connector
- Fuseholder, capable of using one U.S. or two European fuses
- Optional DPST Power On/Off Rocker Switch
- Optional 2-Voltage or 4-Voltage Card Selection

SHORT FORM CATALOG

DIP-ACTIVE FILTERS SERIES 5151-5353

SPECIFICATIONS

- **Transfer characteristics** — Butterworth
- **Gain in pass-band** — 0 db ± .2 db.
- **Cut-off frequency accuracy** — ± 2% @ -3 db.
- **Maximum input voltage** — 10 volts peak.
- **Skirt Attenuation** — 24 db / octave.
- **DC drift** — 20uV / °C typical.
- **Supply Voltage** — ±15V typical (±9V to ±18V operational).
- **Temperature range** — 0° to +70°C (standard); -55°C to + 125°C (on request).
- **Temperature Coefficient** — .03% / °C. Better on request.
- **Power Consumption** — 200MW Maximum.

SPECIFICATIONS

- **Response:** See graph.
- **Gain @ fc:** 10 db typical.
- **Center Frequency Accuracy:** ±1%.
- **Input Voltage:** 1v rms Max.
- **Supply Voltage:** 15Vdc.
- **Temperature Range:** 0° to 70°C.
- **Temperature Coefficient:** .03%/°C.
- **Power Consumption:** 625 MW @ 25°C.
- **Output Load:** 600 Min.

DELTA EMI POWER LINE FILTERS

DB Series
These filters are designed as general purpose filters which can be used in a wide variety of electrical and electronic equipment. DB series filters effectively provide EMI suppression of line-to-ground noise in a small size at lowest cost.

DC Series, SC Series
DC series and SC series filters are designed to reduce conducted noise to acceptable limits for switching power supplies that have to comply with VDE and FCC requirements, and are suitable for custom designs. Both filters provide ground-lead inductors to attenuate high frequency line-to-ground noise. DC series filters are designed for high impedance loads and SC series filters for low impedance loads.

DD Series, SD Series
These filters are also designed to reduce conducted noise to acceptable limits for switching power supplies that have to comply with VDE and FCC requirements. Besides being suitable for custom designs, DD series are designed for high impedance loads while SD series are designed for low impedance loads.

DE Series
DE Series filters are compact and reliable at lowest cost. With an IEC power line connector, they are designed as general purpose filters providing effective EMI suppression of line-to-ground noise.

SE Series
SE series filters are designed to reduce conducted noise to acceptable limits for switching power supplies that have to comply with VDE and FCC requirements. These filters are suitable for custom design. IEC power line connector used.

DK Series
DK series filters are very effective in suppressing line-to-line and line-to-ground EMI noise. They are used in computers, peripheral equipment and industrial applications where pulsed, continuous and/or intermittent noise is present.

DP Series
DP series filters are designed to reduce conducted noise to acceptable limits for switching power supplies that have to comply with VDE and FCC requirements. They are designed to provide high insertion loss for line-to-line and line-to ground emission throughout the frequency range.

DR Series
DR Series filters provide premium performance in suppressing line-to-line and line-to-ground noise at moderate cost. They are very suitable for low impedance load equipment where EMI noisy environments are present and can be used in many kinds of industrial equipment and computers where pulsed, continuous and/or intermittent EMI noise is present.

Specifications For All Series
Rated voltage: 115/250 VAC

Operating frequency: 50-60 Hz

Maximum leakage current: each line to ground:
115V 60 Hz — 0.5 mA
250V 50 Hz — 0.5 mA
measured according to UL 1283 PAR. 24

High pot test, 1 minute line to ground: 2250 VDC
line to line: 1450 VDC

Minimum insertion loss (dB)
Common mode, 50 ohms system

Main Features of Delta EMI Filters
DELTA EMI filters are designed and built in full conformance with UL Standard 1283, CSA Standard C22.2 No. 0.4 and VDE 0565 parts 1, 2 and 3. All EMI filters are UL recognized ( ), most have CSA ( ) approval, and VDE approval is in process for the entire line. Latest agency approvals are detailed in our complete catalog, available upon request.

All filters are built with a specially designed core cover that automatically maintains sufficient creepage distance between compensation choke windings. All terminals have an anti-rotation feature and are designed to maintain sufficient creepage distance between terminal and ground.

All electrical connections are soldered and mechanically secured. Every filter must pass 100% hipot, current leakage and insertion loss tests before shipment.

Custom Designs
Contained herein is Delta's complete line of standard filters. If our standard products cannot solve your particular EMI problems, our engineers will work with you to design and fabricate custom filters that are tailored to your specific requirements.

Service and Support
Delta filters are stocked at selected distributors nationwide, and our local sales representatives in your area are ready to help you select the right Delta filter for your requirements. Please contact our Customer Service Department at (415) 785-5231 for further information.

Delta's Part Numbering System
Delta's part numbering system is made up of three elements which, when properly sequenced, fully and easily identify the required filter.
For example:

05	DB	AG3W2
CURRENT RATING	SERIES	MECHANICAL CONSTRUCTION

Current Rating: AC RMS
e.g.: 05 = 5 Amps AC RMS

Series: Electrical Circuits — see adjacent table

Mechanical Construction:
A = Case Style — see examples on adjacent page
G = Lug
W = PVC Wire
S = Screw
e.g.: G3W2 = 3 lugs + 2 lead wires

epc CORPORATION

MANUFACTURERS OF ACTIVE AND PASSIVE FILTERS—DC TO 50MHz.

LOWPASS, HIGHPASS, BANDPASS, BANDREJECT CUSTOM OR STANDARD DESIGNS.

FILTER TYPES

- Elliptic
- Chebychev
- Butterworth
- Bessel
- Gaussian
- Legendre
- Inverted Chebychev
- Audio Frequency
- Equalizers
- Harmonic
- IF
- Video
- Telemetering
- Tone, Telegraph
- Constant group delay
- Wideband Band Pass
- Phase matched
- Attenuation matched

Components manufactured to rigid MIL-STD specifications with operating temperature range from −55°C to + 125°C.

CUSTOM BUILT FILTERS PROMPT DELIVERY

The filters listed here are some of the typical units we build. We can design filters to your exact specifications. Call for more information.

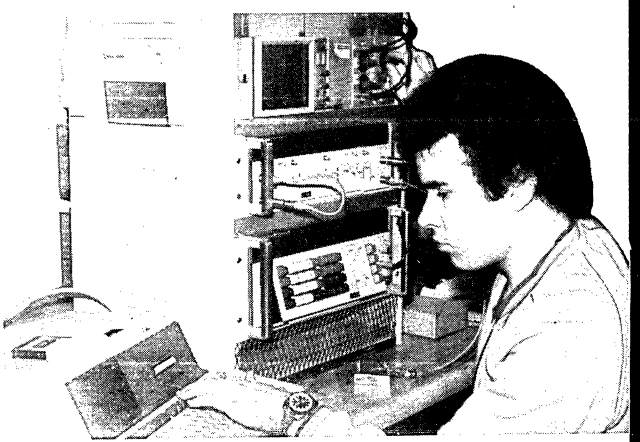
DC TO 500 MHZ

30 Year Leadership in Quality and Reliability!



Covering a range of DC to 500 Mhz, ESC designs and manufactures a wide variety of LC filters for commercial and military high reliability applications. Starting with computer aided design through final test on ESC's computer controlled Network Analyzer, ESC's long history of quality and experience assures maximum component efficiency and reliability. ESC has established controlled manufacturing facilities with certified operators to produce components to all levels of reliability from missile applications to space probe environments. Conformance to MIL-F-18327 is normal and to MIL-Q-9858A as required.

Dual-in-Line (14 Pin) LC Filters-Miniature
Size: .76L X .46W X .28H, From 1Khz to 10 Mhz.
Series DIFL20 - Low Pass, 20db Stopband at $1.4f_c$
Series DIFL39 - Low Pass, 39db Stopband at $2.5f_c$
Series DIFLP - Linear Phase, 30db at $5.0f_c$
Series DIFH20 - High Pass, 20db at $.715f_c$
Series DIFH39 - High Pass, 39db at $.4f_c$

Flatpack LC Filter Series-2Khz at 50 Khz
Epoxy molded for P.C. Board mounting, maximum height of .350 and volume of .35 to .55 cubic inches.
Series FL - Low Pass, 130db/octave roll-off
Series MFL - Low Pass, 100db/octave roll-off
Series MFH - High Pass, 100db/octave roll-off
Series CF - 15% Band Pass
Series DF - 20% Band Pass
Series LF - 60% Band Pass

High Frequency Filter Series-Reduced Sizes
Series HFLD - Low Pass 50 to 500 Mhz
60db Stopband $1.4f_c$ and above
Size: 2.1 X .65 X .30
Series HFLB - Low Pass 50 to 500 Mhz
60db Stopband $1.2f_c$ and above
Size: 2.5 X 1.0 X .30
Series HF - Band Pass 50 to 200 Mhz
Size: 2.1 X .65 X .30

FILTER TYPES
• LOW PASS • HIGH PASS • BAND PASS
• BAND REJECT • CONSTANT DELAY
• HIGH ATTENUATION • LINEAR PHASE
• PHASE & AMPLITUDE MATCHED
• DELAY & AMPLITUDE MATCHED
• BUTTERWORTH • CHEBYSCHEV • BESSEL
• CAUER (ELLIPTICAL) • GAUSSIAN AND OTHERS;
• AUDIO • VIDEO • RF • MINIATURE...

INDUSTRIAL APPLICATIONS
• DATA MODEM • SONOBUOY • ASW
• COMMUNICATIONS • MEDICAL
• MILITARY • TELEPHONE INDUSTRY
• HIGH REL • TO MIL-F-18327

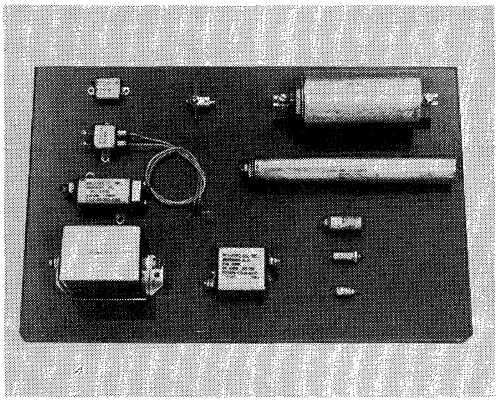
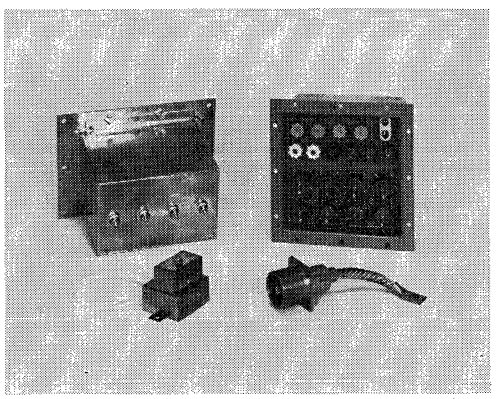
LC FILTERS DC to 500 Mhz

FIL-COIL RFI/EMC EXCELLENCE

ELECTRONIC FILTERS FOR MILITARY, INDUSTRIAL AND COMMERCIAL USERS





- **FILTERS FOR POWER LINE**
- **SECURE COMMUNICATIONS**
- **SCREEN ROOM**
- **RFI/EMC FILTERS**
- **FIL-COIL COMMUNICATION & SIGNAL LINE FILTERS**
- **TELEPHONE LINE FILTERS**
- **RF FILTERED & SHIELDED CIRCUIT BREAKER PANEL BOXES**

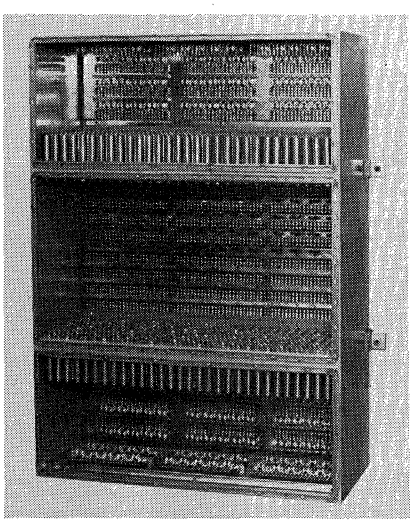
Frequency Range — 0 Hz to over 50 GHz

Current Range — 0 Amps to over 1500 Amps

Voltage Ratings — Up to 2400 V.A.C.: 10,000 V.D.C.

Quality 1. Complies with MIL-F-15733E
2. Where required, manufactured to UL, QPL, CSA, VDE and other international testing standards

UL APPROVED



EMP Power and Signal Filters for government and NATO communication centers. Designed for EMP protection per DCPA and NICSMA guidelines. Two classes of filters are available:

Class A — Power Line and Control Cables

Class B — Signal Line and Communication Cable

Dimension: (unit shown) 5′ x 4′ x 2′

DESCRIPTION: Current carrying conductors protected by MOV, GAS-GAP and ZENER DIODES selected i/a/w electrical ratings. Elements are factory mounted and wired in filter cabinets.

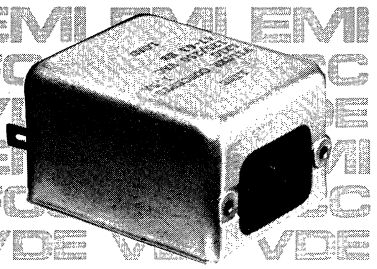
HIGH-PERFORMANCE APPLICATION ENGINEERED EMI FILTERS

- PERFORMANCE PROVEN & TESTED with OEM & custom design switching and linear power supplies
- INDUSTRY'S WIDEST SELECTION OF EMI filters for switchers requiring single or multiple phase AC power



SE SERIES
SWITCHING POWER SUPPLY FILTER

Our most compact and economical T section filter for applications using switching power supplies and required to meet FCC conducted EMI specifications.

SE Series EMI filters are designed to provide balanced differential and common mode insertion loss for reliable performance at 450KHz and above with the typical off line type switcher.

Available as a standard product in 3 Amp to 50 Amp versions, the SE is also a proven problem solver in applications where EMI susceptability is the prime concern.

Part No.	Current	Case	Leakage*
SE3	3A	2.75x1.75x.87	0.8 mA
SE7	7.5A	2.75x2.0x1.25	0.8mA
SE15	15A	3.31x2.0x1.5	0.8mA
SE30	30A	4.0x2.8x2.0	1.6mA
SE50	50A	5.5x3.0x2.7	1.6mA

Rated Voltage: 250VAC 47-63Hz
Test Voltages: Line To Line: 1.5 KVDC
Line To Gnd: 2.2 KVDC
Insertion Loss: (50 ohms)

	.05MHz	.15MHz	.50MHz	1.5MHz	5.0MHz	20MHz
L/G	7db	15db	50db	65db	65db	55db
L/L	7db	15db	50db	60db	55db	50db

SF SERIES
HIGH PERFORMANCE SWITCHING SUPPLY FILTER

Designed for applications required to meet the VDE conducted EMI spectrum, the SF Series filter offers extended low frequency performance.

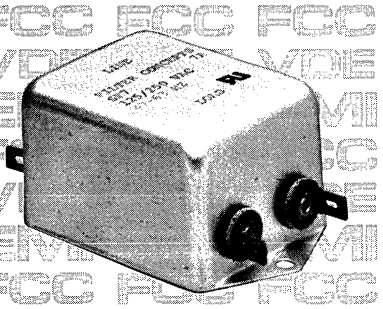
SF Series T section filters are designed to effectively attenuate differential and common mode noise from switching supplies down to the 150KHz enforced limit of VDE 0871 and 0875 spectrums.

SF filters, with their extra performance, can also provide the added margin needed to meet FCC requirements when working with unusually noisy equipment.

Part No.	Current	Case	Leakage*
SF3	3A	2.75x2.0x1.25	0.8mA
SF7	7.5A	3.56x2.0x1.5	0.8mA
SF15	15A	4x2.87x2.0	0.8mA
SF30	30A	5.5x3.0x2.75	1.6mA

Rated Voltage: 250VAC, 47-63Hz
Test Voltages: Line To Line: 1.5KVDC
Line To Gnd: 2.2KVDC
Insertion Loss: (50 ohms)

	.05MHz	.15MHz	.50MHz	1.5MHz	5.0MHz	20MHz
L/G	8db	45db	65db	65db	65db	60db
L/L	15db	45db	60db	60db	65db	60db



TF SERIES
HIGH PERFORMANCE LOW LEAKAGE SWITCHING SUPPLY FILTER

High performance low leakage T section filter provides extended low frequency attenuation for applications required to meet enforced VDE conducted EMI spectrums.

TF Series filters provide the balanced differential and common mode performance plus the low leakage current often required for products using off line switching power supplies.

The extra performance of the TF filter can also provide the additional margin needed to meet FCC specs when working with unusually noisy equipment.

Part No.	Current	Case	Leakage*
TF1	1A	2.75x1.75x.87	.45mA
TF2	2A	2.75x1.75x1.12	.45mA
TF3	3A	2.75x2.0x1.25	.45mA
TF5	5A	3.31x2.0x1.5	.45mA
TF10	10A	6.0x2.0x1.5	.45mA

Rated Voltage: 250VAC, 47-63Hz
Test Voltages: Line To Line: 1.5KVDC
Line To Gnd: 2.2KVDC
Insertion Loss: (50 ohms)

	.05MHz	.15MHz	.50MHz	1.5MHz	5.0MHz	20MHz
L/G	10db	48db	>65db	>65db	>65db	60db
L/L	12db	40db	55db	60db	60db	60db

SX SERIES
PREMIUM SWITCHING POWER SUPPLY FILTER

With an extra 15 db to 20 db of performance at 150KHz, our SX Series filters solve severe conducted EMI problems in equipment required to meet the enforced spectrum of VDE 0871 and 0875 (150KHz to 30MHz).

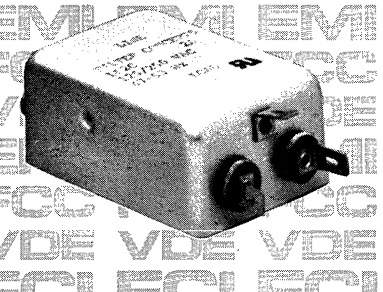
SX Series T section filters are designed to remain effective independent of wide variations in line and load impedance and noise characteristics.

Available in load current ratings from 3 Amps to 60 Amps, the SX Series maintains its high level of performance independent of current ratings.

Part No.	Current	Case	Leakage*
SX3	3A	3.31x2.0x1.5	0.8mA
SX7	7.5A	5.0x2.0x2.0	0.8mA
SX15	15A	5.5x3.0x2.75	1.6mA
SX30	30A	8.25x3.0x2.75	1.6mA
SX60	60A	12.0x6.5x4.5	2.4mA

Rated Voltage: 250VAC, 47-63Hz
Test Voltages: Line To Line: 1.5KVDC
Line To Gnd: 2.2KVDC
Insertion Loss: (50 ohms)

	.05MHz	.15MHz	.50MHz	1.5MHz	5.0MHz	20MHz
L/G	20db	60db	>65db	>65db	60db	55db
L/L	30db	60db	>65db	>65db	60db	50db



DF SERIES
SWITCHING POWER SUPPLY OUTPUT FILTER

Differential and common mode filter for the regulated DC outputs of switchers allows error free operation of low level analog circuitry.

DF Series filters are designed to work with the logic and drive voltages of typical peripheral devices such as disc drives or to isolate the power for these devices from other noisy system components.

Part No.	Current	Case	Leakage*
DF104	10 Amps	2.75x2.0x1.25	N/A
DF106	10 Amps	3.31x2.0x1.50	N/A

Rated Voltage: 50VDC
Test Voltage: Line To Gnd: 100VDC
Insertion Loss: (50 ohms)

	.05MHz	.15MHz	.50MHz	1.5MHz	5.0MHz	20MHz
L/G	15db	25db	35db	50db	50db	50db
L/L	3db	15db	35db	45db	50db	50db

Includes a minimum of 10mfds at the load.

*Each line to Gnd @ 250 VAC/50 Hz

HIGH-PERFORMANCE APPLICATION ENGINEERED EMI FILTERS

- PERFORMANCE PROVEN & TESTED with OEM & custom design switching and linear power supplies
- INDUSTRY'S WIDEST SELECTION OF EMI filters for switchers requiring single or multiple phase AC power

LF SERIES
LOW LEAKAGE PI SECTION FILTER FOR SWITCHERS

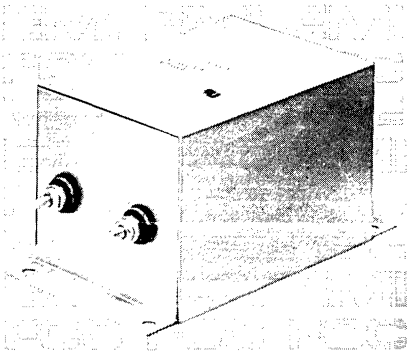
High performance low leakage Pi section filter offers enhanced differential insertion loss in an inexpensive compact package.

The LF Series is designed to work with the existing input filter of an off line switcher or the input power transformer of a switching regulator. The LF filter improves common mode performance and provides the extra differential insertion loss often required in these applications to meet FCC or VDE specifications.

Part No.	Current	Case	Leakage*
LF2	2A	2.75x1.75x.87	.45mA
LF3	3A	2.75x2.0x1.25	.45mA
LF7	7A	3.31x2.0x1.5	.45mA
LF15	15A	4.0x2.87x2.0	.45mA

Rated Voltage: 250VAC, 47-63Hz
Test Voltages: Line To Line: 1.5KVDC
Line To Gnd: 2.2KVDC
Insertion Loss: (50 ohms)

	.05MHz	.15MHz	.50MHz	1.5MHz	5.0MHz	20MHz
L_G	18db	30db	42db	50db	50db	50db
L_L	6db	30db	60db	60db	60db	60db



LX SERIES
PREMIUM LOW LEAKAGE PI SECTION FILTER FOR SWITCHERS

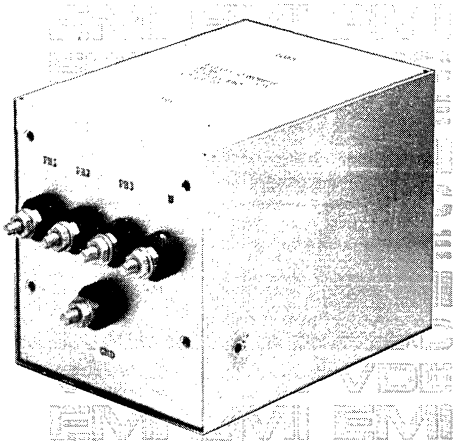
Providing significant performance from 10KHz to 30 MHz, the LX Series filter is designed for applications required to meet the proposed 10KHz to 150KHz extension of VDE 0871 and 0875 spectrums and FCC electrical equipment and appliance specs.

The LX Series EMI filter is designed to work with the existing filter in a switching supply or as a stand alone unit. It provides the extra differential and common mode low frequency insertion loss required while maintaining good high frequency characteristics.

Part No.	Current	Case	Leakage*
LX1	1.5A	2.75x2.0x1.25	0.45mA
LX3	3A	3.31x2.0x1.5	0.45mA
LX7	7.5A	4.0x2.87x2.0	0.8mA
LX15	15A	6.0x3.0x2.75	1.2mA

Rated Voltage: 250VAC 47-63Hz
Test Voltages: Line To Line: 1.5KVDC
Line To Gnd: 2.2KVDC
Insertion Loss: (50 ohms)

	.05MHz	.15MHz	.50MHz	1.5MHz	5.0MHz	20MHz
L_G	30db	40db	50db	50db	50db	50db
L_L	40db	>65db	>65db	>65db	>65db	60db



3E SERIES
3 PHASE T SECTION FILTER

High performance with switching power supplies in 3 phase Wye or Delta configurations is offered by this Series.

3E Series T section filters are proven performers with single or multiple switching supplies in balanced or unbalanced load configurations. An alternate AC power cord ground termination isolates high frequency ground noise via a low reactance series inductor. Available in current ratings up to 60 Amps per phase (180 Amps total), 3E filters are also very effective in solving EMI susceptability problems in numerical control and other types of machinery.

Part No.	Current	Case	Leakage*
3E20	20A/PH	4.81x4.0x4.0	2.0mA
3E30	30A/PH	4.81x4.0x4.0	2.0mA
3E60	60A/PH	9.12x5.0x4.5	3.0mA

Rated Voltage: 250VAC, 47-63Hz
Test Voltages: Line To Line: 1.5KVDC
Line To Gnd: 2.2KVDC
Insertion Loss: (50 ohms)

	.05MHz	.15MHz	.50MHz	1.5MHz	5.0MHz	20MHz
L_G	3db	25db	55db	60db	50db	50db
L_L	12db	22db	50db	55db	50db	50db

3F SERIES
HIGH PERFORMANCE 3 PHASE FILTER

Extended low frequency performance is offered for 3 phase applications required to meet VDE conducted EMI spectrums with switch mode power supplies.

3F Series T section filters effectively attenuate differential and common mode noise from switching power supplies down to the 150 KHz enforced limit of VDE 0871 and 0875 spectrums.

3F filters, with their extra performance, can also provide the added margin needed to meet FCC requirements when working with unusually noisy equipment.

Part No.	Current	Case	Leakage*
3F15	15A/PH	6.5x4.0x4.0	2.0mA
3F30	30A/PH	9.12x5.0x4.5	2.5mA
3F60	60A/PH	13.25x6.0x5.0	3.0mA

Rated Voltage: 250VAC, 47-63Hz
Test Voltages: Line To Line: 1.5KVDC
Line To Gnd: 2.2KVDC
Insertion Loss: (50 ohms)

	.05MHz	.15MHz	.50MHz	1.5MHz	5.0MHz	20MHz
L_G	10db	50db	>65db	>65db	>65db	60db
L_L	15db	50db	60db	60db	60db	55db

GF SERIES
L SECTION FILTER WITH SYSTEM GROUND ISOLATOR

A system filter with good general purpose performance, the GF Series was designed for AC input and distribution applications.

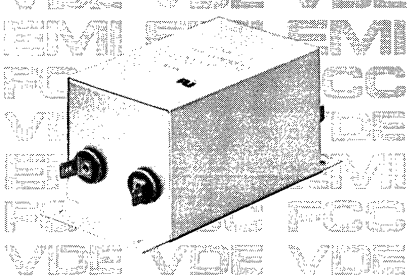
GF filters include an alternate ground termination for the AC power cord. This termination isolates high frequency noise from the AC mains via a low reactance series inductor. This high frequency ground isolator is very effective in inter-connected systems where AC power is derived from multiple outlets.

Part No.	Current	Case	Leakage*
GF10	10A	3.31x2.0x1.5	1.0mA
GF20	20A	4.0x2.87x2.0	1.0mA
GF30	30A	4.0x2.87x2.0	1.5mA

Rated Voltage: 250VAC, 47-63Hz
Test Voltages: Line To Line: 1.5KVDC
Line To Gnd: 2.2KVDC
Insertion Loss: (50 ohms)

	.05MHz	.15MHz	.50MHz	1.5MHz	5.0MHz	20MHz
L_G	10db	22db	32db	45db	50db	40db
L_L	15db	25db	35db	35db	30db	40db

*Each line to Gnd @ 250 VAC/50 Hz



FCI reserves the right to make specification changes without notice.

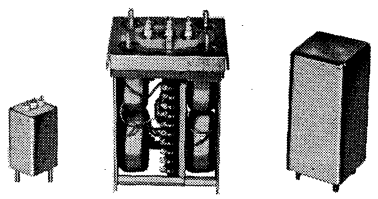
HERTZ FILTERS

BAND PASS FILTERS CUSTOM DESIGNED TO FILL YOUR NEEDS



Hertz Filter Corporations' engineering department is made up entirely of specialists in the field of custom design of band pass filters. They are all fully experienced and prepared to help you solve your filter problems. Call or write Hertz for reliable service and prompt delivery.

FEATURES

1. Filters, Band Pass, Passive
2. Center Frequencies — 50 Hz to 50 Meg Hz
3. Shape factors — better than 2.0 for ratios of 60 db to 3 db
4. Bandwidth to center frequency ratio — up to 10%
5. Phase linearity — within 10° through passband
6. Low passband insertion loss
7. Better than 80 db attenuation 50% above and below center frequency
8. Input and output impedances as required
9. Low input and output impedances in stop band
10. Low passband ripple
11. L, C, and R elements only

HISONIC... pioneers in filter network design.

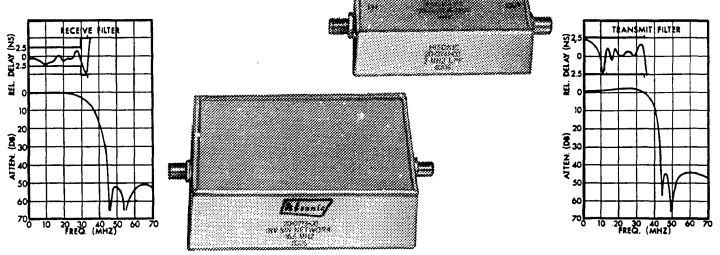
Communications are dependable only with quality components.

The staff at Hisonic, Inc. includes pioneer specialists with over 31 years experience in filter network design. It also includes mathematicians whose backgrounds of program development enable them to achieve design excellence in producing filters for your "out of this world" requirements . . . They use late generation computers, programmed to pre-test any design network. All types of packaging are available.

CUSTOM FILTERS

Modern Filters for Satellite Communication:

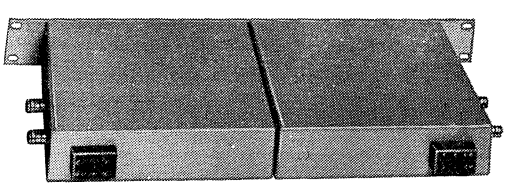
Special Attenuation shapes and controlled delay can be furnished to provide optimum transmission characteristics for TDMA Signals. BNC, SMA, or PC Terminations.



Telephone Interconnect Filters:

Base Group Interconnect 60-108 KHZ
P/N 20-0999-00

Super Group Interconnect 312-552 KHZ
P/N 20-0651-02



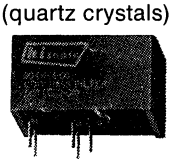
Base Band Separation Filters:

Supergroup 1-2	Supergroup 2-3
0-300 KHZ LP	0-552 KHZ LP
312-12000 KHZ HP	564-12000 KHZ HP
P/N 20-0998-00	P/N 20-0688-02

Many others available or we'll custom design. Let us know your needs.

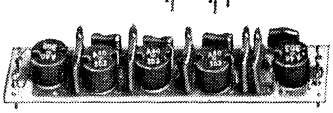
Many other Specialized Applications:

- Ultra-sharp transition characteristics (quartz crystals)
- Controlled Delay • Controlled Phase
- Special Attenuation Shapes



We Also Make:

- Conventional Filters
- Filters to MIL-F-18327



OTHER PRODUCTS: (Mil Spec & Commercial) Power & Precision Inductors • Transformers • Tuned Circuits • Amp/phase Equalizers • Lumped Constant Delay Lines

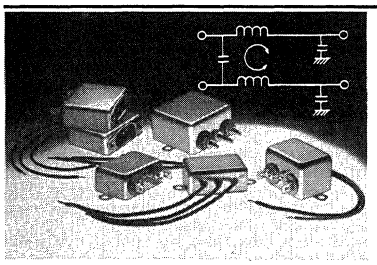
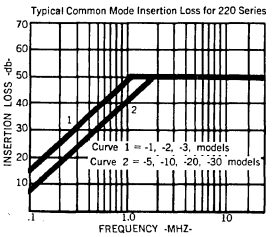
JMK INCORPORATED filters

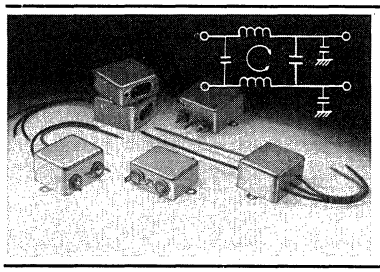
JMK has the filter just right for your power application. Whether it has to do with audio systems, lab test equipment, medical equipment, printers, power converters, video displays, modems, processors, cash registers, pinball machines, televisions, aircraft power supplies, or whatever your specific application may be, we have the filter.



220 Series

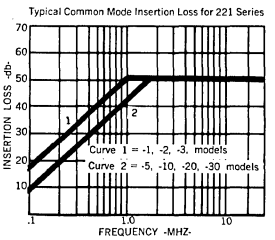
The 220 series is designed to give excellent filtering of "common mode," line-to-ground interference on computer-peripheral and other electronic hardware. Line-to-ground interference is the most common interference experienced and is generally the major source of "interference caused" malfunctions.

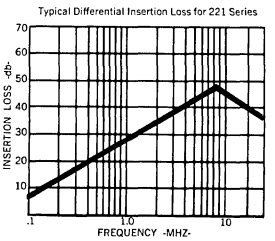


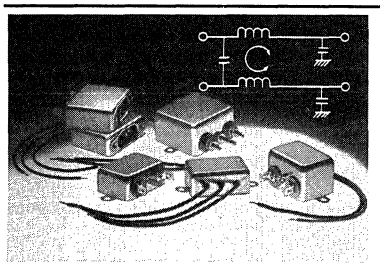


221 Series

The 221 series has the same "common mode" performance as the 220 series but the circuit has been modified to give substantial "differential mode" rejection of noise caused by switching transistors and power supply diodes.







223 Series

The 223 series in intended as an economical compromise between the 220 and 221 series. This filter has the same "common mode" performance as the 220 model with approximately one-half the differential attenuation of the 221 series.
